We're not saying everyone should own a Digi-View Gold...

Protozoa, for example, have very little need.

Only one product has captured the imagination of Amiga users around the world: Digi-View Gold. It's the most award winning, best-selling and most used Amiga hardware product of all time. When Amiga owners want to digitize graphics they use Digi-View Gold. Period. In fact, we've probably sold more Digi-Views than any other digitizer on any PC in history.

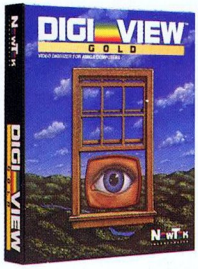
Here's your chance to bring the world into your Amiga. Simply focus your video camera on any object or picture, and in seconds Digi-View Gold turns it into Amiga graphics that glow with vibrant color and stunning clarity. Whether you are creating graphics for desktop publishing, presentations, video, or just for fun, Digi-View Gold makes dazzling images perfectly simple.

Digi-View Gold is designed specifically for the Amiga 500 and 2000, and plugs directly into the parallel port. With complete software control of color saturation, brightness, sharpness, hue, resolution, and palette, advanced image processing is as easy as adjusting the controls on your television.

Only Digi-View Gold:

- Has exclusive Dynamic HiRes mode for 4096 colors in HiRes
- Digitizes in all Amiga resolution modes from 320x200 up to 768x480 (full HiRes overscan)
- Uses 2 to 4096 colors (including halfbrite)
- Digitizes in 21 bits per pixel (2.1 million colors) for the highest quality images possible
- Has advanced dithering routines that give an apparent 100,000 colors on screen simultaneously
- Comes with an icon driven slideshow program for presentations using both IFF and Dynamic images
- Offers an unprecedented lifetime warranty and toll-free support line

If you want the best pictures possible on your Amiga, then you need the best selling video digitizer of all time: Digi-View Gold.



Only $199.95

Digi-View Gold is available now at your local Amiga dealer.

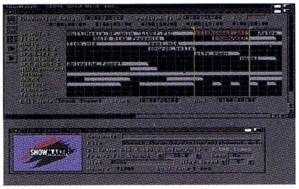
SHOWMAKER

EXCITING VIDEO PRODUCTIONS IN SIX EASY STEPS!

Business, Education, Presentation.

Whatever your message, bring it to life with ShowMaker. With ShowMaker and your Amiga, it's easy to combine graphics, animation, video, sound, and even animated titles to make your own video productions. Or live multimedia presentations. So whether you're creating the next Hollywood blockbuster or a sales or training tape, ShowMaker gives you the tools to make it happen. And it's as easy as 1, 2, 3...



1. SEQUENCE ANIMATION AND GRAPHICS

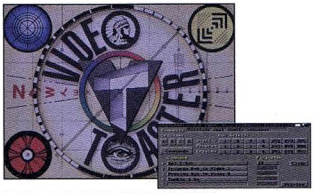
Simply drag out segments on ShowMaker's unique time-line interface. The length indicates the duration over which the the animation or graphic will play. ShowMaker automatically loads the files as needed, without interrupting the playback of the current animation. This means long running productions, limited by disk space, not RAM. ShowMaker also features dozens of built-in transitions, including wipes, fades, and dissolves, and is compatible with most ANIM formats.

2. ADD MUSIC

Create dynamic soundtracks just as easily. Just drag out segments to the lengths you want on any of the Music or Sound Effect Tracks. ShowMaker supports MIDI output, MIDI files, and SMUS formats. ShowMaker's unique auto-sync feature* ensures that your video always remains synchronized to the music!

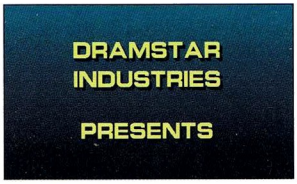
3. ADD LIVE VIDEO

ShowMaker gives you control over genlocks, videodisc players, and VCRs. Just tell ShowMaker when to cut in your video, and it will automatically seek to the correct position and fade in the genlocked signal at *exactly* the right time.**



4. TOASTER EFFECTS

If you have a Video Toaster, you *need* ShowMaker to bring out its full potential. ShowMaker lets you easily control the Toaster and integrate it's effects into full productions.



5. OVERLAY TITLING

Add titles to your production easily with ShowMaker's built-in video titler. You can even run titles on top of Amiga animations and graphics, and overlay the results on video. ShowMaker includes a collection of high quality video fonts and backgrounds.

6. PREVIEW AND EDIT

With ShowMaker you can preview your production at any time during its development. Then quickly and easily adjust, cut, copy, and paste tracks until your show is perfect. ShowMaker will even generate storyboards and cue sheets to help you visualize and fine tune your production.

PLAY IT!

You're done! Hit the play button and ShowMaker will play back your production in real time, automatically synchronizing the video, animation, soundtrack, and titling. A true multimedia presentation. Record your production to videotape for a *first generation Master Tape!*

ShowMaker is the first program with:

- Intelligent autoloading of animations and graphics*
- Animation playback synchronized to music in frames-per-beat*
- Video titling over Amiga animation and graphics
- Synchronized music and animation to external clocks (SMPTE/MTC)

ShowMaker also features:

- Complete control of genlock functions**
- MIDI command and file support
- Full ARexx support
- Wait-for-click interactivity
- Production looping
- Volume fading
- Storyboarding
- Cuesheet generation
- Use ShowMaker with AmigaVision
- Multiple wipes, reveals, and transition effects between animations and still pictures.

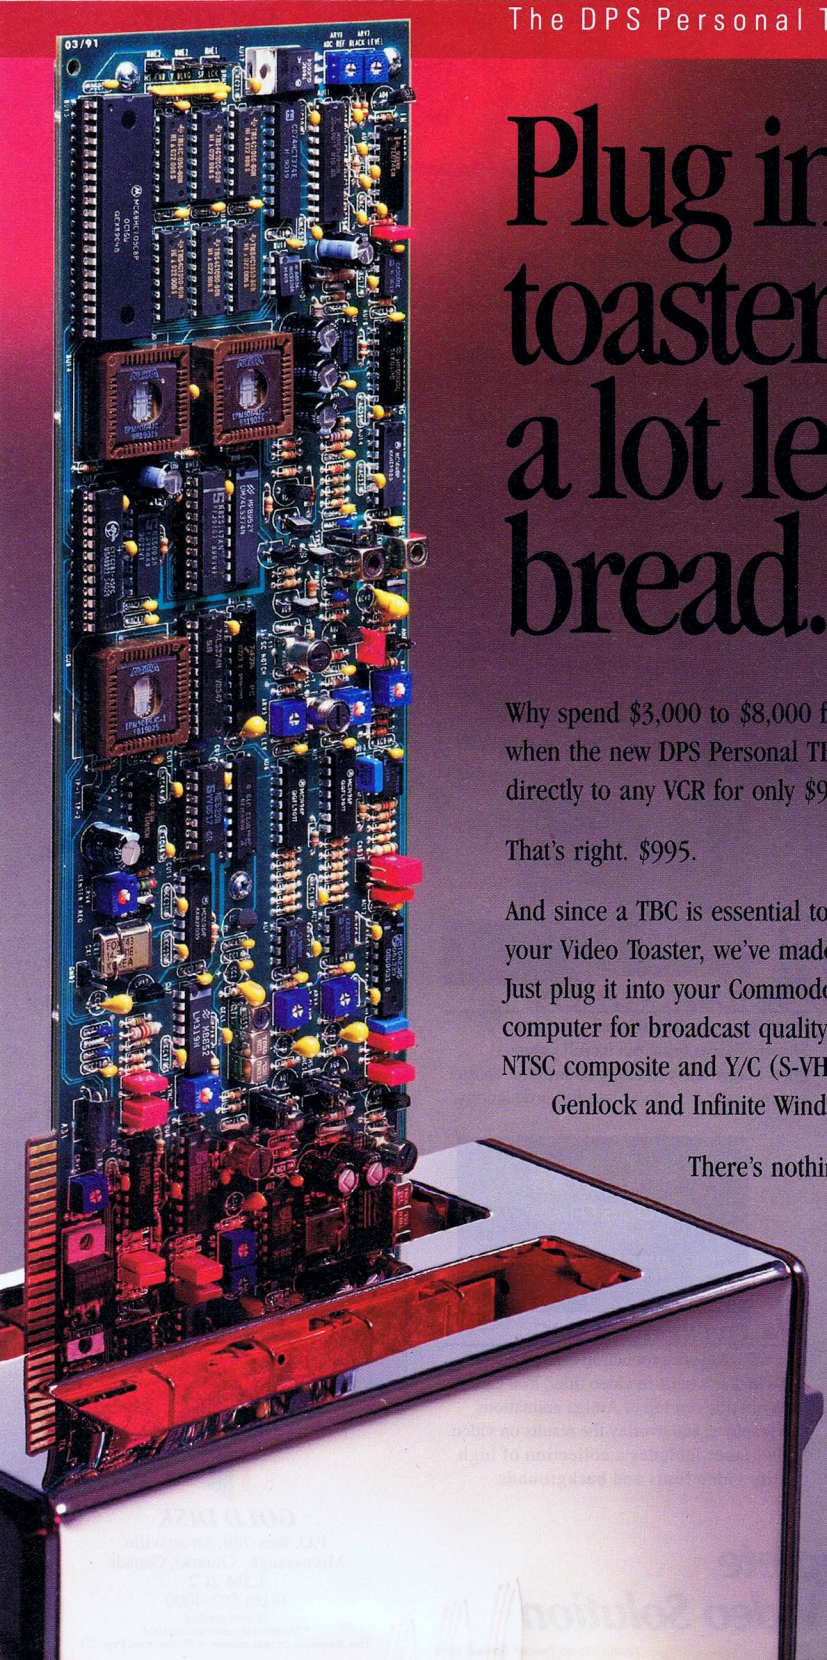
The DPS Personal TBC™ Only $995.



Plug into your toaster for a lot less bread.

Why spend $3,000 to $8,000 for Infinite Window TBC hardware when the new DPS Personal TBC™ card links a Video Toaster® directly to any VCR for only $995?

That's right. $995.

And since a TBC is essential to connect your VCR or Camcorder to your Video Toaster, we've made it as easy as it is affordable. Just plug it into your Commodore Amiga® or PC® compatible computer for broadcast quality time base correction. With both NTSC composite and Y/C (S-VHS or Hi 8®) video inputs, Genlock and Infinite Window timing correction.

There's nothing else to buy.

And no reason to buy anything else.

FEATURES

CDTV: BIRTH OF A NOTION?
By Doug Barney 20
With Commodore now rolling out its long-announced Amiga-based CD player, interactive multimedia may finally find a mass audience. Full details and a Buyer's Guide to CDTV titles in this *AmigaWorld Special Report*.

ARTICLES

ANIM TAMERS *By Gene Brawn* . . . 30
If your animation files are gobbling up precious disk-storage space and memory at an alarming rate, check out these 15 economical tips for "squeezing" ANIM files into more manageable proportions.

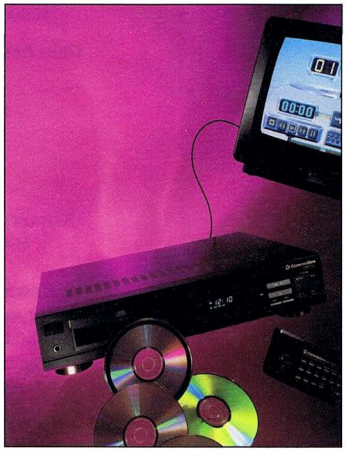
ANTIDOTE TO CHAOS
By Harv Laser 38
When it comes to inefficiency and waste in organizing system resources, the fault may lie, as Cassius pointed out to Brutus, "not in our stars, but in ourselves." Take the cure with these productivity-boosting hints, techniques, and handy utilities.

COLUMNS

CHIEF CONCERNS *By Doug Barney* . . 6
The Amiga Developers' Association is gearing up for its second year of operation with a new campaign to put the Amiga squarely on the map and in the forefront of advances in computer technology.

ACCENT ON GRAPHICS
By Joel Hagen 46
Joel zeros in on ASDG's new image-processing program, Art Dept. Professional, and shows you how to use darkroom-like techniques to enhance your screen images for presentation as finished artwork.

MASTERING MULTIMEDIA
By Mitch Wells 48
Applying good, sound design principles from typography and presentation graphics pays off handsomely when creating text screens for your multimedia shows.



Amiga CD in the comfort of your living room? Commodore's new A500-based CD system plays CDTV titles (see our Buyer's Guide), regular audio CDs, and the new CD+Graphics discs. Also this month: Tips, techniques, and programs for greater productivity from your Amiga.

DEPARTMENTS

OVERSCAN 8
We've rolled our coverage of news ("Headliners"), new products ("What's New?"), and the Amiga nets ("PD Prospector") into one new and larger monthly column. If it's new or if it's news, you'll find it all in "Overscan" each and every month.

***AW* SHUCKS!** 80
If we find that we've goofed on items in a previous issue, you'll see the correction right here.

HELP KEY 86
AW's Answer Man is always ready when it comes to solutions to your technical teasers.

***AW* PRODUCT INFORMATION** . . . 88
Information for contacting developers of products covered in each issue is now presented in one central "Manufacturers'/Distributors' Addresses" list.

THE LAST WORD 96
We've decided to give *you* the final say from now on. "Repartee" gets a new name, as letters from readers take over the back page each month.

REVIEWS

PROFESSIONAL PAGE 2.0
(Gold Disk) 14

New! Redesigned and FAAASTER

50MHZ 68030 POWER

Now Expandable to 32MB of 32-bit RAM!

1. Optional 3.5" IDE/AT hard disk up to 340MB capacity (13ms).
2. Built-in Autobooting IDE/AT hard disk controller.
3. 4MB to 32MB of 32-bit wide High Performance memory.
4. 50Mhz 68030 CPU and 50Mhz 68882 Floating Point Unit.

Our new faster and more expandable A3050 50Mhz accelerator kit will turbo-charge your Amiga 2000® beyond your wildest dreams.

Check out these features:

- ✓ Uses GVP's new custom designed 4MB, 32-bit wide, SIMM32™ memory modules with state-of-the-art 4MB, 60ns, DRAMs.
- ✓ ZERO SLOT SOLUTION! Even with a full-blown 32MB, 50Mhz, A3050 kit installed in the A2000's "CPU" slot, ALL ZORRO II expansion slots are left free for unlimited future expansion!
- ✓ Exciting new 3.5" hard disk "bundles". Choose between the 1" high, 120MB (15ms) model or the incredible half-height 340MB (13ms) model.
- ✓ Converts an A2000 into the fastest Amiga in the world. There is truly NO competitive product.
- ✓ 68000 fall-back mode for timing sensitive applications (e.g: some games).
- ✓ GVP is the world's leading manufacturer of accelerator products for the Amiga.

Beauty and Functionality Redefined

THE NEW IMPACT SERIES II™ A500-HD+

The Next Generation in Amiga® 500 Add-On Peripherals

IMPACT Series II

Turn your A500® into a Serious and More Fun Computing Tool Today!

GVP's New SERIES II A500-HD+ is The Ultimate in Hard Drive, Memory and Expandability for your Amiga 500. Major features include:

Leading Edge
Same high-tech custom VLSI and ***FAAASTROM***™ features as GVP's new Series II A2000 SCSI-RAM Products.

Foresight
Unique new "Mini-Slot"™ brings out all the A500 expansion bus signals, allowing for exciting future expansion options – the only intelligent alternative to risky "Pass-Through" functionality.

Reliability
Includes internal fan to keep you cool and robust power supply ensuring your A500 power supply will not be overloaded. GVP will not compromise on quality and reliability!

Memory Expansion
Internal RAM Expansion up to 8MB using easy-to-install SIMM memory modules.

Sleek
Custom injection-molded styling perfectly matches your A500 for unequaled beauty and elegance, setting a new standard for A500 peripherals.

State-of-the-Art
New 1"-high internal hard disk drive; available from 40MB through 100MB.

Performance
Provides no-compromise hard disk performance which until now has never been seen on the A500.

Seeing is Believing
Take one for a Test "Drive" at your nearest GVP Dealer today!

Call for Special End-User Trade-Up Details!

Take a Look under the Hood

1. **Game Switch:** Enables RAM while enabling full game compatibility.
2. **External SCSI Port:** Allows up to 7 SCSI devices to be attached.
3. **1"-High Factory-installed Hard Disk Drive:** 40MB through 100MB.
4. **"Mini-Slot":** For future expansion options.
5. **GVP's Custom VLSI Chip.**
6. **GVP's *FAAASTROM* SCSI Driver.**
7. **Internal RAM Expansion:** Up to 8MB
8. **Internal Fan:** Keeps you running cool.
9. **Dedicated Universal Input Power Supply:** Included.
10. **Reinforced 86-PIN Card Edge Connector**

CHIEF CONCERNS

Hip, Hip, ADA!

WHEN I GOT here a couple of years ago, the lack of respect for the Amiga got me hotter than a yuppie in a jacuzzi. Amiga users hadn't exactly stood still for this type of treatment. In fact, most had done their share of R&R (ranting and raving).

Unfortunately, all this energy lacked direction, and your complaints were all too easy to ignore. The situation clearly would not do.

So a bit over a year ago, the Amiga Developers' Association was launched as a concerted effort to correct the Amiga's credibility ills. In its first year, the ADA established itself as a legal organization in all 50 states, thus setting the stage for a long and hopefully glorious future.

A new board has recently been established, and its first meeting took place with the help of an AT&T operator and some of its swell conference-call technology.

This year's ADA board is raring to go. The new chairperson is Al Hospers, the energetic head of Dr. T's, the music software maker. The 1st vice-chairperson is Melissa Jordan Grey, who, as president of Blue Ribbon SoundWorks, has ignored competitive instincts to work alongside Al.

Our 2nd vice chairperson is Perry Kivolowitz, who, as head of ASDG, launched the acclaimed Art Department series and who happens to have great taste in Italian restaurants. The secretary is Debbie Miller, from New Horizons, of graphics software fame, and our treasurer is Jerry Wolosenko, of Psygnosis, the well-known game extremists.

Associate members of the board include Joe Lowery, of AMI Shows, Inc., Bob Wolter of Micro-Pace, and yours truly of *AmigaWorld*.

I'll be the first to admit the ADA is a small organization. The membership is tiny, the coffers nearly empty, and it lacks a professional support staff. But size isn't everything. Focus is. In order to be effective, the ADA has honed its focus into a single goal; to promote the Amiga. And in this, I believe the ADA will be remarkably successful.

The timing couldn't be better. First, the Amiga's ascendancy in multimedia and its penetration into the video fields have given the machine credibility. We've got Mac users drooling (more than usual), for goodness' sake! And the press has clearly taken notice.

Second, Commodore's new American chief, Jim Dionne, has already broadened distribution, added greater support for small dealers, and worked to lower the price and increase the prestige of the A500, which will turbo-charge that side of the market. Jim had the Amiga going gangbusters in Canada, and there is no reason he can't do it here, especially with all of us behind him.

And with CDTV about to blow, we've got the big boys like Tandy, Microsoft, and Philips on the run.

Finally, readers of Amiga publications have done their part. Nearly every day I get copies of magazines that include letters from readers demanding more Amiga coverage. A recent issue of *Publish!* ran one such letter and then pledged to cover the Amiga more aggressively. Hey, we've got these folks primed!

To maintain the pressure, the ADA is already at work on position papers to be sent to the computer press, and is putting together a major membership drive. It also plans to communicate with its members through a regular newsletter. But most of all, it plans to lobby for our system, so that a decade from now we can load DPaint 12, which will control our Video Microwave on our tried-and-true, 68090-based Amiga 18000.

For those interested in joining ADA, the commitment is fairly serious. The dues are $150 per year, and for that amount of cash you don't get an accelerator board, extra memory, or even a free subscription to *AmigaWorld*. Instead, when you take that leap of faith, you are investing in your market.

But dues are not the biggest burden. The ADA asks members to get involved: To help define this technology, round up innovative uses for profiles in mainstream publications, and nicely but relentlessly badger the unenlightened press until it gives the Amiga its due.

You don't have to join the ADA to help in this effort. On your own, you can write, call, or even fax publications that should, but don't, currently cover the Amiga. After all, aren't you dying to see DPaint 12?

If you would like to join the ADA, you can get an application and more information by writing:

ADA Membership Drive
c/o Jerry Wolosenko
Psygnosis
29 St. Mary's Court
Brookline, MA 02146

And to all those who have sent off letters on the Amiga's behalf, many thanks! ■

Doug Barry

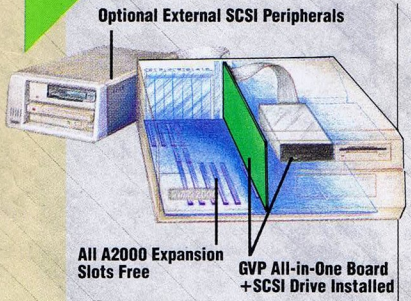
The Ultimate All-in-One Amiga® 2000 Add-on...

68030 POWER+16MB RAM+SCSI CONTROLLER

Replaces up to FOUR "normal" expansion boards!

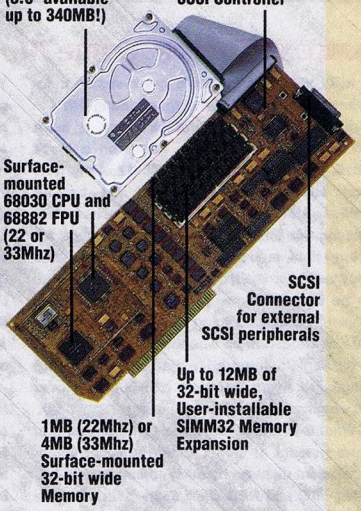
IMPACT Series II

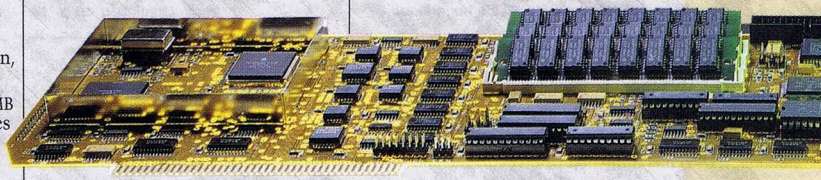
Now, a 22 or 33 Mhz 68030 accelerator board, up to 16MB of 32-bit wide RAM and a high-performance SCSI hard disk controller in a single A2000® "CPU slot" expansion board!



Check out these features:

- ✓ The perfect companion for NewTek's Video Toaster.™
- ✓ 22Mhz or 33Mhz factory installed, surface mounted, 68030 CPU and 68882 FPU.
- ✓ Up to 16MB of 32-bit wide memory expansion. 4MB minimum factory installed memory on 33Mhz version, 1MB minimum for 22Mhz.
- ✓ GVP's new custom 32-bit wide, 1MB or 4MB, SIMM32™ memory modules offer flexible, easy-to-install memory expansion. 22Mhz model has 1MB factory installed memory, expandable to 13MB. 33Mhz model has 4MB factory installed memory, expandable to 16MB.
- ✓ On-board high-performance "Series II" auto-booting SCSI controller with factory installed FAAASTROM SCSI driver and SCSI connectors for attaching both external and internal SCSI peripherals.
- ✓ Direct DMA access to the full 16MB range of 32-bit wide memory expansion by the on-board SCSI controller. Due to the A2000 bus architecture, this is ONLY possible when SCSI controller is placed directly on the 68030 CPU bus (as is the case with the A3000!). Provides ultimate SCSI hard disk performance!
- ✓ GVP's legendary FAAASTROM SCSI driver supports virtually all SCSI devices currently on the market, including hard disk drives, CD-ROM drives, Magneto-Optical drives, removable media drives and tape drives.
- ✓ Switch to 68000 mode by simply clicking on our new "68000 Mode" Icon, or include our special "mode switching" utility in your startup-sequence and select required mode each time system is rebooted, by holding down mouse buttons.
- ✓ Provides the ultimate expandability of your A2000 system. Plugs into the "CPU accelerator" slot, thereby leaving ALL FIVE A2000 expansion slots free for future expansion.





COMPARE:	A2000 +GVP All-in-One	Commodore A2500/30	Commodore A3000®

OVERSCAN

News, New Products and Networks

AmiEXPO New York: Fun, No Games!

NEW YORK, N.Y.—While green-vested celebrants indulged in shenanigans along 5th Avenue in honor of St. Patrick's day, a more subdued kind of fun was going on a block away. AmiEXPO, held March 15–17 at the New York Hilton, offered plenty of fun—but no games. Although market observers have witnessed the Amiga's upwardly-mobile trend for a long time, many could not quite believe what they saw: For the first time, *not one game* was to be found among the displays at an Amiga show! The closest thing to a graphics adventure or shoot-'em-up was the announcement of Oxxi/Aegis's interactive game-programming language, *Aegis Visionary* ($99.95), with over 60 commands specific to gaming. *(RS# 562).*

What took the place of the game demos that were present at earlier Amiga shows? Video-equipment displays by such companies as JVC *(RS# 551)* and NEC *(RS# 552)*—both of which were, appropriately, near NewTek's huge *Video Toaster* exhibit *(RS# 553)*. JVC Regional Manager Jim Turner told me that he was there mainly to check out the emerging Toaster-led Amiga video market and to see how JVC products can fit in.

ASDG *(RS# 559)*, betting on a great fit, is developing support for JVC's yet-to-be-released *BR-S605U* edit deck (scheduled to retail between $2200 and $2600) via a module for the Art Department Professional image processor. NEC was nestled in with Active Circuits, which has developed an Amiga interface for NEC's *PC-VCR*, a frameaccurate unit for creating and editing presentations and applications.

Active Circuits *(RS# 554)* also demonstrated a transportable *Video Arts Teleprompting System* in addition to two new modules for its *RasterLink* (formerly ImageLink) image-conversion software. One is *TGALink*, which allows control of Truevision's Targa and ATVista frame

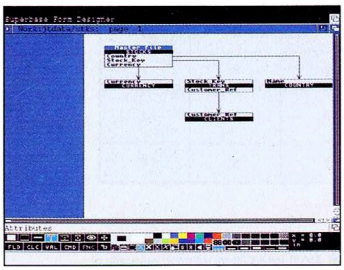
Continued on p. 12.

OVERHEARD

If, as Motorola claims, its 25-MHz 68040 processor is faster than Intel's 25-MHz 80486 processor, and if, as GVP claims, its 50-MHz 68030 board for the A2000 runs faster than a 25-MHz 68040, then an Amiga equipped with the 50-MHz 030 is faster not only than the fastest IBM PC or PC clone (which use the 25-MHZ 486), but also than the fastest Macintosh (which uses a 42-MHz 68030)! Zowie!

SBPro 4 Breaks Windows

The long-awaited **SuperBase Professional 4** ($495; upgrade from SBPro 3, $149) has finally stepped onto the showroom floor. This all-new Precision release has a MicroSoft Windows look. That's no accident, as SBPro 4 can now import and export .DBF (dBASE), .WKS (Lotus 1-2-3), and .XLS (MicroSoft Excel) files, read dBASE .DBF data directly, and output from existing dBASE databases *without conversion*.



SBPro 4's snappy new Forms Designer.

Precision's data-management giant has room for a whopping one billion records, and its text fields can handle 4000 characters. Other improvements include logical, real, long, and integer fields, more image formats, and a graphical labels facility. In addition, the program can retrieve and play sound samples as data, so you can incorporate voice mail or voice annotation in database applications.

The new Forms Designer—probably the flashiest change in the package—features optional rules and a snap-to-grid, WYSIWYG layout. The refurbished toolbox provides access to a wide range of object types and attributes. These include check boxes and "radio" buttons that you can attach to data fields or variables, and push buttons for executing command strings written in Superbase's Database Management Language (DML). —*JJ*

On Sale!

Concurrent with other changes in West Chester, Pennsylvania, these days, Commodore has slashed suggested retail prices of A2000- and A3000-series computers. Along with the CPUs, expansion-board prices also felt the knife.

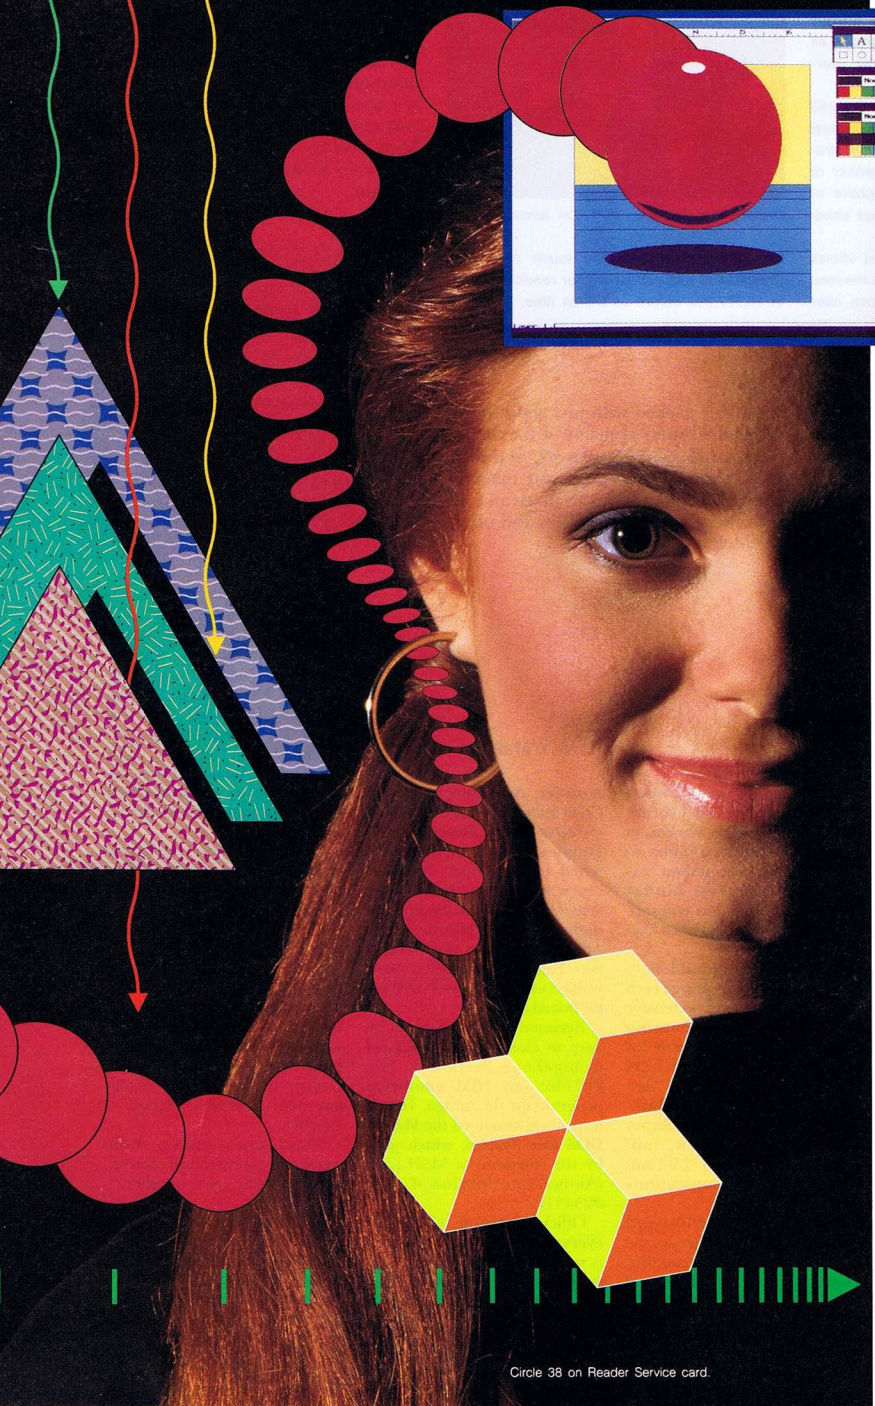
A stock *A2000* that sold for $1895 now sports a $1599 price tag. The *A2000HD* experienced the largest percentage price reduction in CPUs, with a drop from $2699 to $1999. Other markdowns include the *A2500/30* ($4699 to $3799), *A3000-16/50* ($3299 to $2999), *A3000-25/50* ($3999 to $3499), and the *A3000-25/100* ($4999 to $4699).

If you have been holding back from buying Commodore expansion boards, these reductions may change your mind: The *A2630* 68030 accelerator board that originally sold for $1999 is now $1799, and the *A2058* 8MB RAM board—populated with two megabytes—dropped from $649 to $349. The MS-DOS-compatible *A2088D* XT and *A2286* AT Bridgeboards went from $699 to $499, and $1599 to $799, respectively. Finally, the *A2300* internal genlock fell from $299 to $169, the *A2091* autoboot hard-drive controller dropped from $399 to $199, and the *A1680* 1200-baud external modem that once sold for $99 is now $59. —*JJ*

For information about the vendors of products mentioned, see "Manufacturers'/Distributors' Addresses" list on p. 88.

DESIGNWORKS. THE PERFECT CREATIVE TOOL FOR THE AMIGA MIND.

Unleash The Artist Within
No Natural Talent Required



Put DesignWorks To Work For You

If you've been looking for a fast, easy-to-use, high quality structured drawing program, look no further. Now you can unleash the artist within with DesignWorks, the structured drawing program designed for the Amiga mind.

Creativity In The Fast Lane

DesignWorks is built for speed. No longer are slow and cumbersome programs needed to achieve professional results. DesignWorks is the ultimate in simplicity, with a responsive interface and design set.

The Highest Form Of Self-Expression Is Now The Least Expensive

DesignWorks costs far less than you would expect from a structured drawing program with this much speed and flexibility. With a Bezier smoothing algorithm, unlimited numbers of drawing layers, flexible text handling system and user-definable multi-color patterns, you don't need to be a professional engineer or CAD programmer to achieve quality results. And high resolution printing means you get near-PostScript quality output from your dot matrix printer.

Stop by your local Amiga dealer to see DesignWorks in action.

Draw Your Own Conclusions

- Fast and intuitive structured drawing
- Create lines, rectangles, ovals, polygons, and freehand objects
- Smoothed (Bezier) curves
- Optional arrows on lines
- Duplicate, rotate, flip, and scale objects
- Text with multiple fonts, sizes, styles, and colors
- Import/export IFF pictures
- Automatically align objects relative to each other
- Automatic grid snap
- Group objects together
- Variable line thickness
- Customizable multi-color fill patterns
- Multiple drawing layers
- AREXX port
- Macros, when used with AREXX
- Magnified and reduced views
- Drawing up to 100 inches by 100 inches in size
- Up to 10 drawings open at the same time
- Inch or centimeter rulers
- Near-PostScript quality printing on dot-matrix printers, full 4096 color printing
- Complete printer control, including sideways printing
- Fully customizable
- Full support for Kickstart 2.0
- Requires Kickstart 1.2 or later and 512K of memory
- Suggested retail price: $125.00

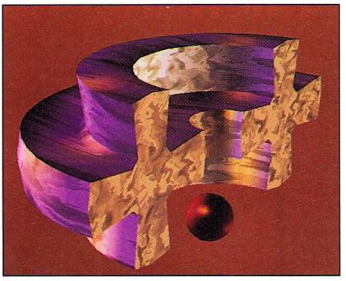
4-D Video

***Draw4D-Pro* ($349) is its name; structured drawing and animation is its game. Like its predecessor, Draw4D, Pro is designed for use in both desktop publishing and video. Its emphasis, however, is on video. This latest Adspec Programming offering saves IFF pictures in all modes from two to 4096 colors, in regular, overscan, and severe (ouch!) overscan.**

Adspec implemented features from Draw4D but added some enhancements: You can now use any IFF bitmap as a texture to wrap, project, or tile. You can also use any number of lights; assign color, intensity, and sphere of influence to lights; and assign Gouraud shading independently to any polygon.

The program's new eyepath control allows adjustment so that you get a through-the-lens view of the environment. You can then alter that environment with the touch of a key. Draw4D-Pro lets you save your rendered views in 16,777,216 colors as IFF-24 files. —*JJ*



Draw4D-Pro can save in IFF-24 format.

A Little Lunacy

There are a lot of *Lemmings* (Psygnosis, $49.99) in this game and they are incredibly proficient at getting into trouble. These hapless creatures climb, parachute, block, dig, and explode their way through 120 different levels while you keep them from doing away with themselves. The problem is that there are about 100 of them to begin with and more and more keep dropping in. Each level has a time limit, so you must keep your Lemmings busy. . .before it's too late. —*JJ*

Choose Your Battleground

Whether you are in the mood for one battle or an entire campaign, **Typhoon of Steel** ($59.95) has you covered. A sequel to the World War II adventure, Panzer Strike!, Typhoon of Steel lets you choose between the Pacific, Asian, and European theaters of war. Your arsenal is packed with just about every ground weapon available at the time—from tanks, tank destroyers, and artillery to trucks, mortars, and machine guns. The game provides maps and determines the types of battles and offensive/defensive missions. —*JJ*

OVERHEARD

Rumor has it that management at Egghead Software, a national computer chain, is considering clearing its shelves of Apple IIGS software and replacing it with. . .you guessed it, Amiga software. When *AmigaWorld* contacted Egghead, no comment was offered on the matter.

ON-LINE SCAN

by Tim Walsh

Beginning this month, the "PD Prospector" takes his pick and shovel upstream to join the news-and-new-products camp. In On-line Scan, *Telecom Tim will not only mention his top software choices from the online networks, but also broaden his coverage. As before, he will focus on the three major sources of public-domain software—CompuServe, GEnie, and American People/Link. Don't be surprised, however, to see an occasional spotlight on BIX or some other source.*

Seemingly every network is either getting ready to jump on the **9600-baud** bandwagon or has already done so. Hats off to CompuServe for taking the plunge first and adding 9600-baud modem support to about 30 nodes nationwide. Just type GO PHONES to find out the availability of 9600-baud nodes in your area. CompuServe is also serving up joint conferences between the MIDI Forum and the Amiga Arts Forum on alternate weeks. In addition, to help you reduce online expenses, a new **File Finder Amiga** (GO AMG) lets you rapidly locate Amiga files via a keyword search.

Programmers should note that CompuServe's AmigaTech area now offers an extensive four-part **C Programming Manual** by Anders Bjerin for downloading (CMAN1.LZH through CMAN4.LZH). Another hot download is **Backtalk 1.20** (AmigaUser Library 5, BT12.LZH), a new, full-featured AmigaDOS 2.0-compatible telecommunications package.

People/Link's 9600-baud support is almost sure to be ready by the time you read this. That's not the only news that has the network a-poppin', however. According to Amiga Chairman Harv Laser, Plink is giving away one **Firecracker 24** graphics board (generously donated by developer Impulse) every month to a randomly selected patron of the Wednesday night Graphics Forum in the Amiga area. As of this writing, two Forum participants have walked away with the $1600 24-bit boards.

Between graphics forums, be sure to check out **IBEM.LZH** (AmigaZone Section 4, File #27146)—an IBM emulation program for the Amiga. To run it, you will also need the **MessyDOS File System**, which goes by the filename of MSH.LZH (AmigaZone Section 4, File #25431).

Officials at GEnie tell me that everything but the paperwork is ready for getting 9600-baud support to the masses. Once it is in place, 70 nodes will be available for high-speed access. GEnie users may also want to peruse two new library areas: **Library 18**, entitled "Amiga Pictures: Digitized," and **Library 19**, called "Amiga Artwork: Drawn Images." The addition of these libraries allows GEnie to categorize and post more creations of Amiga artists.

One of the more intriguing and heavily downloaded files recently made available is OSNAP29.LZH (Library 4, File #10670. Written by Pierre Baillargeon, **Osnap 2.9** is far and away the best utility I have seen for lifting or "snapping" text from Shell windows and graphics from your Workbench screen. With a little practice, even Amiga novices can use Osnap to transfer virtually any item from one screen to another.

If you want to call any of the networks mentioned above, here are their voice numbers:

American People/Link: 800/524-0100

CompuServe: 800/848-8199: 614/457-8650 from Ohio

GEnie: 800/638-9636

If you have an idea...

YOU NEED SCALA

A Professional Presentation Package for the Amiga

GVP Professional SOFTWARE Series

How you present your ideas is as important as the idea itself. With a tool like SCALA your ideas will have the advantage they deserve.

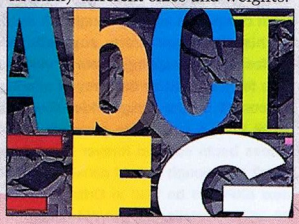
SCALA provides all the tools you need for professional presentations:

Backgrounds. Scala includes FIFTY-NINE professionally created backdrop images and textures, such as "Stone", "Marble", "Fabric", etc. THIRTY-NINE specially selected color palettes are included, allowing you to create unique and eye-catching background tapestries, adding character to your presentations. Backgrounds are stored

in IFF picture format (HAM also supported), allowing custom backgrounds to be easily created and added.

Symbols. Scala includes many useful presentation symbols such as, male, female, arrows, vehicles, etc. Symbols are stored as IFF brushes, allowing custom symbols (or other objects) to be easily created and added.

Typography. Scala includes SEVEN-TEEN fonts, each of which is available in many different sizes and weights.



Special effects such as tilting, underline, drop shadow, 3D and color can be applied to any individual letter, word or line. The video enthusiast will find several typefaces especially suitable for video titling purposes.

Transitions. Scala offers more than SEVENTY special effects transitions for control of transitions between pages of a presentation and how and when text, symbols or objects appear on a page. These transitions allow you to soften or accentuate changes and liven up your presentations. The speed of any transition and display times can be fully controlled.

Animations. Scala is able to load and play back animations at any point within a presentation. Text can be added and super-imposed on an animation while it is being played back.

Output. Transferring output to different media is no problem with a duo like Scala and the Amiga. Using well-known Amiga tools, presentations can be genlocked, recorded on video tape, printed on polaroids, etc. Scala includes ScalePrint which can print out a complete presentation or just a cue for your speech. PostScript printers are supported.

Other Features. Page layout and attributes can be saved and re-used later to ensure a consistent appearance within a presentation. ASCII files can be loaded and formatted onto these pre-defined layouts. Any object or part of a screen can be defined as a "button", allowing "run-time" selectable flow of presentations by the simple click of a mouse button. Mouse buttons act as a "remote control", allowing forward and backward control of the presentation or overriding display times.

• • • • •

SCALA, *Sophisticated yet Easy-to-use*

Scala represents a new generation in Amiga software due to its excellent user-interface and smooth performance. All Scala's features are accessible through three, clear and easy-to-use menus labeled in plain English. Scala is shipped with a comprehensive manual and EIGHT DISKS! MINIMUM CONFIGURATION. Scala requires Kickstart V1.3 (or later), at least 1MB of memory and a hard disk. Separate versions for PAL and NTSC.

Your ideas deserve SCALA!

Mandel Taught

Science fiction, the Titanic, the Mandelbrot set, the Amiga, and good reading. . .they're all here in Arthur C. Clarke's latest novel, *The Ghost from the Grand Banks*. Clarke spent hours exploring the Mandelbrot set on his A2000, and this research served as inspiration for much of the book.

The Mandelbrot set is based on simple mathematics and extends, via millions of equations, into infinity. While I had seen Mandelbrot plots before reading the book, I had no idea how these complex and stunning images (which often look like Paisley designs) were generated. *Ghost*, however, made the process apparent and interesting—even to a math buffoon like myself.

The novel features a race to raise the Titanic, a giant octopus, an interstellar probe, and a grieving mother who searches for her lost daughter in the Mandelbrot set. I'm not saying how this stuff fits together or how the story ends, but I recommend it! —*DB*

From p. 8

buffers via CBM's Bridgeboards, and the other is *CineLink*, which supports 24-bit output to film at 4000 lines using any of several recorders. Just down the hall, Computer Creations II *(RS# 577)* showed the results of its 4000- and 8000-line resolution *slide-imaging service*.

A number of video time-base corrector (TBC) manufacturers were boasting that their units "work with the Toaster!" Among these was Digital Processing Systems *(RS# 555)*, which demonstrated a $995 *Personal TBC* that fits inside the A2000. Across the way, Showline Video *(RS# 556)* spread news of its *Spectrum* series of SVHS/composite digital frame synchronizer/TBCs, ranging in price from $1295 for a single-channel model to the $2695 dual-channel unit. I.DEN Videotronics *(RS# 557)* countered with the *IVT-7* TBC, featuring SVHS, Hi8, composite in and out, and full-frame memory.

Key Interest

With the help of a genlock and video source, MicroSearch's *(RS# 558) ChromaKey* ($395) allows Amiga graphics to show through any part of a video picture that is colored blue. That's why MicroSearch reps appearing on the Amiga monitor seemed to be doing impossible stunts, while they were really only standing in front of a blue backdrop.

ASDG *(RS# 559)* announced new *drivers* for its Art Department Pro: one each for Impulse's Firecracker 24, Progressive's FrameGrabber, Black Belt Systems' HAM-E, and MacPaint on the Macintosh platform. In the ASDG booth, we also found a $1995 Epson ES-300C 600-dpi flatbed color scanner, as well as the $4500 Kodak SV6510 dye-sublimation printer so popular in screen-printing and novelty businesses. Not surprisingly, ASDG has just released drivers (at $200 and $250, respectively) for both units. ASDG also announced a driver ($200) for the $4495 Polaroid CI-3000 33-bit digital film recorder.

Although the show was heavy on graphics and video, there were a number of important audio products on display, including Beta Unlimited's *(RS# 560)* 16-bit processor for the A2000 *AudioLink*. AudioLink boasts 16 voices, sampling rates up to 48 KHz, MIDI support, and room for up to 16MB of memory.

SunRize Industries *(RS# 561)* displayed two high-resolution sampling boards for the A2000—the *AD1016* 16-bit unit, with its SMPTE time-code reader and digital I/O ports, and the *AD1012* card, which also has a SMPTE reader. Both boards are packaged with SMPTE- and ARexx-compatible software that lets you record to and edit from hard disk. SunRize also demonstrated its fast *Audition 4* sound-editing package ($99.95), which boasts eight real-time effects.

Aegis/Oxxi *(RS# 562)* announced its speedy new *Aegis SoundMaster* eight-bit stereo digitizer. At the opening of the show, the company officially released its $99.95 HAM paint-and-animation program, *SpectraColor*. The good news for owners of Microillusions' Photon Paint is that they can upgrade to SpectraColor for $49.95 plus shipping. Oxxi also announced its upcoming *TurboText* text editor, its *ScanMaster* 300-dpi 24-bit flatbed color scanner, and its *P-Stat* statistical-analysis package.

Onward, Aching Feet!

To facilitate all the high-end applications presented at the show, developers of traditional Amiga peripherals offered all manner of controllers, accelerators, super RAM cards—and much more. Many of these companies are taking off in new directions. GVP *(RS# 563)*, for example, showed off a *color scanner* and a *24-bit graphics board* (both still in development). The company also held demonstrations of its first software offering, the impressive Norwegian presentation package, *Scala*.

IVS *(RS# 578)* had the most attention-getting (and loudest) display: The company used Digital Creations' *DCTV (RS# 564)* to display a near-video quality film clip from hard disk in real time via its *TrumpCard Professional* controller. IVS also previewed its *Grand Slam* card that combines 8MB of RAM and a parallel connector with a SCSI hard card. Digital Creations, incidentally, announced a DCTV software upgrade (scheduled for release around June) to include an "undo" command.

New in the California Access *(RS# 565)* booth was the *CA-650* CD-ROM software interface that supports both SCSI CD-ROM drives and Amiga SCSI-direct hard-disk controllers. As for discs, it supports AmigaDOS, ISO 9660, and High-Sierra standards and thus allows use of IBM and Mac ISO compact discs in addition to standard audio CDs. California Access also joined the speedy elite with the announcement of its *Boogie Board* 33-MHz 68030 accelerator. Across the show floor, CSA *(RS# 566)* showed a preliminary version of its *68040* accelerator in addition to its *Mega-Memory* 19MB RAM board for the A2000.

Amidst more hard-disk controllers and RAM cards, the developer of the much-anticipated *Colorburst* 24-bit RGB graphics card was on hand to answer questions in the MAST *(RS# 567)* booth. ICD *(RS# 568)*, meanwhile, drew some wows for its tiny *Novia 20i* internal A500 hard drive ($695.95), which incorporates the firm's *AdIDE* controller.

Spirit Technologies *(RS# 569)* alluded to a forthcoming character generator, and gave details on its modular *Studio A* genlock, which allows you to add such things as color splitters or computer control to the basic NTSC ($795) or PAL ($925) unit. Roctec *(RS# 570)* also displayed an external NTSC/PAL genlock—the *Rocgen*. Roctec's *Rocknight* external anti-virus device stirred interest with its track-location display and warning system.

Among the many devices featured in Supra's *(RS# 571)* massive display were two new *SupraModems*: the 2400 MNP with error-checking, and the 9600-baud unit. The new *SupraRam 500RX* is a low-profile 8MB external memory expander with a pass-through connector for the A500. Computrol *(RS# 579)* engineered its tiny 8MB device with controller option to fit under the hood of the A500 (and A1000 and A2000 as well).

From Here to There

One booth that generated lots of interest was that of Black Belt Systems *(RS# 572)*. Attendees who made their way inside were treated not only to glimpses of the *Click Fax* 9600-baud fax modem, but also saw demos of the *HAM-E* 24-bit imaging device and its new software. In support of HAM-E, HoloSoft Technologies *(RS# 573)* introduced its *HAM-E Workshop* software.

A handful of European companies exhibited at the show, including Memory Expansion Systems *(RS# 574)*, with its 8MB *Cortex* external RAM expander for the A500 and A1000. Activa International *(RS# 575)* demonstrated its *CAPS XL* (Computer Aided Presentation System) multimedia software, which allows multiple users working on different platforms to set up presentations for cable television and in-house video systems. Both companies actively sought US distribution.

This show was pretty sophisticated. Any professional or aspiring artists or videographers who felt confused by the array of offerings were welcomed by the Amiga Video-Graphics Guild *(RS# 576)*, a nationwide nonprofit organization whose booth seemed forever busy. Those who didn't get enough should consider attending the next EXPO, to be held in Orlando, Florida, July 26–28. For details, call 914/741-6500. —*BG*

YOUR WISH IS OUR COMMAND!...

If you wish to enhance your Amiga 2000® with

MORE MEMORY, a HARD DRIVE, or BOTH

wish no more—GVP has the solution for you.

IMPACT Series II

Choose GVP's Series II RAM Expansion Board, SCSI Hard Drive Controller or SCSI+RAM Hard Disk Card. Realize the potential of configuring your perfect solution without any need for compromise!

RAM Expansion

SII A2000-RAM8/2: **The smallest and most compact 8MB RAM expansion board for the A2000!**

Features:

- ✓ 2MB of factory-installed RAM, expandable to 8MB.
- ✓ All memory fully Auto-Configured.
- ✓ Also supports 6MB configuration for maximum memory utilization for Commodore's A2088/2286 "bridgeboard" users.
- ✓ Uses easy-to-install, industry standard, SIMM memory modules. No more bent pins or incorrectly inserted DRAM chips!
- ✓ GVP's state-of-the-art VLSI technology has reduced an 8MB RAM expansion board to a "half-card"! This translates into a lower parts count and also means the highest possible reliability and life expectancy.

SCSI Hard Disk Controller

SII A2000 SCSI "Hard-Disk-Card": **Specifically designed for those users who don't need memory expansion but still need maximum hard disk performance at a budget price.**

Features:

- ✓ Incredible SCSI hard disk performance achieved through GVP's innovative new custom chip design.
- ✓ Supports virtually any SCSI device including: CD ROMs, tape drives, Bernoulli drives, removable hard drives . . .
- ✓ Fully implements Commodore's Rigid Disk Block (RDB) standard as well as the new DIRECT SCSI interface standard.
- ✓ Allows direct AUTOBOOT from Fast File System Partition.
- ✓ Simplest and easiest SCSI installation in the industry.

SCSI Hard Disk+RAM Expansion

SII A2000-SCSI Hard Disk+RAM-Card: **State-of-the-Art integration packs GVP's high performance SCSI controller, 8MB FAST RAM expansion and a 3.5" hard drive drive INTO A SINGLE A2000 EXPANSION SLOT!**

Features:

- ✓ GVP's new custom chip design provides DMA performance and unique direct dual port memory access to FAST RAM, eliminating typical DMA side effects under heavy graphics load.
- ✓ Easy-to-install SIMM memory modules allow flexible memory configurations for Zero through 8MB. Supports 6MB FAST RAM configuration for BridgeBoard users.
- ✓ Supports virtually any SCSI device.
- ✓ Allows direct AUTOBOOT from Fast File System Partition.
- ✓ Simplest and easiest SCSI installation in the industry.

REVIEWS

PROFESSIONAL PAGE 2.0

The features, they are a-changin'.

By Irene C. Kobelski

IT'S BEEN A few years since ***Gold Disk*** introduced Professional Page to Amiga desktop publishers, and the program has changed almost as much as hairstyles since the 1960s. Back in the old days, document output was limited. Then came version 1.3, with its Compugraphic fonts and full support for dot-matrix printers. Professional Page 2.0 ($395; $75 for upgrade) is chock-full of new features, making Gold Disk's ongoing commitment to this high-end desktop publishing package abundantly clear.

To appease the ever-growing demands of state-of-the-art desktop publishers, Gold Disk managed not only to pack the program with new features, but also to give the basic functions a new look. The newly implemented Menu Extended Select makes it fast and easy to experiment with different combinations of text attributes. Rather than waiting for one menu command to execute before choosing another, you can now select multiple menu items by simply holding down the right mouse button while making selections with the left.

You can also activate names in list requesters by double-clicking on them. If you prefer keyboard shortcuts, you will appreciate using the space bar to execute a screen refresh. Improvements like these mean that you spend less time thinking about the program and more of your time producing copy.

TODAY'S DESIGN

Heading up the list of added features is the long-awaited ability to rotate text and graphics. You can rotate any box to any angle by typing in numeric values or using the mouse. This feature gives the program a serious boost, eliminating the need to manually paste up copy requiring special text or graphics angles.

Two new page-display modes make checking a multipage layout a snap. You can now view facing pages of a document or see up to six pages at once in thumbnail representations. You can also view single pages at any of five available screen magnifications, ranging from 25 to 200 percent. Whenever you choose a magnification level too low to see text properly—as is the case with the special display modes—text will appear greeked (as patterns rather than characters). You can, however, change the threshold at which greeking occurs by selecting the minimum and maximum sizes for greeked text.

YOUR TURN!

Pro Page 2.0 has the potential to once again set industry standards in Amiga desktop publishing. However, unstable printing at 300dpi resolution and poor response from Gold Disk technical services make 2.0 an unacceptable program for producing "professional" documents on a laser printer. Talk to me when the program works as it should.

Jim Twining
Nashua, NH

The program now makes provisions for automatically inserting dates within a document. Likewise, you can add page numbers with a simple keystroke. Format options for both of these features appear on the Preferences menu.

Pro Page 2.0 supports color dithering, which means that it can display over 1000 colors on screen simultaneously. Via the Color Dither Mode menu, you can choose smooth, noninterlace or flicker-free dither.

Whether you are working with color or black-and-white graphics, the program is very flexible. You can import 24-bit IFF color pictures, bitmap graphics (in IFF format), HAM pictures, Aegis Draw and Aegis Draw Plus CAD structured drawings, Professional Draw clips, and Encapsulated PostScript Format (EPSF) graphics. Pro Page 2.0 also comes with tools for creating your own structured drawings.

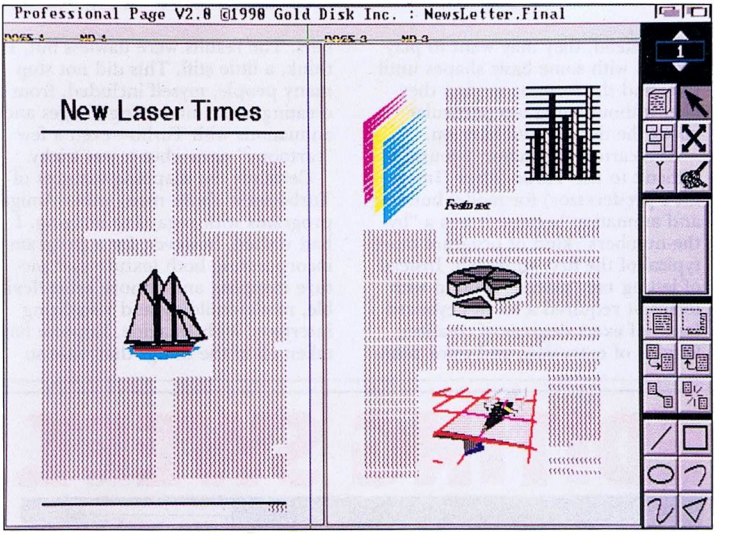
With the addition of the Pantone Matching System, you can output color separations or print to a color PostScript printer or slide imager. The Pantone system assures consistency in over 700 industry-standardized colors.

When actually preparing your document, it is often necessary to use several different combinations of typographical attributes. A typical magazine page may include headlines, subheads, quote boxes, and body copy, each requiring a different size font or particular line spacing.

To simplify an otherwise tedious procedure, Pro Page 2.0 lets you create Style Tags. Let's say that you always set your body copy in 12-point Times with a leading of two points, flush justification, and a tracking of 2. By defining and saving a Style Tag, you can invoke these attributes quickly, without having to select them manually each time. Since each Style Tag is saved with a specific name, it is possible to use multiple tags within a document. For viewing and printing purposes, you can assign different colors to the text affected by each tag.

Paragraph Tags let you define box margins, paragraph spacing, indents, tabs, and interword/character spacing

For information about the vendors of products reviewed, see "Manufacturers'/Distributors' Addresses" list on p. 88.



Greeked text makes for quicker layout with Pro Page 2.0.

(with flush-justified text only). For complete flexibility, Paragraph Tags can be linked to Style Tags or used independently. Best of all, these tags can be modified or deleted as you see fit.

Two Editors for the Price of One

Pro Page's integrated, on-screen text editor has always been useful for making quick changes or corrections, composing short blurbs, or writing headlines. For longer documents, you were better off booting up a separate word processor and importing the results. That was yesterday. Today, the program's new built-in word processor is at your disposal.

Unlike the on-screen text editor, the Article Editor is meant to handle bigger jobs. To compose a long document from scratch, you simply run the Article Editor from your Workbench disk. You can save files with or without special Pro Page formatting codes and import them later in the same way you'd handle documents from other word processors. You invoke the Article Editor from the Edit menu when Pro Page is operating.

Exploring the Article Editor turns up several features you might not expect. Among them are automatic upper- and lowercase letter conversion, extended cursor-key functions, and the ability to create macros. A quick cursor/keystroke combination lets you mark a long range of text without having to use the mouse. You can even save portions of a longer article as a separate file or insert a file on disk into your current article.

The Find/Replace command lets you locate specific words or phrases within your document. You can conduct a search from beginning to end, in addition to forward or backward from the current cursor position. You can search for upper/lowercase matches or perform wildcard and style-code searches. Finally, when multiple substitutions make using the Find/Replace operation impractical, Translation Tables (e.g. "PP" = "Professional Page") can be used to speed things up.

Invoking the Analyze feature brings up a screen displaying the word count of your document, the total number of characters, sentences and paragraphs, a word-length frequency histogram, and a readability index (the average number of words per sentence and the reading level of the text). This is a highly unusual—but welcome—feature.

The Article Editor includes a 90,000-word spelling checker, TransSpell, which you must load into memory. You must therefore have more than 2MB of RAM in order to use it while running Pro Page. Like the Article Editor itself, TransSpell is a stand-alone program.

Good Copy?

Professional Page 2.0 is a solid, reliable package. Those planning to use it in a professional capacity are strongly advised to invest in a hard drive and at least 2MB of memory. Though it will function on a 1MB Amiga, this necessarily sacrifices some of its conveniences. For example, you cannot load the hyphenation dictionary—nor the TransSpell module—while Pro Page is running. You may also get low-memory warnings, particularly when working with multiple bitmap graphics. But Pro Page is still worth the investment, even though its memory is limited.

It goes without saying that using a PostScript printer or Linotron with Pro Page will yield the best finished copy, but even a 9-pin dot-matrix printer can produce impressive results when using Compugraphic fonts.

The program manual is well documented and easy to follow, even for first-time users. To get you started, a tutorial video is packaged with the software. Unfortunately, it is not available to users who are simply purchasing the upgrade. If you run into any problems while operating the program, you'll find the technical-support personnel quite helpful.

Imagine

The program that asks the question: What if?

By Kelly Day

A MULTIDIMENSIONAL program such as Imagine ($350) from ***Impulse*** offers incredible possibilities to a 3-D artist. Imagine is complex. It is also clearly a great program, and it will take years for its full value to be realized.

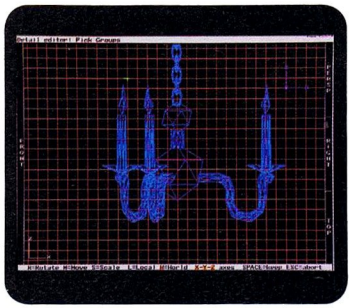
I think there are basically two schools of thought when it comes to 3-D modeling, and it is difficult for one program to encompass both. The first type of designer builds models and animates from a designed set of plans. For instance, industrial designers or architects might want to show their clients precisely what a product will look like and exactly how it will operate in near-actual situations.

On the other hand, cartoon artists/animators quite often may not have an exact idea of what a design will look like before starting to "sketch" it ►

out. Instead, they may want to play around with some basic shapes until they find the form or motion they like, without being too particular about the details until later on.

As a cartoon animator, I found it difficult to use Turbo Silver (Imagine's predecessor) for model building and animation because it was a "by-the-numbers" kind of program more typical of the first approach. Instead of letting me "mouse" around with forms, it required a lot of keyboard input of exact degrees of rotation, lengths of extrusion, and color numbers. The results were flawless but, I think, a little stiff. This did not stop many people, myself included, from creating some interesting images and animations with Turbo—even a few "cartoony" ones—but it was tricky.

Certainly the mapping features of Turbo set it above many other Amiga programs with regard to imaging. I had wished, however, for a program incorporating both texture and picture mapping and a more artist-flexible, model-building and visualizing interface. With Imagine, Impulse has taken all of the things that were so good about Turbo and put them into a program that takes many steps in my direction. In addition, Impulse added some very powerful features that were never at my Amiga fingertips before.



An object in the Detail editor awaits point selection.

In a nutshell, Imagine is a six-editor, modular program. The Project editor lets you name and define your 3-D enterprise (picture or animation), including such items as the number of frames, resolution of test traces, and so forth. With the powerful Forms editor, you can create wonderfully organic, amorphous shapes. The Detail editor allows you to select points by lasso, dragbox, and point-and-click, and it offers a wide array of tools for manipulating shapes.

When it comes to moving and shaking your images, the Cycle, Stage, and Action editors are at your fingertips. With the Cycle editor, you can pull out stick-figure representations of objects and their positions, set key frames, and then assign the actual objects to the stick segments—all contributing to easier, more realistic character motion. The Stage editor is where you put all your elements together for animation, while the Action editor lets you define the relationships between objects and plot their movements, as well as morph those objects and their attributes in almost any way imaginable.

The Best of the Bunch

Imagine includes so many great new features that I hardly know where to start, nor can I list them all, so I'll just point out the best. My favorite new tool by far is the Magnetism mode found within the Detail editor. It allows you to create "organic" shapes by pulling a wireframe around an object as if it were some kind of flexible chicken wire. By setting its parameters, you can adjust exactly how your magnet will influence a model. ►

EDITING SWEET.

With AmiLink/CI controlling your editing suite, there's only one more editing device you'll ever need.

Just a few mouse clicks and you're editing with AmiLink/CI, the new computer-based edit controller from RGB. AmiLink's intuitive, graphical software interface is a pure pleasure to use. It leaves the artist in you free to create!

AmiLink puts you right in the middle of the hot desktop video arena. It multitasks with your favorite desktop video software applications, and it controls most traditional devices too (Video Toaster upgrade available soon).

It's AmiLink's power that makes editing easy. With features that let you do insert or assemble editing, auto assembly from a list, park and perform or open-ended editing, edit point trimming, complete 999-event edit decision list management, and multiple list saves to disk, your pace will be fast and furious. But you remain calm and relaxed because now your computer does the work.

So you see, with all this power and simplicity, the only thing left to buy is the easy chair.

Call now for info: 1-800-535-7876.

AmiLink is compatible with all 5-pin or control-L and control-M VCRs. Multiple platforms supported. All products mentioned are trademarks of their respective companies.

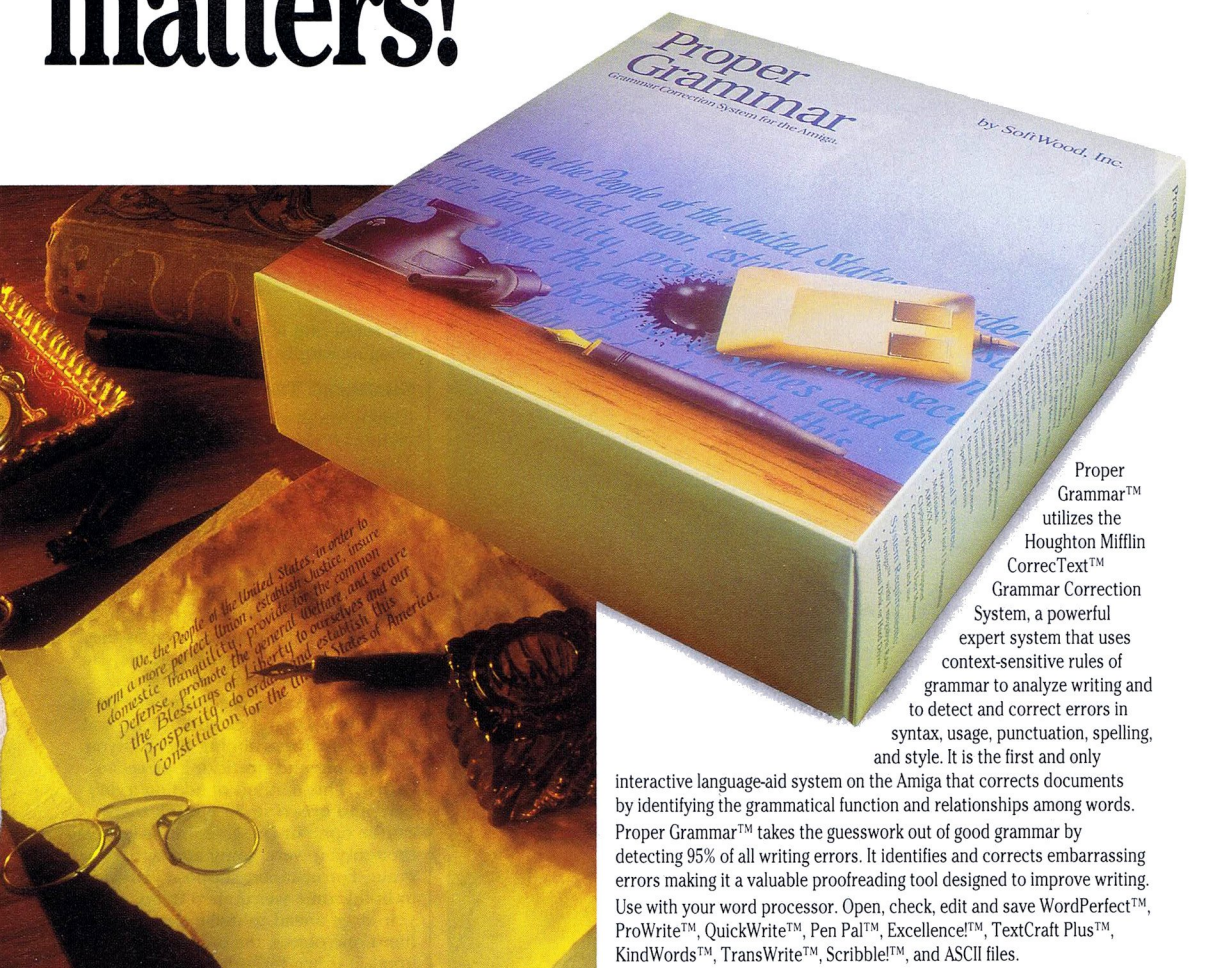
Makers of professional computer-based edit controllers for over 3 years

Circle 191 on Reader Service card.

For those moments when Proper Grammar matters!

$99.95



Proper Grammar™ utilizes the Houghton Mifflin CorrecText™ Grammar Correction System, a powerful expert system that uses context-sensitive rules of grammar to analyze writing and to detect and correct errors in syntax, usage, punctuation, spelling, and style. It is the first and only interactive language-aid system on the Amiga that corrects documents by identifying the grammatical function and relationships among words. Proper Grammar™ takes the guesswork out of good grammar by detecting 95% of all writing errors. It identifies and corrects embarrassing errors making it a valuable proofreading tool designed to improve writing. Use with your word processor. Open, check, edit and save WordPerfect™, ProWrite™, QuickWrite™, Pen Pal™, Excellence!™, TextCraft Plus™, KindWords™, TransWrite™, Scribble!™, and ASCII files.

System Requirements: Amiga™ with 1 megabyte RAM, and either a hard drive or 2 floppy drives.

For instance, you can adjust whether it will pull out a sharp ridge or a dull bulge, and then set how much of your model's area will be affected. For the first time, I feel I am actually "modeling" an object in 3-D as if it were wet clay, as opposed to chipping away at it like a piece of granite. This feature alone is worth the package.

Each editor in Imagine has a "fourth view" in hidden-line perspective that you can rotate independently of your normal work area, or "tri-view," so you can see odd angles when sculpting a form. There are also many helpful shortcuts that facilitate the process of getting your ideas on screen. For example, if you are working on an animated scene, Imagine allows you to preview small sections of your animation. This saves time because you don't have to sit through an entire preview rendering when you are fine-tuning one small portion (pretty smart!).

With the Forms editor, you can create all kinds of "organic" shapes by altering the profiles of a generic sphere. If you wish, you can do things like pull the walls of your object out to impossibly thin dimensions and then warp them in and out in a sort of sine wave pattern.

In the Detail editor, the Slice function lets you punch holes in your model as if you were using a 3-D cookie cutter. In general, Detail gives you more control over image size, depth, color, texture and other attributes than you can. . .well, imagine! Moving from object composition to animation, the equally powerful Cycle editor allows you to animate very complicated objects by manipulating much simpler stick figures made of little squashable diamond shapes. In the rendering and animation areas, Imagine simply can't be beat.

YOUR TURN!

Imagine is very powerful. It really is a great program and easy to use. The manual, however, is very poor. I am used to Sculpt, with its in-depth manual; there is just not enough tutorial with Imagine. You have to try it yourself and learn as you go.

Pierre Tavernier
Rock Hill, South Carolina

Changing Trains

Unlike Sculpt-Animate 4D, Imagine is mainly an object-oriented modeler. That is, the emphasis is on first deciding what you want to build and then figuring out how to build it from smaller, basic objects. This method works fine when you are building a model of something you can see. When creating something entirely new, however, you start by "sketching" the larger elements, such as the main portions of a figure and the size and mass relationships of its parts. Next, you break those larger elements down (in 3-D) and extrude them, scaling and reproportioning them as you go, sticking and unsticking pieces together. This method of adding a dab here and breaking off a hunk there can be done in Imagine, but it feels as though you were going against its grain. For instance, suppose you want to build some weird alien hand. If you forge ahead to make the whole hand one object, the only way to break it down for animation is to copy it over and over, each time deleting pieces until you're left with one

HITACHI

KP-C500
Small and Powerful

The Hitachi KP-C500 Series CCD Color Cameras ensure sharp, clear pictures with high sensitivity and excellent reproductivity without geometric distortion. The KP-C500 Series can be used for a wide range of industrial system applications utilizing automatic sensitivity adjustment, realtime auto white balance and ES lens output.

In addition, the KP-C500 boasts low light sensitivity to 10LUX which makes it superior in all applications where light levels are a problem.

FEATURES:
- 5 different models available
- Built-in 4-speed electronic shutter
- Free from external noise
- Realtime auto white balance
- No geometric distortion
- Long life and high reliability
- Excellent color separation
- 48 dB signal to noise
- Resistance to vibration and shock
- External sync capability
- RGB analog output

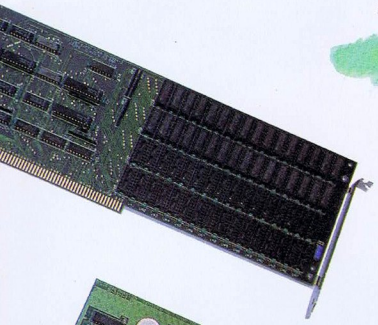
Out of Memory?

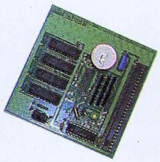
SupraRAM 2000

- 2, 4, 6, or 8MB FAST RAM board for Amiga® 2000 computers
- Easy to install & Easy to expand
- Uses 1MB x 1 DIP DRAM chips (120 ns. or faster)
- Zero wait states & Hidden refresh
- Four-layer board reduces noise and improves reliability
- 6MB configuration allows maximum benefit with the Amiga Bridgeboard
- Lets you run larger & more sophisticated programs
- Allows creation of large & very fast RAM disks
- Test mode & software simplify troubleshooting



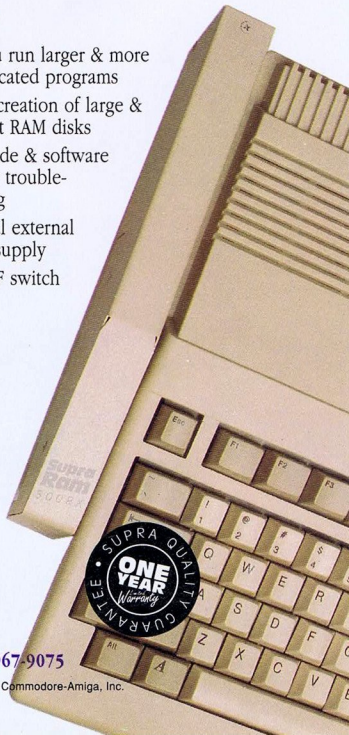
SupraRAM 500RX

- 1/2, 1, 2, 4, or 8MB FAST RAM for Amiga 500 computers
- Easily plugs onto A500 expansion port
- Amiga bus pass-through
- Easy to expand from initial configuration
- Uses 256K x 4 ZIP DRAM chips (120 ns. or faster) for 1/2, 1, & 2MB configurations; 1MB x 4 ZIPs for 2, 4, & 8 MB configurations
- Zero wait states & Hidden refresh
- Four-layer board reduces noise and improves reliability
- Lets you run larger & more sophisticated programs
- Allows creation of large & very fast RAM disks
- Test mode & software simplify trouble-shooting
- Optional external power supply
- ON/OFF switch



SupraRAM 500

- 1/2MB FAST RAM board for the Amiga 500
- Increases computer's memory to 1MB
- Battery backed-up clock/calendar remembers time & date even when your system is turned off
- Lets you run larger & more sophisticated programs
- Installs easily in A500 internal memory slot
- Comparable to Commodore A-501 board
- ON/OFF switch available



Available at your local dealer, or call: 1-800-727-8772

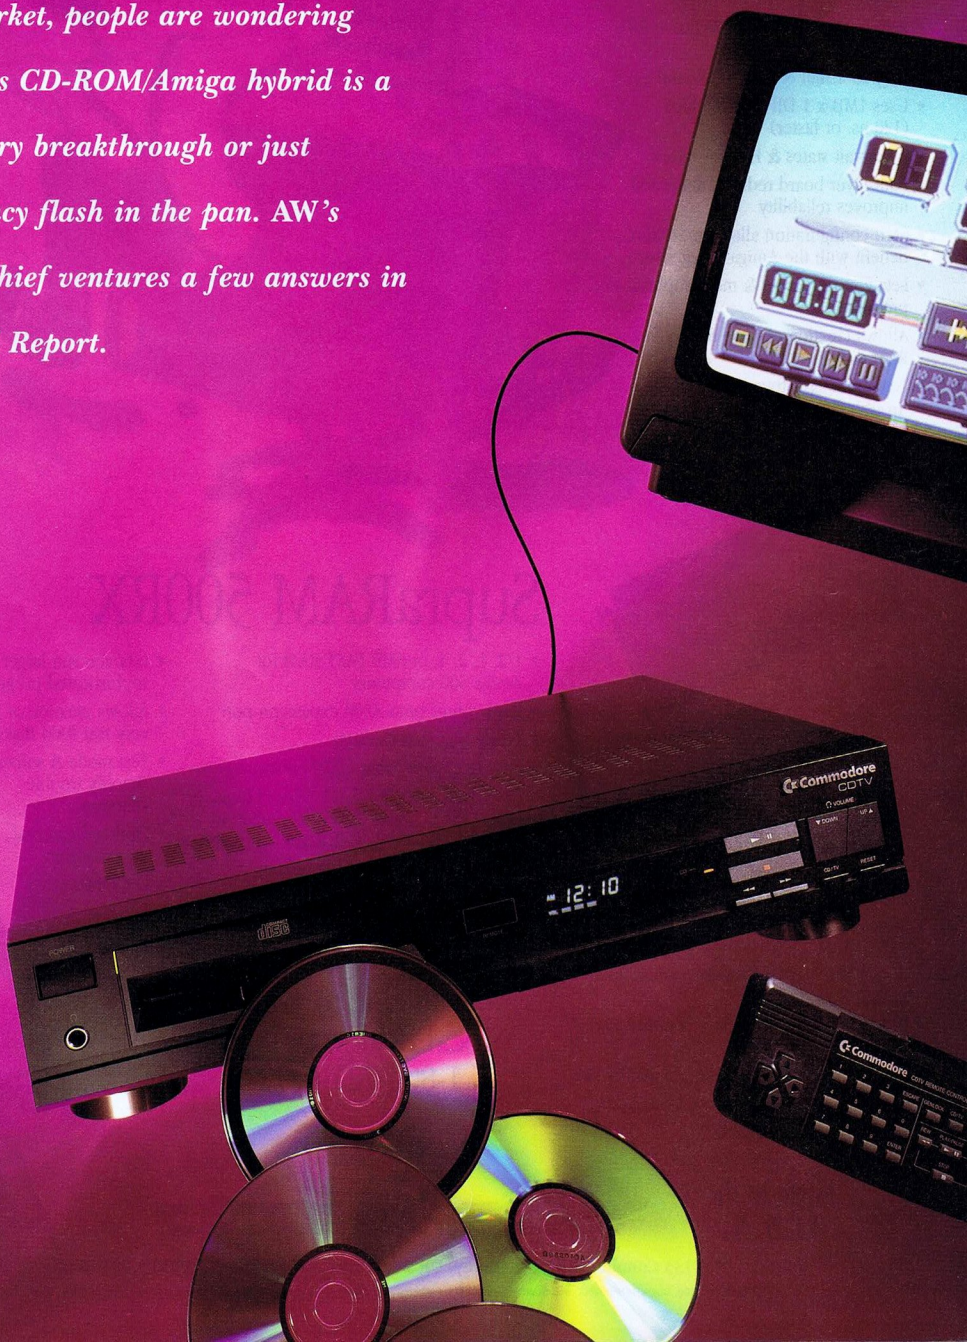
As Commodore's long-awaited interactive multimedia system for the home finally hits the market, people are wondering whether this CD-ROM/Amiga hybrid is a revolutionary breakthrough or just another fancy flash in the pan. AW's Editor in Chief ventures a few answers in this Special Report.



CDTV

BIRTH OF A NOTION?

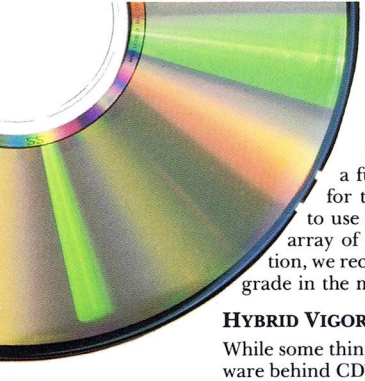
By Doug Barney

Like D.W. Griffith's seminal film 75 years ago, Commodore's CDTV could represent a similar pioneering effort in a different medium. The interactive CD-ROM system, which marries CD-ROM and Amiga technologies, just might be the ticket that raises "multimedia" from hyped-up buzzword to living-room byword.

It's taken the wizards from West Chester a while to deliver the goods: *AmigaWorld* first brought you the news about CDTV in an investigative story that graced the cover of our July 1990 issue (see "Million Dollar Baby," p. 18). Commodore called it "The Baby" then, and while 11 months is a tad longer than the normal human gestation period, the company finally began rolling out CDTV in selected markets just as we were getting this issue ready for press.

Throughout the long delivery, Commodore has been diligently refining (read "finishing") the product. Also during that time, the company lined up scads of developers (see the "Buyers Guide to CDTV Titles" accompanying this article), nailed down distribution through retailers such as Montgomery Ward and Macy's, set a suggested list price of just under a grand ($999), and, finally, polished off the product. ►

PHOTOGRAPHED BY ED JUDICE



In order to have enough time to do a full-scale, hands-on review of CDTV for this issue, however, we were forced to use a very late-model prototype and an array of equally late beta software. In addition, we received one final operating-system upgrade in the middle of writing the article!

Hybrid Vigor: Highlights of CDTV

While some things have been altered, the basic hardware behind CDTV (Commodore Dynamic Total Vision) has not changed much from what we described 11 months ago. It is still a CD-ROM player tied into a 7.16 MHz 68000-based A500. The front panel includes mainly standard CD functions (Play, Pause, Head-Phone Jack, and so forth), plus a port for the Personal RAM card (see the "CDTV Options and Accessories" sidebar). Meanwhile, the back is jammed full of ports and plugs that computer users around the world generally love to see. There are parallel and serial ports, a floppy drive, keyboard and remote mouse/joystick ports, audio out, MIDI in and out, and an array of video outputs, including RF, Composite color video, Digital and Analog RGB, and S-Video (supporting PAL and NTSC). Also on the back are a DMA expansion slot and a video slot.

The system still comes with one megabyte of RAM, which limits the amount and quality of either animation or video, but keeps the price down to a reasonable level.

Although CDTV uses the tried-and-true A500 as its base technology, it is shockingly and purposely unlike any computer ever made. As you can see from the photo on the opening page, the physical device is decidedly uncomputer-like. A key difference is the 28-button hand-held remote device that handles all control functions. Unfortunately, its four-button cursor does not allow for the fine control possible with a mouse, making intricate menus and drawing out of the question. (Commodore will, however, offer a remote-control mouse later this year—see the "Options" sidebar.)

In general, the remote device offers fewer choices, and it will take a bit more time to achieve the desired result. But those intimidated by the complexity of a VCR, or scared stiff of computers, will appreciate the total shielding of all computer elements.

With the remote, users also gain tremendous freedom. There is simply no cord binding you to your computer. When you sit back in that easy chair, soda in hand, and start moving through screens, the advantages really sink in.

Another advantage of CDTV is its ability to play the rare (there are only about 30) but interesting CD+G (Compact Disc Plus Graphics) discs. These CDs include graphics that are played on a television. We're not exactly talking rock video here, but the images do add flavor to the musical content. Currently available titles include Fleetwood Mac's "Behind The Mask," Little Feat's "Hoy, Hoy" and "Representing. . .," "Jimi Hendrix Experience: Smash Hits," Bonnie Raitt's "Green Light," and Talking Heads' "Naked"—with a little classical, folk, and jazz thrown in as well.

For playing standard CDs, Commodore has added a slick graphical interface. You control the CD by poking buttons on the remote device. Then you see an animated representation of the portion of the CD that is played. In addition to programming the sequence of cuts or skipping through tracks, the interface gives you the ability to preview the first ten seconds of each song, as well as to control the CD+G and CD+MIDI function. By the way, the MIDI func-

Continued on p. 28.

CDTV Options and Accessories

TO MAKE CDTV more useful and more versatile, Commodore plans to introduce a number of special accessories throughout 1991. Perhaps of most interest to current Amiga owners will be the one scheduled to appear first, which is also the first item on the following list:

A690 CD-ROM Drive — Already exhibited at CES and carrying a $699 suggested retail price tag, the A690 should be shipping not long after you read this. It attaches to the A500's expansion bus and plays any compact disc, including CDTV. Commodore is also supposedly developing interfaces for the A2000 and A3000 so that these systems can run the drive sometime in the future.

Video Genlock Card — Allows you to combine CDTV visuals with video from a video camera, videotape, or live television. You can switch among video-only, CDTV-plus-video, and CDTV-only genlock modes. There is already a genlock button on the standard CDTV remote control.

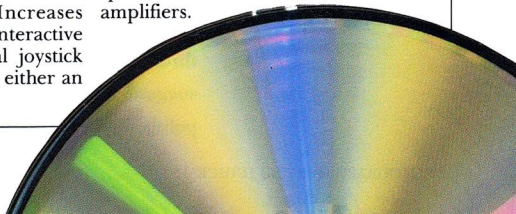
Remote-Control Mouse — A two-button model that provides real mouse control over the CDTV player without wires or cables. Will allow the kind of control not presently available when operating CDTV painting and drawing titles.

Trackball Controller — Increases speed and control for fast interactive multimedia titles. Has dual joystick connectors and operates by either an infrared remote control or a plug-in cable that is provided.

Personal Memory Card — Provides an easy way to save information for later use for such CDTV titles as games (save a position), paint programs (save an image), and reference discs (save a text excerpt). In 64K and 256K versions.

Game Controller — An infrared transmitter "brick" with ports for wired joysticks.

Bookshelf Speakers — For better sound quality, this pair of stereo speakers comes with built-in audio amplifiers.



So What "Titles" Are on "Disc?"

RIGHT. REMEMBER, THEY don't call them programs—they're titles. And it's a "c" not a "k" on the end of dis round thing I'm holding between my fingers.

Because developers were scrambling to put the finishing touches on many of the titles in time for the CDTV roll-out, I was able to sample only a small number of applications (but quite a larger number of standard CDs—all of which played quite nicely). Besides the seven discs reviewed below, there are descriptions in the buyer's guide of nearly 25 other current titles, plus a list of over 50 additional titles announced for later in 1991.

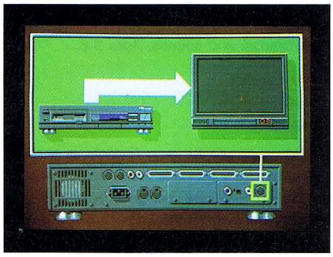
Playing CDTV titles is the opposite of using standard computer software. Most computer software waits for the user to provide data and then helps to sift, manipulate, and form the information. CD-ROM "software" provides the information, which the *user* can then sift, manipulate, or form.

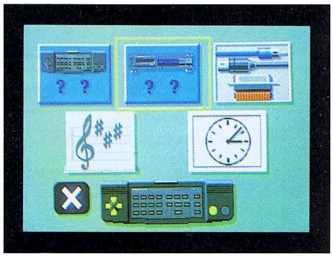
The first disc you'll play is a freebie. In fact, it's actually the CDTV documentation. Not knowing that at first, I called Commodore's Gail Wellington to ask about docs. She replied, "Look in the box for **The Welcome Disc**."

Sure enough, it tells you—through images, animation, sound, and words—what CDTV is all about and how it works. This is the perfect approach for a living-room computer, because you would probably wind up throwing out the manuals with old copies of *Sports Illustrated* and *Cosmo* the next time you cleared off the coffee table.

Next on my trial run—and one of the best of my tiny bunch—was **World Vista Atlas** ($79.95) from Applied Optical Media. Similar to PC Globe for the IBM and Mac, World Vista teaches geography in a visual, interactive manner.

Unlike PC Globe, however, which uses conventional computer-style pull-down menus, World Vista uses a friendlier, kiosk-style interface. Instead of computer-generated, undetailed maps, it offers actual scanned maps the user can navigate through. More importantly, World Vista adds the richness of sound, which helps teach about different cultures through music and language. The cultural side





Even the documentation for CDTV is a CD—an interactive tutorial called *The Welcome Disc*.

is topped off with photographic images of the country along with descriptions of what you are seeing. It is obvious that Applied Optical took full advantage of CD-ROM's half-gigabyte-plus (550MB) mass-storage capacity. In human terms, that means that a single disc can store up to 250,000 typewritten pages!

Also in my personal CDTV starter kit was Xiphias' **American Heritage Illustrated Encyclopedic Dictionary** ($69.95), which was not quite as suited to the CDTV remote device as World Vista. For applications such as this, a remote keyboard (promised by Commodore sometime in 1991) would be a welcome addition.

The 3000 color illustrations, automated word pronouncer and speller, and "hot-word" reference feature, however, all make good use of the strengths of both CD-ROM and Amiga-graphics technologies. The results are fuller, richer definitions of more than 180,000 words.

Fun and Games, Too

To keep our hard-charging reporter from getting bored, Commodore sent **Airwave Adventure: The Case of the Cautious Condor** ($49.95) from Tiger Media. This adventure game was designed from the ground up for interactivity and takes excellent advantage of CDTV's sound capability and storage capacity.

You have 30 minutes to solve a murder mystery on board the maiden voyage of a 1937 luxury liner. With countless story possibilities and myriad images, however, it is a game that can be played over and over in many different variations.

For the younger set, there is Multimedia Corp.'s **A Bun for Barney** ($49.95) title (and, remember, that's "bun" not "pun"). Narrated by Tom Baker, who plays Dr. Who on the PBS show of the same name, this is a terrific animated interactive children's book. Users (ages 3–6) can choose to simply go through the story or to combine the story with games. Choosing the game style, the child can move the pointer to various parts of the screen to make bears pop up, birds flutter, and squirrels appear, or to invoke simple and fun guessing games. The imagery is first-rate, the interactivity excellent, and the sound even better.

Back on the reference side, **Dr. Wellman: Family Health Adviser** ($79.95) from Commodore's own CDTV Publishing unit, is an interactive primer on health. Although the program lacks the depth of a *Gray's Anatomy* or *Merck Manual*, it is quite easy to push-button your way to a better understanding of medical matters and to better health for you or your child. It includes information on traveling to various countries, exercise, first aid, alternative medicine, and many more health topics.

From Xiphias' **Time Table of History** series, **Science and Innovation** ($59.95) makes excellent use of the Amiga's and CDTV's image handling. One can explore economic trends through simple graphs, read about the Big Bang, reminisce about the 1977 launch of the Commodore PET, put the Babylonians in historical perspective with a timeline, or see the famous photograph of the young Chinese student who stopped a tank on its way to Tiananmen Square. Audio presentations for key events and "hot-word" interactive referencing further enhance the program's appeal. □

—DB

Buyer's Guide to CDTV Titles

The titles presented here are currently available or slated to appear by the time this guide is published. A brief list of other titles expected later on in 1991 is also included.

A list of CDTV developers with addresses and phone numbers is also contained in the guide. In addition, you may contact Commodore (see under "CDTV Publishing" in the list of CDTV developers) for product and ordering information about any of these titles.

Titles are grouped under five major headings: Arts & Leisure, Education, Entertainment, Music, and Reference.

ARTS & LEISURE

Advanced Military Systems
Dominion Software
$39.95

For the armchair warrior, the newest and most advanced military hardware is featured in over 1500 action photographs accompanied by music and narration.

Women in Motion
On-Line Entertainment
$49.95

Photography genius and motion-picture pioneer Eadweard Muybridge's Women in Motion is an encyclopedia of movement based on some of the great historic photos of the 19th century. You can examine each frame of animation, print it, or load it into a paint program.

EDUCATION

A Bun for Barney
Multimedia Corp.
$49.95

Featured in the "Titles/Disc" sidebar.

Barney Bear Goes to School
Free Spirit Software
$39.95

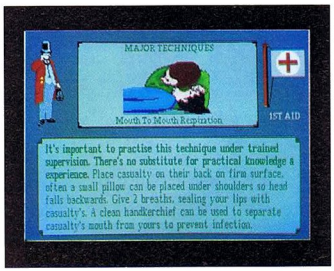
A two-part learning game that combines colorful, animated graphics and "multitrack" sound. Includes spelling and counting games, color and shape identification, and a coloring book. *Ages 2–6.*

Fun School 3
Database Educational Software
49.95

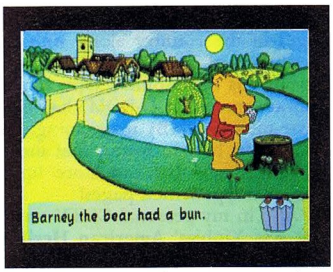
Consists of six educational activities that help to develop many skills, including number, shape, and word recognition. Colorful pictures, animations, and sounds. *Ages 3–5.*

LTV English
Jeriko
$49.95

Helping people to learn English as a second language, LTV provides more than 30 situations and 150 exercises designed to improve oral comprehension for many levels of competence. *Teens through adults.*



***Dr. Wellman:* First-aid remedies and health tips.**



Preschoolers should get a kick out of CDTV, too.

Mind Run
CDTV Publishing
$39.95

An entertaining interactive set of exercises to test your intellectual aptitudes and to sharpen your capabilities in memory, stress, listening, reflexes, logic, and understanding of machines. *Children, teens, and adults.*

Mud Puddle
Discis
$49.95

In order to escape the mud puddle that is chasing her, Julie Ann must outsmart it. A kinder, gentler approach to inculcating the values of cleanliness and tidiness. *Ages 6 and up.*

My Paint
Saddleback Graphics
$39.95

An easy-to-use, classroom-tested paint program based entirely upon intuitive symbols. Features include colorful animated symbols for all tools, a "coloring" book of over 100 pictures, sounds, special effects, and more. *Ages 3–9.*

The Paper Bag Princess
Discis
$49.95

A fairy tale with a contemporary twist: The princess is the heroine who saves the prince from the dragon. Being a modern couple, however, they don't live entirely happily ever after. *Ages 6 and up.*

Scary Poems for Rotten Kids
Discis
$59.95

Traditional fears of the dark or of monsters are not the only ones faced by today's children. Environmental dangers, war, and the like are also part of the new things that "go bump in the night"—as these poems will attest. *Ages 8 and up.*

The Tale of Peter Rabbit
Discis
$59.95

Beatrix Potter's universally loved tale of naughty Peter's escape from Mr. McGregor's garden has a timeless appeal for all small children—and many adults! *Ages 5 and up.*

Thomas' Snowsuit
Discis
$49.95

Getting Thomas to put on his snowsuit was an impossible task for all the adults, but he quickly jumps into the suit when a friend comes to invite him out to play. *Ages 5 and up.*

ENTERTAINMENT

All Dogs Go to Heaven
Merit Software
$49.95

Transform your TV into an electronic coloring book with 30 coloring-book pictures, spoken words, and songs telling the story of Don Bluth's roguish German Shepherd, Charlie B. Barkin.

The Case of the Cautious Condor
Tiger Media
$49.95

Featured in the "Titles/Disc" sidebar.

Classic Board Games
Merit Software
$49.95

Chess, checkers, and backgammon vs. a human opponent or your CDTV player—at several levels of difficulty.

Psycho Killer
On-Line Entertainment
$49.95

An interactive thriller game with real actors and a live locale. Play well. . .or else!

Snoopy: The Case of the Missing Blanket
The Edge Interactive Media
$49.95

Help Detective Snoopy find Linus' missing blanket in this interactive cartoon game.

Wrath of the Demon
ReadySoft
$49,95

This 3-D graphics adventure pits you against the Demon to save a princess and her father's realm.

Xenon 2: Megablast
MirrorSoft
$49.95

A remixed, remastered version of the arcade hit Megablast in full "3-D sound."

MUSIC

Music Maker
CDTV Publishing
$49.95

Learn to play music in minutes—with 17 song tracks and more than 40 instruments. Three different skill levels.

REFERENCE

The American Heritage Illustrated Encyclopedic Dictionary
Xiphias
$69.95

Featured in the "Titles/Disc" sidebar.

Complete Works of Shakespeare
Animated Pixels
$49.95

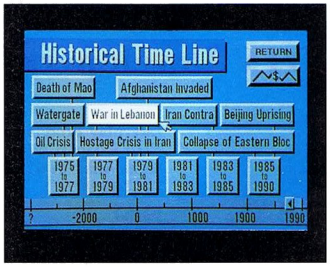
All the Bard's plays, poems, and sonnets collected on one disc—with illustrated scenes from original woodcuts. Reference utilities include an automatic word/phrase look-up and a complete concordance.

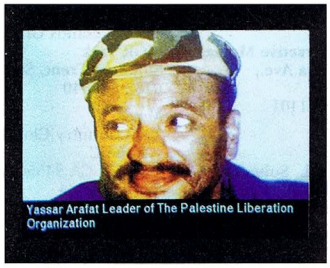
Dr. Wellman Family Health Adviser
CDTV Publishing
$79.95

Featured in the "Titles/Disc" sidebar.

Fred Fish Collection
HyperMedia Concepts
$69.95

The entire 410-floppy-disk Fred Fish library of freely distributable Amiga software on one CD. More than 46,000 separate files.





***The Time Table of History* uses pictures, text, and sound and lets you zero in on events with its timeline feature.**

The Illustrated Holy Bible
Animated Pixels
$49.95

The complete texts of the Old and New Testaments with full-color illustrations. Includes a slide-show option and search facilities.

The New Basics Electronic Cookbook
Xiphias
$59.95

1800 entries from the Silver Palate library of recipes—with more than 450 full-color photos.

Time Table of History: Business, Politics, and Media

How Does The Competition Measure Up Against ProWrite?

They Come Up Short.

ProWrite®. Performance That Stands Out In A Crowd.

In this highly competitive world, there is always a leader. An innovator. The one that the competition looks up to. In the world of Amiga word processors, ProWrite is that leader.

ProWrite has the high performance features you need. A 100,000 word spelling checker that can check as you type. A thesaurus with over 300,000 cross references. Multiple columns with both snaking and parallel text flow. Multiple fonts and graphics. Powerful macros. Exceptional speed.

With all this and more, ProWrite stands head and shoulders above the competition. Which is why ProWrite is the best selling Amiga word processor. And the best choice for every Amiga owner.

Because it is always better to lead than to follow.

Look To The Leader In Amiga Word Processing.

Like all of our products, ProWrite combines high performance, an intuitive environment, and easy to use commands. When it comes to powerful yet practical word processing, ProWrite is the target the competition shoots for.

So whatever your word processing needs, from A/V scripts, to novels, business reports, storyboards, or letters to Aunt Agnus, go straight to the top. Discover the power of ProWrite from New Horizons.

Circle 78 on Reader Service card.

From p. 22.
tion is a new addition to the original design, allowing MIDI devices to input to CDTV and vice-versa.

Out of the Box. . . and into the Chair

There are several options for hooking up CDTV. If you have an existing stereo monitor, you can simply plug in your CDTV audio cords and play away. This makes for a nice, compact desktop unit, although the sound quality cannot match a typical home stereo.

Commodore assumes that most of you will hook CDTV up to your TV set, using the supplied RF Modulator, with audio then going through your stereo system. This clearly yields the best sound quality and also puts CDTV where Commodore wants it—right in your living room!

If you don't have a stereo in your living room, you can connect CDTV directly to your TV, although the sound quality leaves a bit to be desired—at least with the TV I tried.

Once you've set up your system, you will be in for a treat when it comes to operating it. CDTV defines a whole new style of computer interface—one that is more kiosk-like than computer-oriented. Because the unit is meant to be commanded by an individual sitting on a couch using a low-res pointing device, all menus are simple and clear, all fonts are quite large, and all screens are decidedly uncluttered.

Basically, you navigate through a series of large boxes—pushing "A" to advance, select, or enter, and "B" to go back. Although there is an enter button, it is used only to save information to bookmark memory (about 2K of memory used for such small tasks as saving a place in a game) or to confirm an "A" command. There is also an escape button, but this is used primarily as a help key. In joystick mode, "A" acts as the firebutton.

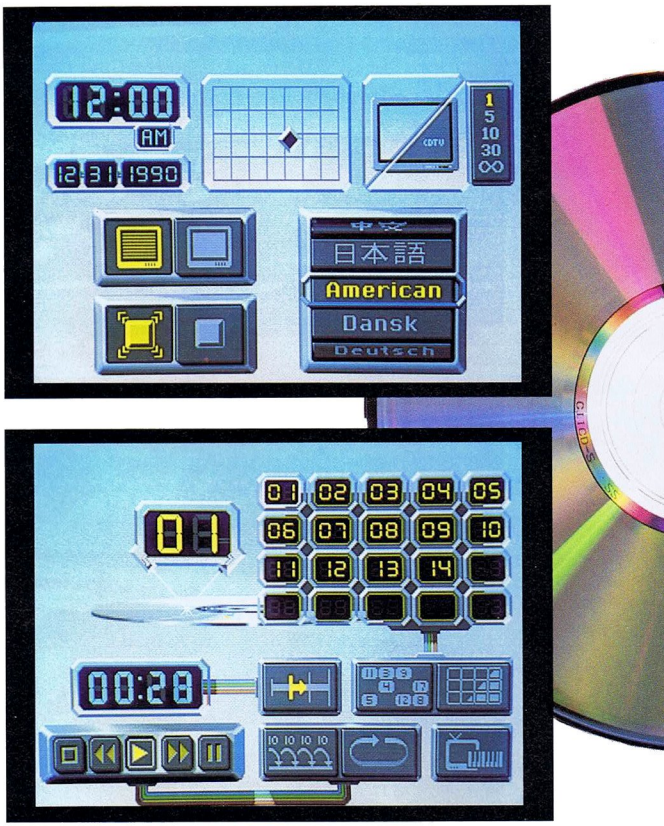
Commodore provided CDTV developers with interface guidelines stricter than any imposed on Amiga software. The goal of these guidelines is not just ease of use, but also uniformity in look and feel. One problem developers must overcome, however, is the slowness of the CD drive. Each program must inform the user when a command has been accepted and is being processed; otherwise, the impatient user will continue to pound away at the remote.

Loading and unloading programs is about as simple as it gets. Simply pop the CD in to load or out to unload. CDTV reboots at each exit, and all applications are completely autobooting.

Because CDTV is not marketed primarily as a computer, there is a wealth of new terminology to describe common computer functions. For instance, peripherals are "accessories," boot becomes "start," cursor becomes "pointer," icon becomes "symbol," RAM becomes "memory," and software—as you'll be reminded many times in the sidebars and buyer's guide—becomes "title." Some terms, such as guru and directory, have been dispensed with altogether.

Report Card

In terms of overall performance, CDTV garners mixed, but generally excellent, grades. Like any Amiga, the graphics, screen changes, and cursor movements have a nice snap. For those accustomed to speedy hard drives, however, the access time from the CD-ROM will seem a trifle slow. This is a problem with all CD-ROM devices, not just CDTV. As developers learn a few more preloading and memory-saving tricks, their applications should become more lively.

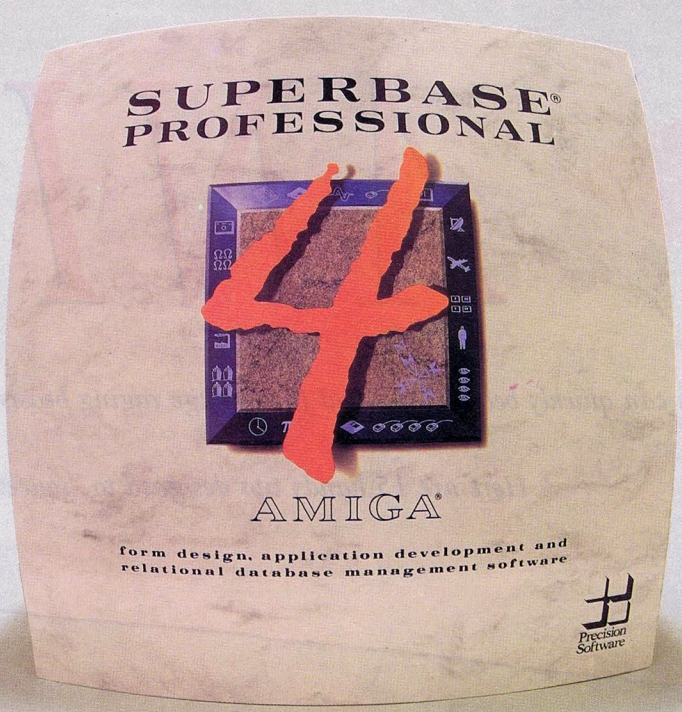


"Interactive" is the byword of CDTV—with users choosing options from simple, graphical menus and control panels by using the remote controller.

For now at least, many people may find themselves pushing the buttons again and again to make sure they have properly issued their commands, which can sometimes take a few poundings. Applications such as Applied Optical Media's World Vista Atlas solves this input problem by issuing a solid beep when the key press has succeeded.

On the other hand, the combination of simple, bold graphics, near-photographic images, hand-held control, and CD-quality sound is quite remarkable—regardless of speed.

CDTV could represent a new, exciting, and very different era for many Amiga users. Hard-core users may not like the sluggishness of the CD drive, the limited RAM, or the remote-control device. Others, though, will welcome the excellent sound and the innovative style of application. But anyone contemplating shelling out a grand for such a system should get some demos first. Since the proof will be in the applications, let them help you decide. In the meantime, check out the "Titles/Disc" sidebar that highlights some of the applications available, plus the buyer's guide for a complete list of all CDTV titles to date. ■



The Heavyweight

For your most demanding database needs, look no further than Superbase® Professional 4, the heavyweight database for the Amiga. The result of more than two years intensive scrutiny by some of the world's largest organizations, this technology won the largest Defense Department PC contract ever awarded and is now available for the Amiga.

Superbase Professional 4 isn't merely an upgrade from our best-selling Superbase Professional, it's an entirely new package absolutely bulging with new features like Workbench 2.0 look and feel, a visual object-oriented Form Designer, over 100 new DML programming commands and the enormous capacity to expand to meet your growing needs.

From the simple to the complex

Now fully cross-compatible with our best-selling PC version, Superbase 4 for Windows, Superbase Professional 4 provides an interface easy enough for novices to learn and use, along with the tools and power to build the most complex database systems you'll ever need. Applications port easily between both environments for added flexibility.

The unique VCR-style Control Panel lets you browse through loads of data, and an improved Form Designer gives you the ability to design custom input screens and presentation-quality output forms quickly and easily. Command pushbuttons, a graphical labels facility, expanded ARexx support and direct dBase file support are just a few of the new features you'll find in Superbase Professional 4.

Heavy numbers

Superbase Professional 4 is a heavyweight in the numbers department too. Up to a billion records per file with up to 999 indices, all open and updated dynamically. Internal text fields can contain up to 4,000 characters and external text can be of unlimited length. There's no limit to the number of fields, open files or relational joins. The only limit is your imagination.

Add a ton of other features like image and sound support (IFF, PCX, GIF and more), telecommunications, a built-in text editor for mailmerges and other operations. Multi-file queries, a banded report generator and WYSIWYG form design all combine to make Superbase Professional the heavyweight among database programs.

Superbase Professional 4 is available now at your favorite dealer, or call us for upgrade information.

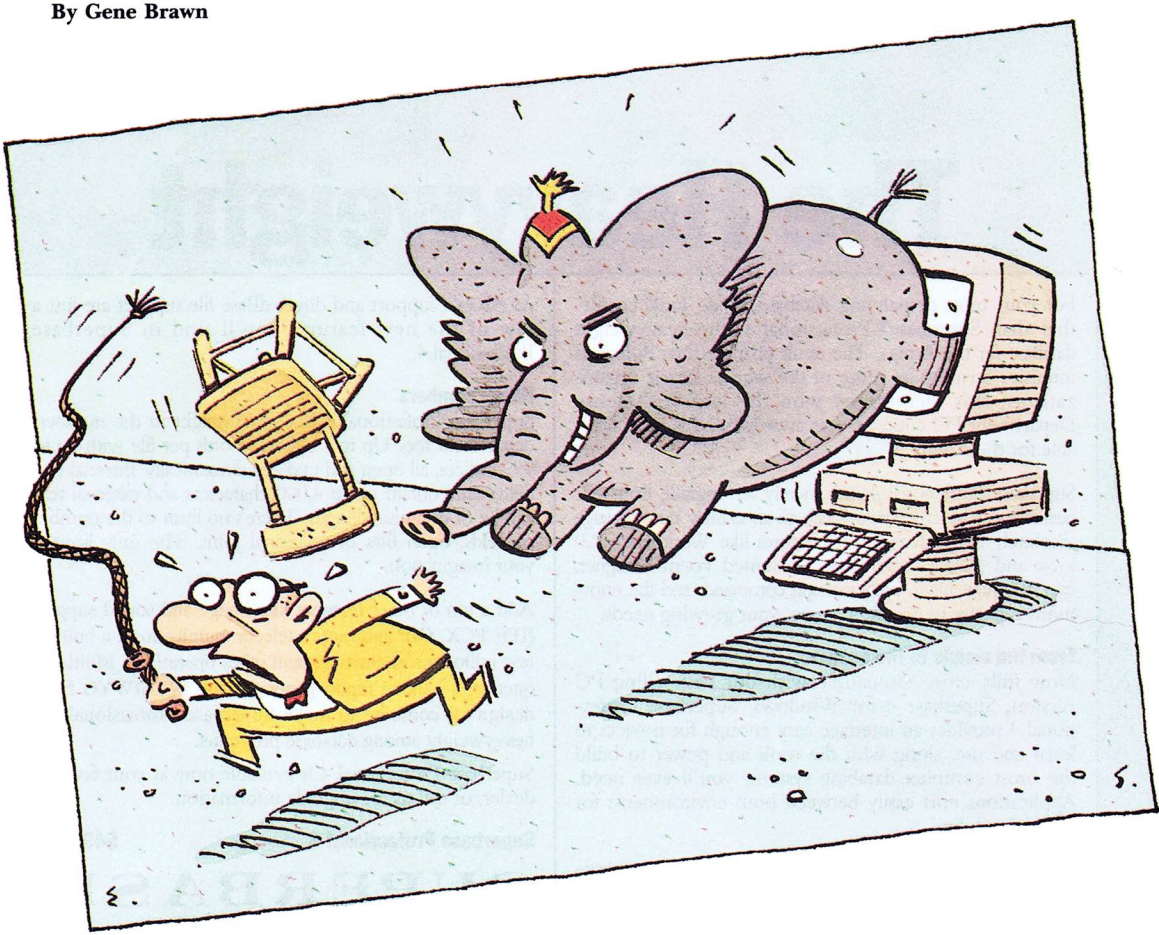
ANIM

ANIM files can quickly become ANIMal files—huge raging beasts that consume vast

Here are 15 handy tips designed to "squeeze" your animation

By Gene Brawn



ILLUSTRATED BY ELWOOD SMITH

TAMERS

quantities of valuable system memory, storage space, and loading time.

files and tame them into more manageable proportions.

On the pitcher's mound, Charlie Brown leans in for the sign from Linus behind the plate. Shakes him off twice. Goes into his windup and delivers a slow, hanging curve. The opposing batter uncorks a powerful swing and hits a towering grand slam over Snoopy's head in left. A "4" drops into place in the first-inning slot on the scoreboard and the Peanuts gang is already behind. Back to the dugout, where, mouth opening wide, Lucy cries, "Oh, Charlie Brown, can't you do *anything* right!"

A simple, familiar animation sequence, but animator Schulz may have used up an entire drawing pad or two, from his stock of thousands, to do all the frames in the sequence. While animation on the Amiga can make your job simpler, you still face a monumental resource problem: Even simple animation files eat up huge amounts of disk-storage space, system RAM, and time spent in drawing individual frames.

If you have unlimited means, you can just whip out your checkbook and buy megabytes of memory and mass storage. The rest of us, however, must learn to do more with less. The following hints and techniques, ranging from creating the smallest possible ANIM files to organizing your disks intelligently, will help you to get the most from your Amiga animations. I've organized my fifteen efficiency tips with the first ten directed more towards novices and the last five geared for more seasoned users.

Most of the performance problems encountered by Amiga animators are attributable to the ANIM format, which even though it represents a file-compression scheme, still often results in the production of tremendously large, unwieldy files. (See the "Getting Started" sidebar for more particulars on the ANIM format.) Accordingly, many of my tips describe ways to reduce the size of your ANIMs; a smaller file occupies less disk real estate, loads faster, and uses less of your precious RAM. While some of the more basic techniques may seem obvious or too simple to include, they bear repeating, if only because you will use them so often. Also, for the less experienced animator to fully understand these tricks, it is ►

Getting Started

Background Basics

IF YOU ARE a bit fuzzy on the subject of the Amiga's graphic display, here's a quick crash course. Behind your Amiga's display are up to six "hidden" screens, called bitplanes, each duplicating the visible screen in width and height. When you decide on the number of colors for your palette, you are actually telling the software to create a display with one to five bitplanes. (In HAM—Hold-and-Modify—and Extra_Halfbrite modes, six-bitplane palettes are created with the help of some sophisticated hardware tricks, but we will ignore them for now.) If you create a palette of two colors, the display manager creates a single bitplane. Palettes of four, eight, sixteen, and thirty-two colors result in the creation of two, three, four, and five bitplanes, respectively. In conjunction with this, each bitplane is assigned a value of 1, 2, 4, 8, or 16.

Imagine a line drawn from any pixel, extending through all five bitplanes. The display manager examines all the pixels on this line. If a hidden pixel is "on," the software assigns it a value equal to its bitplane number; otherwise its value is 0. The sum of these values represents the palette register used to draw the pixel. For example, if we indicate the hidden pixels with 1's (on) and 0's (off), then a pixel drawn with the color in register 19 would be 10011 (reading the planes from right to left). Since bitplane 1=1, bitplane 2=2, and bitplane 5=16, the sum of the activated pixels is 19.

The important thing to remember is that this is a register number, not a specific color. Keep this in mind because it is important to understanding the techniques involved in some of the tips presented in the article.

WHAT'S AN ANIM, ANYWAY?

ANIM is an animation-compression file standard developed by Gary Bonham, author of ANIMagic (Oxxi) and the freely distributable player program ShowANIM. It has gone through quite a few versions since its fledgling days when Aegis Development was pushing its acceptance—not very suc- ►

necessary to have a basic understanding of the Amiga's graphic display (also covered in the "Getting Started" sidebar).

By the Numbers:

TEN STARTER TIPS

The first two-thirds of our "Efficient Fifteen" are designed for less experienced animators, but all ten of them add up to major savings in valuable resources, so feel free to take a refresher course even if you've been at the animation game for a while. Otherwise, pick us up in the second part of the course. *(For details on how to contact manufacturers of programs mentioned in either part of this article, consult the "Manufacturers'/ Distributors' Addresses" list on p. 88.)*

TIP 1 Use Fewer Colors

There is a direct correlation between the palette and resolution of an animation and its size: More colors and/or higher resolution mean much larger files. Bigger animation files load and play back more slowly. For example, a 320×200 two-color image consumes 64,000 pixels to display its single bitplane, while a 32-color palette requires a whopping 320,000 pixels (five planes × 64,000). It should be obvious that if you want to save memory, you should use fewer colors.

If you are not using all the colors in your animation's palette, remap the ANIM to use as few colors as possible, filling the lower registers (0–16) first. In other words, if you are using only 14 colors of a 32-color palette, use your paint program to remap the picture as a four-bitplane, 16-color image. This technique is especially useful if you must eliminate a few colors to reduce the size. Many times an animation will survive a reduction of colors virtually unchanged.

In similar fashion, you may be able to reduce an animation's resolution in order to reduce its size. Use an image-processing program, such as The Art Department ($89.95, ASDG) or Art Department Professional ($199.95), to change the resolution of, say, a 320×400 image to 320×200. You will be surprised how effective such a simple adjustment can be.

TIP 2 Use Smaller Screens

Next, ask yourself if you really need the entire screen for your image. If you are using The Director 2 ($129.95, Right Answers Group) or DeluxeVideo III ($149.95, Electronic Arts), you can display less-than-full-size screens and dramatically reduce your storage requirements. If your presentation program does not have this feature, save the undersized screen as a brush and stamp it in place on a blank background screen just before you display the image.

TIP 3 Overscan Is Expensive

If you decide to use the Amiga's overscan display mode for your ANIM, beware! Overscan files are deceiving. That narrow band you add around the edge of the picture increases the size of the image by more than 30 percent. This usually results in a much larger file than you anticipated and, worse, an animation that does not play very fast. The solution is easy: Use the normal format whenever possible. For example, overscan is unnecessary if your static image is smaller than a full screen and it appears on a solid-color background. If you set the border color (color 0) to the same color as your picture's background, you will never see the surrounding frame—cheap overscan!

TIP 4 Use Brushes, Not ANIMS

Another question to consider is whether the sequence needs to be an ANIM or whether your software can do the job for you, instead. For example, if you need to move a title from left to right across the screen, you could create an ANIM using the nifty Move menu in DeluxePaint III ($149.95, Electronic Arts) to automate the progression of the brush over the background. But why not eliminate DPaint and the ANIM altogether? Instead, you could use DVideo III's Path tool to accomplish the same thing in real time. Save the brush and picture files separately, and let your presentation program do the rest. This technique fails miserably (the results will be slow and jerky) if you have too many brushes to move, or if the brush is too large. If that is the case, however, try using smaller or solid-color brushes whenever possible, or, if you can organize it, try staggering the brushes so that no more than two or three appear on the screen at the same time. ►

cessfully—as an industry standard. The ANIM format is now very widely supported, and word has it that Bonham is working on yet another update.

ANIMs are part of the IFF (Interchange File Format) family. When your Amiga stores your animation sequence as an ANIM file, it is compressed so that only the initial scene and the elements that change between frames are saved. This in itself can cut down significantly on the expenditure of valuable system memory and disk-storage space, at the same time allowing for nearly real-time playback of the animation.

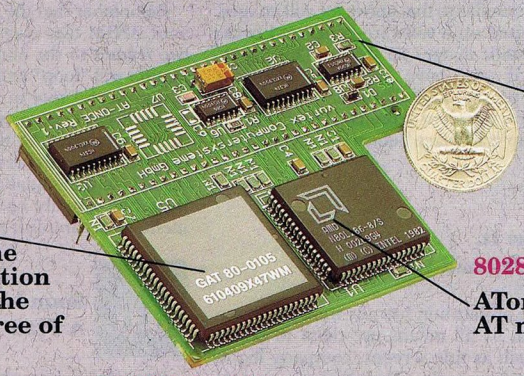
Unfortunately, ANIM files still contain so much information that they tend to become very large very quickly. Just a few seconds of fairly complex animation will produce an ANIM file larger than the 880K that can fit on a standard floppy disk. This is the reason why more crafty, economical measures, such as the tips contained in the main article, are required to handle ANIM files efficiently.

—GB

ATONCE

THE ULTIMATE PC/AT EMULATOR FOR YOUR AMIGA

$398
Manufacturer´s
Suggested Retail Price



MOTOROLA 68000 CPU

Each ATonce comes complete with a high quality original Motorola 68000 CPU.

GATE ARRAY

The ATonce Gate Array, the ATonce Chip-Level Emulation and ATonce AT-BIOS give the emulator a very high degree of AT compatibility.

80286 CPU

ATonce is based on the standard AT microprocessor.

ATonce - THE 286 EMULATOR

ATonce is the ultimate PC/AT emulator for your Amiga 500 or Amiga 2000 computer. ATonce gives your Amiga a complete AT emulation, that includes an AT compatible BIOS, emulation of the parallel and serial ports, sound, color graphics and hard disk support, yet while running as a task within AmigaDos! Thanks to the use of a custom made Gate Array and SMT technology the ATonce board is incredibly compact and easy to fit. ATonce plugs directly into the Amiga´s 68000 CPU socket and no soldering is required.

Fitting is a 10 minute operation* and full installation instructions are included in the user manual. Each ATonce is supplied with a high quality low power Motorola 68000 CPU, saving you time with the installation, providing a high degree of realibility and leaving you your original as a spare! ATonce does not affect the normal operation of your Amiga and is totally transparent when not in use.

*Your dealer will be able to fit ATonce for a small charge if required.

Call Compuserve for product and technical information Mailbox # 100015,330

INCREDIBLE SPECIFICATIONS

- Low Power 16 Bit 80286 CPU 7.2Mhz clock speed
- SMT (Surface Mount Technology) compact circuit board with low power comsumption
- Highly integrated CMOS Gate-Array with embedded Interrupt Controller and Memory Management Unit
- High quality Motorola 68000 CPU
- Easy 10 minute installation - NO SOLDERING
- ATonce can be used with the Amiga 2000 by the use of a special adapter that plugs into the 86 pin processor slot of the Amiga 2000
- Norton SI rating: 6.1 MIPS Test: 70%
- Full 640KB of DOS memory available on 1 MB Amiga. All memory above 1MB can be used as Extended or Expanded memory
- ATonce will work with all autoconfigurating autobootable Commodore compatible hard disk systems that use an AmigaDos compatible hard disk driver. Up to 24, 32 MB partitions are available under MSDOS 4.01. MSDOS can be booted directly from your hard disk
- With ATonce the following video emulations are available: CGA, Hercules*, Olivetti* and Toshiba3100*. The Amiga 500 Blitter is fully utilized. (* these modes use interlace)

ATonce is State-of-the-Art technology. Developed and produced in Germany

ACCESS TO 1000´s OF MSDOS PROGRAMS

- ATonce runs unrestricted as a task on the Amiga computer
- Complete integration of the internal 3.5" disk drive as a 720KB MSDOS drive. External 3.5" and 5.25" disk drives are fully supported
- The Amiga mouse can be used as a serial Microsoft mouse. It can be operate at COM1 as well as COM2
- The parallel interface can be used as LPT1 under MSDOS

- ATonce supports all AT sound facilities, the AT real time clock and CMOS RAM
- All MSDOS versions from 3.2 up to 4.01 have been succesfully tested
- ATonce is delivered complete with a detailed user manual. A 3.5" Amiga diskette is supplied that contains the installation and emulation software and other useful tools. MSDOS is not supplied
- Free software updates to all registered owners!

For full product information please contact your local Amiga dealer

AT is a trademark of IBM. Commodore and Amiga are trademarks of Commodore. MSDOS and Windows 3.0 are trademarks of Microsoft. Hercules, Motorola, Olivetti and Toshiba are trademarks. ATonce is the registered German trademark of vortex Computersysteme GmbH.

Circle 16 on Reader Service card.

TIP 5 Build Your Pictures "On the Fly"

For a technique similar to that above for still images, use brushes stamped on a software-generated background to build static images on the fly. This is particularly useful if you have repeating elements throughout your presentation. For example, if a logo is to appear on five different screens, save it once as a brush and stamp it in place before you display the screens.

TIP 6 Draw It, Don't Load It

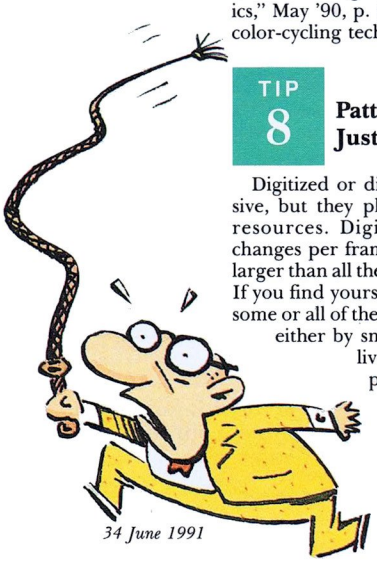
If your favorite application has any tools for drawing to the screen, by all means use them to create simple images such as title screens, company logos, borders, and backgrounds. The Amiga's custom graphics chips can draw these elements faster than you can load them from a file, preserving your precious disk space for more important elements. This tip is particularly appropriate for text screens. It is a waste of memory to save a text screen as a picture file when your presentation software can do the typing for you.

TIP 7 Don't Move the Pixels, Move the Colors

Color cycling is one of those obvious, but often overlooked space-saving techniques. Do not neglect color cycling just because it is not "real" animation. Cycling through the colors in the palette is often all you need to achieve the illusion of motion. In addition, because color cycling operates on a single frame, it adds nothing to the file size. (See "Accent on Graphics," May '90, p. 50, for a detailed description of the color-cycling techniques.)

TIP 8 Patterns and Dithering: Just Say *No!*

Digitized or dithered animations may be impressive, but they place severe strains on your system resources. Digitized animations have so many changes per frame that the resulting ANIM may be larger than all the constituent frames added together! If you find yourself faced with this dilemma, remove some or all of the dithering with your paint program, either by smoothing each frame of a digitized, live-action sequence or by using your program's palette tool to merge and reduce the number of dithered colors in the frames.



TIP 9 Watch Your Loops

Remember that the program with which you create your ANIM files may automatically append the first two frames to the end of your opus so that the animation will "loop" endlessly upon playback. Looping is a powerful tool in the animator's repertoire, but you will not need these extra frames if your creation does not repeat, so don't include them. DPaint III users should instruct the program to save two fewer frames than the total displayed in the title bar. Other programs usually have a software switch in the file menu to accomplish the same thing.

TIP 10 Sounds Like A Plan

Use SMUS (Simple Music Score) files whenever possible. These are files created with scoring programs such as Deluxe Music Construction Set ($99.95, Electronic Arts) or Music-X ($299.95, Micro-Illusions). Although a SMUS score can never equal the dynamic range of a song digitized directly from a CD or a record, it will be much, much smaller. Commodore's AmigaVision ($149.95), The Director 2, and DeluxeVideo III support standard SMUS scores as well as 8SVX sampled (digitized) sounds.

While we're on the subject, remember to reuse digitized samples whenever possible. It amazes me how many different sounds can be created from a single sample by varying the pitch or frequency of the original. For example, I changed a dripping water sound into that of a closing door simply by changing its playback frequency.

THE HIGH 5: ADVANCED TECHNIQUES

If you employ all my basic tricks and still wind up with a bloated, 500-frame ANIM that takes absolutely forever to load, then you probably need more advanced help. Although the following techniques are quite straightforward, they will be easier to grasp if you already have a basic familiarity with the Amiga's internal image structures and the ANIM standard. Review the "Getting Started" sidebar if you need to bone up on these.

TIP 11 Pack Your Palettes, Pardner

"Palette packing" can reduce the size of your ANIM files by at least 20 percent. This somewhat-esoteric technique involves swapping the colors in your ANIM palette and then remapping the sequence to achieve a smaller file. No other changes to your animation are necessary. ►

The Kitchen Sync™

NEW!

THE KITCHEN SYNC—KOMPLETELY INTEGRATED TIME BASE CORRECTORS HAVING EVERYTHING NECESSARY TO SYNCHRONIZE 2 INDEPENDENT VIDEO SOURCES.

Completely synchronize not one, but two independent video sources for use with virtually any switcher or digital video effects system requiring synchronous video inputs.

- Two complete infinite window time base correctors on one IBM AT/Amiga compatible card
- Works with any video source, including consumer VCRs and camcorders
- S-VHS and Hi-8 compatible ■ Optional Y/C output
- Great for use with the Video Toaster™

When they created the Toaster, they threw in everything but the Kitchen Sync.

$1895

SuperGen™

GENLOCK AND OVERLAY SYSTEM

- Broadcast quality RS-170A composite output
- Two independent dissolve controls
- Software controllable
- Compatible with all Amiga® models
- Dual video outputs ■ Key output
- Selectable 3.58MHz notch filter

$749.95

SuperGen2000™

THE FIRST TRUE Y/C GENLOCK & OVERLAY CARD FOR THE AMIGA® 2000 SERIES COMPUTERS

- S-VHS, ED-BETA, Hi8 compatible
- Broadcast quality NTSC RS-170A output
- Built in SC/H phase adjustability
- Built in sync generator ■ Dissolves

$1995

Circle 28 on Reader Service card.

If you don't believe me, try this simple example. Using DeluxePaint III, create a solid 100 × 100-pixel brush with the color in register number 1. Use the Move menu to animate the brush from left to right across the screen. When I tried it, my test ANIM for this sequence totaled 6630 bytes. Now repeat the process but use register number 31 for the brush's color. This time, my animation consumed 33,150 bytes. Both ANIMs are identical except for the color *register* used to draw the brush. Why was the second file five times the size of the first?

The answer lies in the bitplanes. When your Amiga saves an ANIM, the first thing it does is to scan the sequence frame by frame, looking for changes between frames. The software calculates the differences for each bitplane. These changes are then stored with the bitplane. If a pixel drawn with color 1 (only bit 1 is "on") is transformed to color 31 (all five bits are on), then all five bits are needed to describe the new color, and the file is thus larger by fivefold. Therefore, it is to your advantage to place the colors that change the most in the lower registers, preferably those that use just one or two bitplanes.

How do you accomplish this? First, reduce the number of bitplanes used by your animation by eliminating any colors you are not using. Using the automatic Pack function located in the Color menu of PIXmate ($49.95, Progressive Peripherals) is an ideal way to achieve such a reduction. The next step is an exercise in trial and error, at least for now. Many image-processing programs, such as Deluxe PhotoLab's Color module, have a "histogram" function that totals the number of pixels used by each color in an image. (PhotoLab used to be available separately, but is now bundled with Electronic Arts' DVideo III.) If you use this tool to compare a few typical frames, you will see instantly those colors that vary the most.

Next, use your paint program's palette tool to swap these colors to registers 1, 2, 4, 8, or 16 (assuming a 32-color palette), and then remap the ANIM. Any color placed in one of these registers requires only one bit to describe the color. The next best locations are registers 3, 5, 6, 9, 10, 12, 17, 18, 20, and 24—all of which use only two bits. If you can put all the changing colors in these registers, your changes will never exceed two bits. A software program that automates this process would be most welcome. . .any takers?

TIP 12 Intelligent Disk Mapping

Another important, but little-used technique is the art of intelligent disk mapping. Simply put, this involves placing your files on the disk in such a way as to minimize your disk drive's head-travel time. The closer the next track, the faster the file loads and the shorter the time between segments. This is important, because AmigaDOS has the annoying habit of scattering pieces of a file around the disk, putting the bits and pieces wherever it finds space on the disk. While this uses the available disk space efficiently, the result is often a lot of grinding by the drive while it searches out the pieces of your file.

The solution here is simple. Create a final master disk by copying the necessary files one at a time, in script order, to a clean disk. If you are CLI-literate, simply use the COPY ALL (not DISKCOPY) command to reorganize and optimize your files on a clean disk.

TIP 13 Preload Big Files

Sometimes, even after all the manipulations mentioned above, your file is still too large to load in the amount of time available. There are a couple of easy solutions to this dilemma. Perhaps the easiest is to load the file before the animation begins and hold it in memory until you need it. Many animation programs provide a way to preload animations. Two of these, The Director 2 and AmigaVision, let you begin loading a file and then start playing it back immediately—before all the frames are loaded.

TIP 14 Slice and Dice Big Files

Another quick fix for Director users is to break the file into smaller pieces and to load them when you have any free time during your animation. When you need the sequence, simply play the pieces as a series of contiguous animations to re-create the original. I specify The Director because it is the only presentation software I use that can switch between animations without halting everything momentarily.

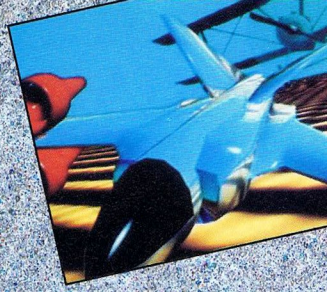
TIP 15 Economize When You Digitize

If you digitize your animation from a live-action video sequence, remember that you do not need to copy every frame of the original. Professional animators use a technique called animating "on twos" (i.e., every second frame) in order to save time and reduce the number of frames that need to be drawn. You can profit from emulating this technique in your digitizing sessions. In fact, you may be able to extend it even further by animating "on threes" or even "fours" if the sequence does not change very much over time. Be aware that this method is not as useful for scenes with lip-synched sound tracks. It will be difficult to re-create the original timing and nuances of speech without digitizing all the frames.

While our efficiency course ends here, keep looking for other ways to economize. These hints and tips are but a small sample of the techniques available to the creative producer. Consider them as a starter set on which to build your own magician's chest of tricks. The application of a little brainpower and a basic knowledge of the Amiga's inner workings will do wonders in dealing with your animation problems. ■

Gene Brawn is a digital animator, graphics designer, and frequent lecturer, as well as a contributing editor to this magazine. Write to him c/o AmigaWorld, *80 Elm St., Peterborough, NH 03458.*

All photographs are of actual DCTV screens.



DCTV™

The Future Is Here

- ▲ Paint, digitize and display full color NTSC video graphics on any Amiga.® *
- ▲ Capture a video frame in 10 seconds from any color video camera. (Also works with still video cameras, video disk and still frame capable VCR's.)
- ▲ Display and capture full color 24 bit high resolution images.
- ▲ Convert DCTV™ images to or from any IFF display format (including HAM and 24 bit).
- ▲ Paint, digitize and conversion software are all included.
- ▲ Works with all popular 3D programs.
- ▲ Animate in full NTSC color.

$495

** Min. 1 Meg. required*

DCTV™ (Digital Composite Television) is a revolutionary new video display and digitizing system for the Amiga. Using the Amiga's chip memory as its frame buffer memory, DCTV™ creates a full color NTSC display with all the color and resolution of television. Sophisticated true color video paint, digitizing and image processing software are all combined into one easy to use package included with DCTV™. DCTV™ also works with all popular 3D programs to create full color animations that can be played back in real time.

Antidote to Chaos

Get smart! Let Agent Laser help you fight the forces of C.H.A.O.S. (Criminal Hierarchy Against Organized Systems) with this arsenal of tips for more efficient and productive computing.

Does it seem that a network of nefarious operatives are lurking under the cover of your CPU, conspiring to hold down your productivity level? While it's tempting to pass the blame, the real culprit is probably a lack of organization.

Your Amiga can make you even more productive than it already does. Although becoming organized takes effort, it is considerably easier if you have help. We're not talking about an Agent 99 to bail you out of every bungle. We're talking about the right combination of software, devices, and methods.

In using Amiga products, I have learned many things that keep my own computing life orderly. These tips and resources may help you, too. Even if you do not take every recommendation offered here, I bet you will find at least a few among them that can make a positive difference for you.

For details on how to contact the developers of products mentioned in this article, consult the "Manufacturers'/Distributors' Addresses" list on p. 88. Software labeled FD is freely distributable—either public domain (totally free), shareware (the author requests that you pay a fee if you keep using it), or copyrighted (the author requests credit, but no money). These programs are available through networks, BBSs, and the Fred Fish disk collection.

Disky Business

One thing every Amiga owner should have is at least two disk drives. Because much of AmigaDOS is loaded from disk as needed, a single-floppy system is very limiting. For around $100, a second floppy drive can save you time and aggravation, and make you a happier person. ►

Sound!

Next Generation Digital Audio Tools from SunRize

Studio 16™

Turn your Amiga 2000/3000 into a professional digital audio workstation. You can record hours of audio direct to hard disk synchronized with time code. Edit a complete video sound track on your Amiga. Add special effects. Fix glitches and filter noise. Supports 16 and 12 bit audio. Studio 16 software is bundled with one of two cards:

AD1012

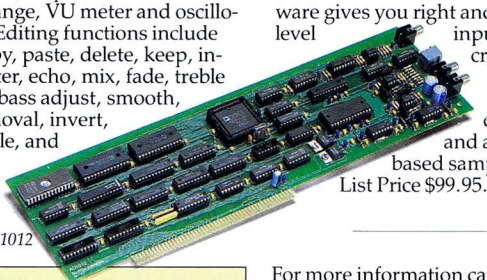
This 12 bit sampler card includes Studio 16 software, audio in/out, AD2105 DSP, adjustable low pass filters and a SMPTE time code reader. Sampling rates of up to 100 KHZ are supported. With the signal-to-noise ratio of a professional VTR, the AD1012 is perfect for editing video sound tracks at low cost.

AD1016

This 16 bit sampler card includes Studio 16 software, a 56001 DSP, stereo audio in/out, 8 times oversampling digital filters, digital I/O for DAT or CD hookup, MIDI in/out, and SMPTE in. With the signal-to-noise ratio of a compact disk, the AD1016 puts a modern digital recording studio in your Amiga.

Audition 4™

This advanced 8 bit sample editor continues where AudioMaster III left off. Record direct to floppy disk. 100% assembler. Real time zoom. Incredibly fast scroll. Freehand edit. Sequenced loops. Real time effects include echoes, high pass filter, low pass filter, band pass filter, stop band filter, mix, fade, flange, VU meter and oscilloscope. Editing functions include cut, copy, paste, delete, keep, invert, filter, echo, mix, fade, treble adjust, bass adjust, smooth, DC removal, invert, resample, and tune.



AD1012

Audition 4 vs. AudioMaster III

Feature	Audition 4	AudioMaster III
Sequenced Loops	yes	yes
Easy to Use	yes	yes
HiFi Mode	yes	yes
Record to Floppy	yes	no
Save Executable Sounds	yes	no
Preview Effects	yes	no
Real Time Filters	yes	no
Num. Real Time Effects	8	3
Time to do 100K Echo	22 secs	106 secs
Program Size	~100K	~207K
List Price	$99.95	$99.95

Special AudioMaster Upgrade offer! AudioMaster I, II and III owners can upgrade to Audition 4 by sending your original AudioMaster disk along with $40 + $5 S&H to the address below.

Perfect Sound 3™

This best selling 8 bit stereo sampler includes everything you need to start recording any sound right away. Just attach Perfect Sound to your printer port and plug in your own CD player, radio, or microphone. Using the provided software you can record and edit any sound. Advanced recording hardware gives you right and left line level inputs, a microphone jack, noise filters, digital gain, and a hardware based sampling clock. List Price $99.95.

SysInfo runs its diagnostic tests in about three seconds and then displays the results on one screen.

For even greater happiness, you can speed up your floppy drives. A floppy-disk accelerator is software that provides a RAM cache to store things as you load them. Once loaded, the data is read from the RAM cache instead of from the slower mechanical disk drive. (The AmigaDOS ADDBUFFERS command does the same thing, but uses valuable chip RAM.) Facc-II ($34.95, ASDG) uses fast RAM, it has a very effective interface for raising and lowering cache buffers, and it is something I truly miss whenever I use an Amiga without it. It is like a floppy-drive turbocharger.

Central Coast's Quarterback Tools (which, at $89.95, provides many utilities) and B.A.D. ($49.95, Centaur Software) can speed up your drives by defragmenting the files on your floppy and hard disks (be sure to back up your files before using them). As a disk fills up, the system may not be able to find one contiguous space in which to write a file, and may have to scatter data segments across the disk. Because the drive head must move across the disk to read a fragmented file, access slows. Files on a defragmented disk are more organized, so they load faster.

If you do not already have a hard disk, you will want one eventually. A hard disk offers almost instantaneous availability of dozens, perhaps hundreds of megabytes of programs and files (drive speeds vary, but any hard drive is far faster than a floppy). It also saves you from digging through stacks of floppies to find what you need. When you buy a hard disk, go for the greatest capacity you can comfortably afford—certainly nothing smaller than 40MB. You will soon discover that no matter how big a drive you buy, it is not big enough. You might even want to investigate the new removable-media drives (see "Bottomless Disks," Apr. '91, p. 20, for a look at the various removable-media technologies).

Keep in mind that while every mounted hard-disk partition uses some RAM, drawers do not. Rather than creating many separate partitions, you may want to use a few large ones and put related software into subdirectories. You can add a lot of path commands to your startup sequence, but when you type a command's name at your CLI or Shell prompt, the system searches the SYS:C directory anyway. Thus, putting those often-used command-type utilities in the C directory saves you from building paths to them.

Hard-disk owners need hard-disk back-up software. My two favorite hard-disk back-up programs are Quarterback ($69.95, Central Coast Software), and ExpressCopy ($49.95, ExpressWay Software). Quarterback's interface makes it very fast and intuitive. ExpressCopy, however, has a flexible ARexx port and a nifty CanDo-created front end (which you can customize using INOVAtronics' CanDo—a $149.95 authoring program). It also creates standard AmigaDOS-format disks, while Quarterback uses a custom format that only it can read.

When trouble comes to your hard or floppy disks, it is not always necessary to reformat and restore from your backup. You can correct some disk errors by using the right utility. Two that you should not be without are DiskSalv (FD by Commodore's Dave Haynie), and FixDisk (FD by Werner Gunther). FixDisk can attack those fearsome "Key NNNN already set" or "Volume FOO is not validated!" messages. DiskSalv is purely command driven, while FixDisk sports a slick user interface. Both programs can also restore deleted files if you have not written to the disk since you deleted them.

You should also avoid having your only copy of important tools on the hard drive—it might suddenly become unreadable. Take the time to build an "emergency" disk. Start with a stripped-down copy of your original Workbench disk, leaving the L directory's libs and devs intact. Fill it with a copy of your hard-disk reconstruction tools, your name-and-address database, and your favorite terminal program, word processor, or whatever tools you frequently use. Keep this disk in a safe place. Having a first-aid kit on one disk will save you a lot of time when you need to find everything quickly.

When you install devices such as hard disks and accelerator boards in your Amiga, you can check on their performance with diagnostic and benchmarking programs. These are handy not only to verify that a new add-on is working correctly, but also for the all-important purpose of bragging to your friends about how fast and powerful your Amiga is. I recommend SI, also called System Information (from the Kramden Utilities, FD by Pregnant Badger Software); Speed (FD by Argonaut Software); Amiga Intuition ►

PRESENTING THE MOST *DASHING* TRENDSETTER SINCE excellence!® 1.0

The first version of excellence! set the standards for power, features and ease of use in Amiga WYSIWYG (What You See Is What You Get) word processors. Now, excellence! v2.0 sets the standards again.

Whether you are a novice or novelist; student or professor; homemaker or executive, you'll enjoy the new, refined features an innovative pace-setter offers.

Excellence! has a personable and intuitive interface, allowing you to unlock its power in simple, understandable steps. Understandable also flourishes in the thorough reference manual that communicates with you in English, not some dialect of computerese.

What's new and better? First you'll notice the typing speed. It's fast! Excellence! zooms along as fast as you can type.* The Dictionary and Thesaurus are expanded with thousands of new words. Printing is extensively refined and features Mixed-Mode Printing to combine printer fonts with graphics. File and path names are longer allowing you to take advantage of hard drives. Excellence! now saves User Defined Defaults, so you start a document writing creatively, instead of mechanically changing margins. Now, that's better!

What's new? Virtual Memory Management permits document lengths limited only by disk space. The Thesaurus displays definitions to help you find the meaning you want. Leading values can be input directly so you can quickly change to double spacing. Alternate characters elegantly insert into text. You'll find easy-to-use Hard Drive Installation and Dictionary Maintenance utilities included for your convenience.

These are only a few of the many new features and improvements available in excellence! v2.0. So, we present to you a superb product, for your ever changing needs. From Micro-Systems Software, the leader in Amiga productivity applications.

Your favorite software just keeps getting better!

Technical Specifications

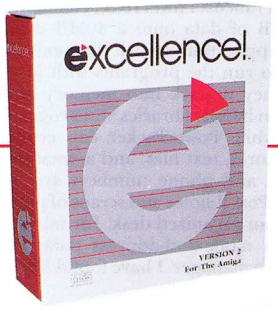
PRINTING
- **100% Color PostScript support**
- 4 types of printer output, special HP support
- **Internal printer font support**
- **Mail Merge**
- Preferences printer driver compatible
- **Mixed mode printing**
- Landscape printing

GRAPHICS
- **Mix pictures with text in paragraph**
- Graphics in headers, footers or footnotes
- **WYSIWYG** editing
- **Picture scaling and cropping**

ACCESSORIES
- **140 thousand word Dictionary** with legal, medical, technical, scientific, geographical, and biographical supplements
- **1.4 million word Thesaurus** (with definitions)
- **Spell-as-you-type**
- **Grammar and Style checker**
- Bullet proof **Hyphenation**
- **Glossary** with Macro key support
- **Macros** can be assigned to almost any key
- **Math**
- **Index and Tables of Content generation**

FORMATTING
- Mouse and keyboard support
- **Multiple newspaper-stylecolumns (1-4)**
- Left, Justified, Centered & Flush paragraph
- Left, Justified, Centered & Decimal tabs
- **Multiple headers, footers and footnotes** (odd and even headers and footers)
- Global font and style substitutions
- Page and Ruler settings stored in document
- **User defined Page Setup and Print defaults**
- Display current date and time in document
- Numbered footnotes

OTHER FEATURES
- **Typing speed exceeds 170 words per minute**
- IFF and ASCII file import
- **Free Technical Support for registered users**
- Clipboard support
- **Not copy protected**
- Undo typing
- **Hard drive install utility**
- Project icon support
- **Up to 250 fonts in a single document**
- Support for Interlaced windows
- **Virtual memory manager**
- 2, 4, or 8 color windows and color printing
- **Long path name support**
- Insert any standard character
- Low, medium & high resolution IFF support



Committed to excellence since 1978

*up to 175 words per minute

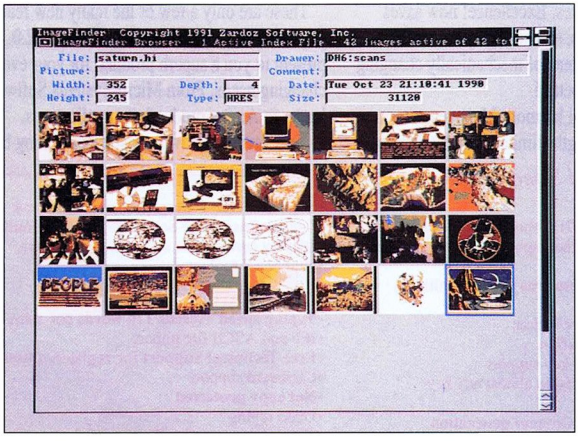
Circle 95 on Reader Service card.

One of DiskMaster's abilities is to decompress files compacted with the ZOO utility.



ImageFinder creates an index of picture files using miniature screen representations.

Based Benchmarks, or AIBB (FD by LaMonte Koop); and SysInfo (FD by Nic Wilson).

A number of other programs let you view and control various aspects of your Amiga's inner workings. TaskX and ScreenX (both FD by Steve Tibbett) are two examples. The former lets you control task priority, while the latter tells you the attributes of a screen and lets you grab it as an IFF file. SnoopDOS (FD by Eddy Carroll) lists the libraries, fonts, and so on that a program requires as that program loads. Switcher (FD by Khalid Aldoseri) provides a pop-up window that lets you flip between windows. Finally, ARTM, or Amiga Real-Time Monitor (FD by F.J. Mertens and Dietmar Jansen), combines the functions of many of these utilities.

Fighting Files With Files

The longer you work with a computer, the more files you acquire. This is a simple fact of life. Moving those files around from one disk or drawer to another gets to be a chore. If you do not like to use the CLI or Shell or to write scripts, then you need a directory utility. There are dozens available; each is a graphical, mouse-driven front end for AmigaDOS commands, and most have source and destination windows and many buttons for different functions.

Which utility is best usually turns into a religious argument. My favorite, the inexpensive DiskMaster ($49.95, Progressive Peripherals & Software), is full-featured and easy to use. Not only is it great for quickly shuffling files, but it can also show pictures, play sounds, print text files, unpack compressed downloads, compress files for uploading, and make many otherwise tedious tasks fun. Other excellent directory utilities include D.U.D.E. ($19.95, Centaur Software), and SID (FD by Timm Martin).

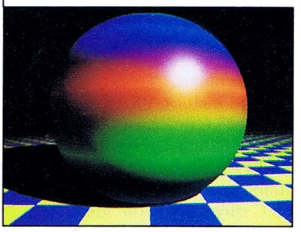
Find (FD by John Scheib) is a fast little utility that searches every mounted device on your system for whatever filename you feed it. It also allows wildcards. For locating a particular graphics file from the dozens or hundreds you have collected, check out Image Finder ($65, Zardoz Software). This incredible program creates visual indexes made from miniatures of all your screens and brushes, making them easy to locate on a crowded hard disk or in piles of floppies. Image Finder will even pop up and let you "inject" the name of a picture file into your favorite paint program's requester, just by clicking on a postage-stamped version of that picture.

What do you do when you have more files than space. . .when your Workbench boot disk or your hard drive fills up? Hardware compression chips are not yet available for the Amiga, but there are two slick programs that can pack down your files while still allowing easy access to them. Turbo Imploder (FD by Peter Struijk and Albert Brouwer) and PowerPacker (FD by Nico Francois/PowerPeak) enable you literally to put 80MB of data onto a 40MB drive. They can compress applications to half their existing sizes, allowing you to run the programs with just a brief hesitation as they unpack into memory after loading. Imploder can handle libraries and programs that use overlays, while PowerPacker can crunch down programs, pictures, text files, and animations.

Names, addresses, and phone numbers are important to everyone. Post-it notes and scraps of paper just do not make for an organized desk. For working most efficiently with name-and-address data, you should have a database manager. I have found Micro- ►

H A M - E

High quality RGB output for your Amiga

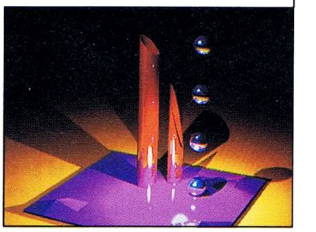


These images are **completely unretouched** photos taken from a stock 1084s RGB monitor using the basic HAM-E unit. They are pure RGB, *not* smeary composite.

The new HAM-E Plus is an even more potent yet virtually transparent, anti-alias engine which offers near photographic quality images on standard RGB monitors.

No other graphics expansion device offers so much performance and costs so little! And all the software to run it is **free.** Even upgrades!

There's not enough room to cover all the features of this system, so here's just a few.

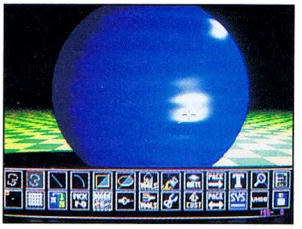


SYSTEM FEATURES

- Paint, render, convert and image processing software
- 18/24 bit "pure" modes
- 256/512 color register modes
- RGB pass through
- Screen overlay/underlay
- Screens pull up/down & go front/back
- View with any IFF Viewer
- Animate via ANIM or Page Flipping
- Works with DigiView™
- Completely blitter-compatible
- NTSC encoder compatible
- S-VHS encoder compatible
- PAL & NTSC compatible
- Uses *only* RGB port
- FCC Class B. UL Listed
- Works w/std Amiga monitors
- Does *not* use Amiga power

PAINT FEATURES

- Custom brushes use blitter
- RGB, HSV, HSL, CMY palette
- RGB and HSV spreads
- Extensive ARexx™ support
- 10 Color Cycle/Glow ranges
- Range pong, reverse, stop
- Smooth zoom, rotate or scale
- Area, edge, outline fill/overfill
- Dithered 24 bit fill mixing
- Anti-alias with any tool or brush
- Loads, shows GIF™ *exactly*
- "C" source code available free
- Upgrade from BBS 24 hrs/day
- Color or 256 greys painting
- 256 color stencils
- Matte/color/anti-alias/cycle draw
- Prints via printer device
- Auto enhance std IFF palettes
- Writes IFF24, GIF,™ HAM-E



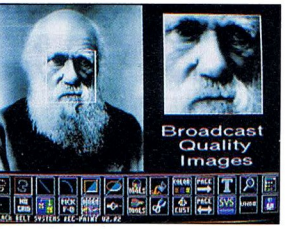


IMAGE COMPATIBILITY

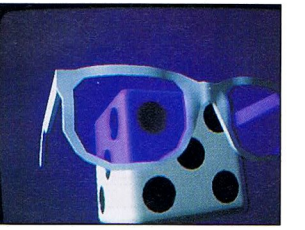
- 24 bit IFF, 24 bit IFF with CLUT chunks
- 2 to 256 color standard IFF, half bright
- HAM, DKB and QRT trace
- RGB8 and RGBN
- Targa™
- GIF™
- Dynamic HiRes™
- SHAM, ARZ0, ARZ1, AHAM, 18 bit ScanLab™
- UPB8 brushes
- All of the 12 different HAM-E format image file types
- Images may be scaled and converted to 24 bit IFF files



HAM-E™ 299.95
384 × 480 Pixel Output (NTSC)
384 × 560 Pixel Output (PAL)

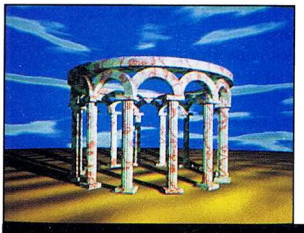
HAM-E PLUS™ 429.95
768 × 480 Pixel Output (NTSC)
768 × 560 Pixel Output (PAL)

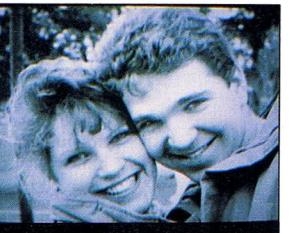
(All software works with either unit)

NEW IMAGE PROFESSIONAL™

THE MOST IMPORTANT 24 BIT IMAGE PROCESSING GRAPHIC SOFTWARE EVER CREATED FOR THE AMIGA

- Over 100 image processing operations
- 24 bit IFF input, output and viewing
- Any number of named image buffers
- Image sizes to 32767 × 32767 pixels
- 24 bit blending, clipping and compositing
- Apply any function using paint-like tools: Freehand, Rectangle, Ellipse, Polygon, Polyarc
- Full 24 bit undo, redo and isolate
- Displays in 24 bit, 18 bit, 256 color, or 256 greyscale
- Blended Merge and RubThru in many ways: Color-keyed, minimum, maximum and direct
- 24 bit warping, shading, rotation, geometric distortions and scaling
- Extremely intuitive, easy-to-use interface





***ALL SOFTWARE INCLUDED AT NO EXTRA COST WITH EVERY UNIT**

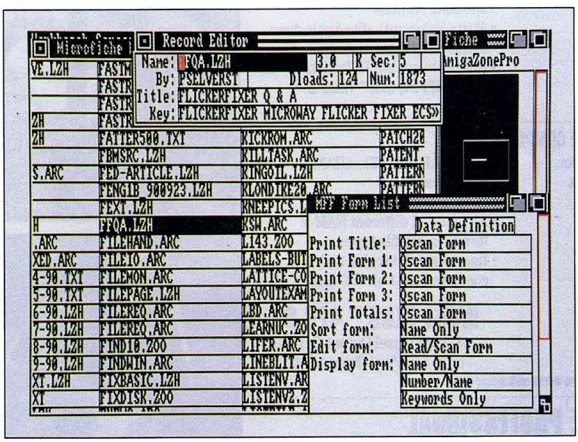
Fiche Filer ($99) and MicroFiche Filer Plus ($179, Software Visions) to be ideal. The programs come with truly useful templates that are perfect for home or small-business use. Both are extremely powerful, yet easy to learn and use. A less expensive alternative geared strictly towards address-book functions is Mail-O-Dex ($49.95, KarmaSoft). It is not as full-featured as the Software Visions products, but Mail-O-Dex's attractive price and simplicity may be exactly what you need.

If your life, as well as your address book, needs organization, look at NAG Plus ($99.95, Gramma Software). This program combines many features. It can store all your upcoming appointments and then cue you at the appropriate times with various sounds and visuals.

NAG Plus, like many other programs (both FD and commercial) mentioned here, provides an ARexx port. ARexx (included with the 2.0 system software from Commodore, or purchased for $49.95 from William S. Hawes) is a sophisticated programming language that facilitates task sharing among programs. It is useful even to nonprogrammers because most ARexx-capable software comes with some ready-made macros, and hundreds more are available to download. Many such macros are extraordinarily handy and can save you lots of time.



MicroFiche Filer and MFF Plus let you magnify and scroll through any area of a database.

"Free" Wheeling

There is perhaps no single computer peripheral more useful than a modem. With a modem and a terminal program, you have access to tens of thousands of programs and files you can download into your Amiga. Before being uploaded, most files available for downloading are compressed, or "archived," thus requiring less time—and hence less expense—to transfer). For this reason, you should keep a set of programs on hand to deal with the files you download.

Your archiving collection should include PKAX for .ARC files, ZOO for .ZOO files, LHARC or LZ for .LZH files, WARP for .WRP files, LHWARP for .LHW files, DiskMasher for .DMS files, and PKAZip for .ZIP files. All of these are freely distributable. As with other command-type utilities, your SYS:C directory is the ideal place to store them. From there, they can load right up, no matter which disk or directory you are in.

Nothing can spoil a downloading session faster than someone in another room picking up an extension phone and killing your connection. Unless you live alone, you might want to consider a second phone line just for your modem. Rates vary, so consult your local phone company. Do not ask for a data-grade line; a regular voice line is fine and costs much less. Most modern apartment buildings are already wired for two or more phone lines, so turning on a second one might just take the installer a few minutes to twist some wires together and add a wall jack.

Few of us live in a town with a lot of great Amiga BBSs from which to choose, so serious modem addicts will see some serious long-distance phone bills. If you are spending more than $30 a month calling BBSs, you should get a PCPursuit account from US Sprint/Telenet (call 800/736-1130 for sign-up information). This service gives you 30 hours of evening and weekend modem dialing for $30 a month, up to 2400 baud. Even better family and handicapped rates exist, if you qualify. Your unique PCPursuit ID number and password can become your magic carpet to bulletin boards and networks all over America.

Another valuable resource is the closest Amiga users' group, which gives you the chance to share tips, tricks and advice with other nearby Amiga owners. Someone two blocks away may already know the answer to the problem you have been struggling with for months. Many groups offer new-product demonstrations, hold prize raffles and have huge disk libraries you can copy. Further, local dealers often give discounts to users' group members, so you can easily recoup your yearly dues.

Organizing ourselves is not something most of us do with ease or glee. Putting your Amiga work system in order can actually be fun, though. Certainly the rewards are something to look forward to. Regardless of which programs or methods you use in your own system, you can smile smugly to yourself when you begin to realize the time, equanimity, and even dollar savings that are sure to follow. ■

An external digital dual channel TBC + Frame Synchronizer for under $1500?

"You must be kidding"

"Is it Toaster compatible"

"This must be a joke"

Guess again!

Introducing Showline's expanding Spectrum series of low-cost digital time base correctors + frame synchronizers.

Showline Spectrums™ have great features:

- Full frame synchronizer
- Infinite window TBC
- 1 or 2 channel models
- Composite only or Composite/S-VHS models with transcoding ability
- Choose models without/with freeze frame +field with adjustable strobe control
- Digital comb filter included in specs
- Digital internal sync generators assures compatibility with ordinary consumer equipment & with 'house' sync or industrial-grade gear with advanced sync
- Standard rack mount size

All Showline Spectrums have great specs:

0-5.5MHz bandwidth; full 8 bit quantization; 4:2:2 transparent processing at 14.318MHz (4Xfsc); S/N: >60dB & >54dB including quantization noise. . .plus more.

Darkroom Dexterity

28

A continuing series of tips, techniques, and tricks for creating more imaginative Amiga graphics.

By Joel Hagen

TO UNDERSTAND WHY creating a screen image is not necessarily the same as completing the finished artwork, consider this analogy from photography: As any photographer will confirm, the image on the negative is only the beginning of the creative operations that lead to the final gallery print. The work that goes on in the darkroom can radically change or subtly polish the finished image.

More and more, I am finding that this darkroom analogy applies to a category of creative processes I regularly employ with my Amiga artwork. To my delight, a new program, Art Department Professional ($199.95, ASDG) has greatly expanded my options in these "darkroom" operations and significantly enhanced the quality of my results. (The original ASDG image processor, The Art Department, was reviewed in the Sep. '90 issue, p. 84. Watch for a feature-length review of AD Pro next month in the July issue.) For the purposes of this column, I will simply describe how I used certain features of the program in the sequence of operations required to finish the painting "Deep Reef" (opposite).

If you do not own AD Pro, you can try many of these techniques in Digi-Paint (NewTek) using a combination of the Merge Screen and Transparency settings. The results will not be quite the same, however, as those of AD Pro's 24-bit manipulations.

Three-Layered Compositing

Knowing the capabilities of AD Pro, I planned the painting from the outset as three layers that I would eventually "composite" as transparent overlays. (If you follow this column regularly, you know that the technique of compositing images is one of my current favorites—see "Accent on Graphics," Nov. '90, p. 66, and Feb. '91, p. 58, for more on compositing.) The more I explore transparent compositing, the more I realize it is one of the unique capabilities of the computer medium. With AD Pro translating all my images into 24-bit data, I can then perform my manipulations at that depth before rendering the final image in the resolution and format of my choice. The AD Pro results are better than those obtained with any other software I have used to perform similar operations.

I painted the first image—the fish—in Digi-Paint 3 (NewTek) using techniques described in the Jan. '90 "Accent," (p. 40). I painted the fish against a solid black background so that by controlling Digi-Paint's transparency and hotspot settings, I could use that black to shade the forms and add a sense of dimension.

The second painting, also in Digi-Paint, is a colorful abstract of transparent shapes done with very bright saturated colors. I used saturated colors because I planned to overlay this image with the black background of the fish painting, thus knocking the colors way back.

For the third image, I used Digi-View to capture a black-and-white close-up of a stone covered with lichen. I wanted to incorporate the texture of the lichen into the painting as detail under the color, anticipating that the gray scale would reduce the intensity of the colors in the other two images.

Okay, Load 'Em Up!

Setting AD Pro's Load option to Composite, I loaded the abstract as the fist image. When the requester specifying amount appeared, however, I chose to load the image under No Composite—wanting it to be the starting point for my layering operations. I then loaded the lichen image, setting the mix to 50%. This caused it to merge with the abstract image so that equal emphasis was given to both. I displayed the composite as a 320×400 HAM image to test the result.

Liking the textured color, I was now ready to load the fish. I set the

A new image processor offers darkroom-like control over subtle variations in the color, brightness, detail, and texture of your finished artwork.

mix to 20% to bring the fish only faintly into the image. Also, by specifying black to be a transparent color in the loading image, I ensured that only the fish would merge with my textured background, leaving surrounding colors untouched. To specify black as transparent, I entered values of 0,0,0 in the RGB transparency settings. (These settings are for 24-bit color, so they range from 0 to 255. You can specify any color you wish to be transparent.)

To create my final layer, I loaded the fish again, but this time at a 30% mix with no transparent color (RGB settings of −1,−1,−1). This resulted in bringing greater emphasis to the fish while allowing the black background to subdue the colors of the surrounding abstract texture. Because these composites are calculated at 24 bits and then rendered to HAM, the results are quite clean.

In "Deep Reef" (above) ASDG's Art Department Professional was used to composite three separate images and then to make adjustments to the screen image in preparation for printing.

Smooth and Subtle Operators

There are a number of AD Pro "operators" that you can use to do further work on your image. (The manufacturer promises more of these operators in the future; you can simply add them to the program as they become available.) I used one such recent addition, the "blur" operator, to soften the present image. After that, I considered "Deep Reef" finished to my satisfaction as a screen painting.

I knew, however, that it was meant to be not only a screen image, but also a printed picture to accompany this article. This brings up a frequently encountered dilemma: Images always print darker than they appear on screen, even when you keep (as I do) your brightness and contrast monitor settings up at midrange. It is a difficult business adjusting images for print; sometimes it requires an act of faith to take an image you are pleased with and then tweak it into a bright, washed-out version to send off for publication. Yet that is often exactly what is needed to get good results in print. The computer artist must always think of the image in terms of its final output, not just how it looks on the screen.

AD Professional, however, offers some very sophisticated options in balancing and adjusting that final image. One of these, the "dynamic-range" operator. analyzes the image and notes the smallest and largest values contained in the color data. It then allows you the opportunity to select a new range of maximum and minimum values and to constrain or expand all the image data to that new range of values. This is a powerful feature once you get the feel of it.

My "Deep Reef" screen image needed to be lighter for the printed version. It had a range of color values from 0 to 238 out of a potential of 0 to 255. I entered a new range of 30 to 240 and executed the dynamic-range operation. The result retained all the image detail, proved faithful to the original colors at the high end, and smoothly raised the values of the darkest colors to where I hope they will print well.

Using AD Pro, I feel as though I am in my darkroom dodging a print and experimenting with sandwiched negatives. I'm hooked on the creative opportunities this program has opened up for me. Try it. ■

Applied Design Basics

By Mitch Wells

EXPERIENCED DESIGNERS KNOW that what works well with the printed page usually works with presentation graphics—provided you take into account the orientation of the viewer. When working with text screens, neophyte designers tend to either clutter screens with too much information or use type that is big and clunky. You can learn much just by considering tried-and-true standards and observing how they are implemented.

Take a minute to think about how type is laid out in quality textbooks and magazines. The size of the print assumes that the reader is within one to three feet of the page. Body type is usually 10–12 points in size (a point being $^1/_{72}$ of an inch) and is generally set in a serif typeface in both upper and lowercase letters. (A serif typeface has small strokes at the ends of the letterforms; the text you are reading right now, and the "Applied Design Basics" heading at the top of this page both use a serif face.)

Headlines are usually done in a 36–48 point font (note that this is three to four times larger than the body type) and are sometimes in bold. They are sometimes in all uppercase characters. (All uppercase text should be reserved for short text strings—such as heads and subheads—as it is more difficult to read than mixed cases.) Subheads are usually 18–24 points, bold, and usually in upper- and lowercase letters.

Words that are all uppercase generally use serif type faces, which are considered easier to read. Subheads are usually done in sans serif (sans serif faces do not have strokes at the ends of the letterforms; the word "Mastering" in the Mastering MultiMedia logo is an example of a sans serif font).

When determining which fonts to use, the place to start is with heads and subheads. In deciding on a size, first consider which resolution you will be working in. Keep in mind that the resolution of a monitor is *much* less than that of the printed page. Compensate for this by using the highest resolution available whenever possible and by anti-aliasing text (a technique that uses transparent pixels to smooth the jagged edges in computer graphics). Then consider your screen size; will one person at a time view your presentation on a standard 1084 monitor? How about a 20-inch monitor? Or, will your presentation be projected in a room full of people?

You can use the magazine-design standard for headlines as a guide when working with video screens. Headings containing two to three four-letter words typically occupy $^2/_3$ to $^3/_4$ the width of a magazine page. This is a good rule of thumb to use for presentations that are to appear on a single 14-inch monitor. Using a larger screen, $^1/_2$ to $^2/_3$ of the screen width is adequate. Limit subheads to one-half the width of a standard screen for four four-letter words.

Out-of-Body Experiences

I suggest you avoid anything resembling body text in a presentation screen—the type is just too small. If you cannot avoid it, I suggest you use a font no less than half the size of your subhead type and a type style that is appropriate for subheads. This essentially makes anything set in body text simply a smaller subhead. Also, keep your text as brief as possible and substitute graphics for text whenever possible.

Use a screen graph (discussed in "Mastering Multimedia," May '91, p. 74) to decide on placement for heads and subheads, and stick to these locations throughout your presentation. This will give it consistency. If you must use both a heading and a subheading on one screen, use some graphic element such as a rule or a line of bullets (evenly spaced dots) to offset the two when space permits. As with the heads and subheads themselves, try to place these graphic elements in a location that can be used consistently. If you plan to use more than one subhead on a screen, insert extra line spacing between them. It is best to use high-contrast colors for headings and mid-contrast colors for subheads—except when setting up a "build."

A build is the process of displaying a text list one line at a time. Say you have a list of three automobile manufacturers—Ford, GM, and Chrysler—that you would like to introduce individually onto your display screen. Using a build to display them, you would start by placing the word "Ford" in a bold, high-contrast color in the upper middle of the screen. In the next frame, you would add the letters "GM," also in a bold, high-contrast color, just below "Ford." At the same time, you would reduce Ford to a mid-contrast, nonbold subhead. Fi- ►

ARMOUR-GEDDON

Post-Holocaust: A power crazed entity desires control of earth. They develop an energy beam and intend to bounce it off a custom-built satellite back to earth . All unprotected life will be wiped out.

You select and control up to six diverse hi-tech vehicles at once in a race against time to seek and destroy enemy power lines and eventually knock out their beam generator.

Build up your arsenal by collecting enemy resources to help develop and create your own new weapon systems.

Featuring a sophisticated head-to-head serial link enabling 'being-there' realism between two players.

Armour-Geddon: Strategy and simulation synthesized to perfection.

Circle 310 on Reader Service card.

nally, you would bring in "Chrysler" just as you did GM in the last frame, and place it in the lower middle of the screen. GM, then, would shrink in size and color to match Ford.

The build sequence might end with all three words as standard subheads, leading on to the next screen of your presentation. Whether or not you use the build approach, putting a graphic element (like a bullet) before each entry and aligning the elements vertically make the list easy to read.

Color Guard

Color is probably the most complex element of any presentation, and yet it is the one that is often given the least amount of thought by beginners. Without going into too much detail, here is a list of things to consider when deciding on the use of color:

Readability — The clarity of your presentation *must* take precedence over the colors you might like to use. It is a fact that combinations of pure high-contrast color—such as pure blue on black or full red on blue—are hard to read. By all means, avoid such combinations. What works for video production works for presentation graphics. Simply avoid full-power colors—that is, colors with fully-saturated red, green, or blue elements (set all the way to 15 in DeluxePaint's palette).

Hierarchies — If elements of your presentation are related but vary in importance, use a palette that has combinations of colors in varying intensities. For example, in a 16-color palette, you might try using three shades each of red, green, yellow, blue, and grey, in addition to a background color (probably black). This not only allows you to show order-of-importance relationships (you could use all three reds on one screen, for example, to imply hierarchy), but also allows for color builds within text lists (that is, the use of more intense colors for emphasis, as in the build described above).

Association — When you see red, what do you think of? Fire, danger, financial loss, elements of great importance? Sure, that's why stop signs and fire engines are red. Too often, beginning screen designers use colors without considering what they might mean to the viewer. If you were doing a presentation to teach kids about recycling, what colors would you use? Probably varying shades of green (associated with grass and trees), blues (associated with sky and water) and yellows (sunlight) for positive elements. You could add browns (burnt wood, buildings) or reds (danger) to emphasize any negative elements. Remember that people everywhere associate color with familiar things—regardless of what you may want that color to portray.

Audience — Upscale audiences tend to like soft pastel colors; audiences of less sophistication react well to primary color elements; kids tend to like anything bright. When considering color, be sure to consider your audience.

Relationship and differentiation — Some color combinations make good design sense and others do not. Often, context makes all the difference in the world.

Certain colors are near each other on the color wheel (and are therefore called spectral neighbors). Blue and green, red and orange, yellow and green, for example, enhance one another well. These make good side-by-side combinations and imply relationship.

Because spectral neighbors do suggest sameness, you should avoid these color combinations when you want to differentiate elements within a presentation. Instead, use strongly contrasting colors (sometimes called triad colors), such as mid-tone red, yellow, and blue; or at least add opposite colors to elements of the objects. When you do use color opposites, however, try to distance them—that is, do not let them touch each other. If color opposites must touch, be sure they are not fully saturated. Full-intensity color opposites tend to visually "vibrate" when they are adjacent.

One of the trickiest color elements to use, but perhaps the most gratifying, is the multicolored background. The best advice that I can give here is to consider how the relationships of the colors in your background and foreground elements compare to the basics mentioned here. Don't feel limited by these guidelines—they have become standards only because they work effectively! ■

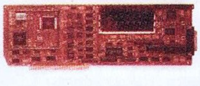
GVP Series II Accelerators

New single-board design on 22 & 33 Mhz

These new Series II accelerators have a built-in GVP SCSI controller
Now holds up to 32 megs of ram!*



22Mhz $939.00
33Mhz ... $1699.00
50Mhz ... $2399.00

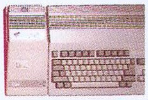
*50 Mhz board, others hold less

Great Valley Products Series II Hard cards for the A2000

Series II / No Drive $159.00
Series II / 52Q $449.00
Series II / 105Q $559.00

These are non RAM-capable, for RAM-capable add $50.00

Great Valley Products Series II for the Amiga 500



40mb $599.00
52mb $679.00
80mb $739.00
105mb $859.00

Sharp JX-100

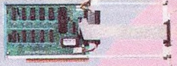
A portable color scanner.
200 dpi / 24bit color.
Includes Scanlab software from ASDG $699.00

HP Printers

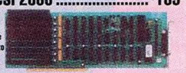
DeskJet 500 .... 469.00
LaserJet III 1499.00
LaserJet IIP 799.00
PaintJet 949.00
PaintJet XL 2049.00

New From ICD

AdSCSI 2000 .... $129.00
Hard card interface with unmatched speed and flexibility.



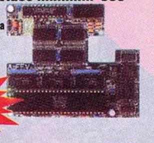
AdSCSI 2080 .... $189.00
Hard drive interface with up to 8 megs of FAST RAM.



AdSpeed $219.00
Best overall performance of any accelerator in it's price range.

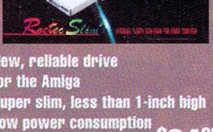
AdIDE $99.00
Smallest Amiga hard drive interface made. For IDE (AT) drives.

Flicker Free Video $309.00
Eliminates interface flicker for any Amiga computer. Does not use video slot.



Now lower prices!!!

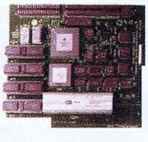
Roctec



New, reliable drive for the Amiga
Super slim, less than 1-inch high
Low power consumption
Drive pass-thru
$94.95

CSA

New, lower priced Mega-Midget Racers!



25 Mhz $499.00
33 Mhz $599.00
Ram Board with 2mb . $409.00
Ram Board with 4mb . $779.00
68882 - 25 Mhz $279.00

These Economy boards do not have an MMU

SupraRam 2000

2/8mb Board $199.00

Supra Corporation

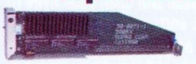
SupraRam 2000 4mb RAM 295.00
SupraRam 2000 6mb RAM 360.00
SupraRam 2000 8mb RAM 479.00
SupraRam 500 512k 61.95

Due to industry fluctuation, RAM prices are subject to change without notice.

Supra 500XP Drives

20mb with 512k $449.00
52mb with 2 meg $699.00
105mb with 2 meg ... $999.00

Supra Ram 500 RX



1Mb exp. to 8Mb.... $135.00
2Mb exp. to 8Mb.... $205.00

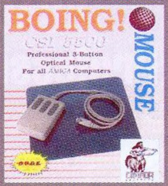
Centaur Boing! Mouse



This is the Best-Selling Optical Mouse for the Amiga

- Optical technology eliminates friction and momentum for super-precise handling
- No-moving-part construction for increased reliability.
- Middle button makes it compatible with A2024 software, X-Windows and UNIX.
- Easy plug-in compatibility with all Amiga computers.

Special: Now with a FREE D.U.D.E. (A $39.95 Value). Both the mouse and the Director Utility Dos Enhancer work on the Amiga 3000 and with System 2.0

ANNOUNCING ANOTHER CREATIVE COMPUTERS FIRST:

THE CREATIVE COMPUTERS DIRECT ADVANTAGE MASTERCARD™

USE YOUR DIRECT ADVANTAGE GOLD MASTERCARD™ ANYWHERE AND EARN DOLLARS GOOD ON EVERYTHING WE SELL!

- 1st Year Membership Free! Save $40
- Free Buyer Insurance
  The Direct Advantage MasterCard's Purchase Assurance protects most items you buy with your card against loss, theft, fire or accidental breakage for a full 90 days from the date of purchase.
- Double Manufacturer's Warranty!
  You'll automatically receive Direct Advantage MasterCard's Extended Warranty on almost every purchase, thereby doubling the manufacturer's warranty up to a maximum of one additional year.
- Bonus Points!
  Now, every dollar you spend for business or personal use with your Direct Advantage Gold MasterCard, earns points good toward the purchase of everything we sell - one penny for every two dollars you spend. It makes no difference where you use your card or what you buy - before you know it, you'll have thousands of points to redeem on the catalog item of your choice!
- Redeem points with a phone call!
  One quick call to the Direct Advantage customer service and redemption center is all it takes to turn your points into immediate savings on everything we sell. What's more, you'll receive a quarterly point statement to keep you up-to-date on the total points you've earned and used, and cardholder exclusive information on specials that we run.
- High Credit Limit
  Every Direct Advantage Gold MasterCard holder automatically receives a line of credit of up to $15,000!

Take advantage of this offer today!

Call 1-800-872-8882 to apply!

Announcing the Creative Computers Exclusive Money Back Guarantee Program (CC-MBG)

Now and through June 30, 1991, when you purchase any accelerators, floppy drives, memory expansions, hard drive controllers or Newtek's Video Toaster from Creative Computers, you are protected by a full 30-day, No-Questions-Asked Money Back Guarantee!

Are you in the market for a Video Toaster but don't know if it will work right with your set-up? Or are you waiting for your Amiga to compute but don't know what an accelerator will mean in practical terms to you? You need not wait any longer. Just buy it from us, and if you don't like it, send it back for a full refund!

CC-MBG rules: Limited-time offer only applies to above listed categories only. You must call Customer Service to obtain a Return Authorization number before sending the item(s) back. The item(s) must be in original condition and in original packaging. No damaged items will be accepted. Refunds issued within 14 days of receipt of the returned item(s). Refund is limited to $3,000 per customer.

Overnight service to Canada as low as $15

THE GAME PRESERVE

LEMMINGS

By Dodson Yaple

Lemmings are odoriferous arctic rodents notorious for periodic mass suicide. You'd think that would rule out computer-game stardom. But no—Psygnosis craftily transformed the mean-tempered ice-rats into lovable Pillsbury Doughboys with green hair and 78-rpm voices. These little guys are so darn cute you just can't help wanting to save them from self-destruction. That's where your problems begin.

Lemmings ($44.99) looks like an arcade game, but it's more a series of puzzles: Save a specified number of the cuddly creatures within a given time limit, or else repeat the level. You manage the action by bestowing various skills on individual lemmings, enabling them to construct bridges and tunnels that divert their less-gifted buddies to safety.

Icons across the bottom of the screen represent the skills at your disposal: climbing, parachuting, traffic control, bridge building, demolition, and three kinds of digging. Select a skill, then click on the desired rodent, and that lemming will do as you command. The others, however, will cheerfully plunge to their doom at every opportunity. When so many of the contrary little vermin have reached room temperature that you can no longer succeed, you have to reset with the apocalyptic Nuke 'Em option and try again.

Dig and climb and jump and live.

Lemmings' graphics and sound are polished, but unambitious. What it lacks in flash, however, it makes up for in comfort: Smooth and addictive, it includes a fast restart option, instant access to any level you've already seen, and a nifty two-player mode with 20 levels of its own. The program detects and uses extra memory. It recognizes an external drive and minimizes disk-swapping on single-drive systems. The only rough edge is the DOS-based copy protection.

To make sure you experience plenty of stress and frustration, Lemmings increasingly restricts your use of the most helpful skills. The screens get so tough that you think there must be design flaws. Goofy music drones on relentlessly, subtly lowering your intelligence. By level 50, you're considering suicide yourself. . .and level 51.

BAT

By Peter Olafson

BAT (short for Bureau of Astral Troubleshooters) is a delightfully different graphic adventure with a science-fiction theme. At first glance, this long-awaited game from France's UBI Soft looks like a computer comic book or ►

To locate developers of the games reviewed, see the manufacturers' addresses list on p. 88.

Crib Notes

By Peter Olafson

DID *EVERYBODY* GET *Shadow of the Beast II* ($59.99) for Christmas? No sooner do I answer a stack of Beast mail (see the March '91 Crib Notes), than a fresh supply of questions arrives on this supremely difficult Psygnosis arcade-adventure.

A number of people are perplexed over what to do with the shard of stone remaining after they used the crane to drop the slab on the spike. Play Wile E. Coyote, that's what. You'll need to push the stone over to the lever to the right, then climb the rope to roughly. . . (well, you figure it out) and jump on the lever. Then get over to the lower elevator in time to be lifted up to Ishram the dragon.

No, you can't get back out of the marsh the way you came, and so you shouldn't visit it until you are prepared to cross the ocean. To do that, you'll need the horn that summons a sea creature. The horn doesn't come easily. You must have handled the giant by the bridge in just the right way. (Don't fight him. Play hard to get, and coax him onto the bridge.)

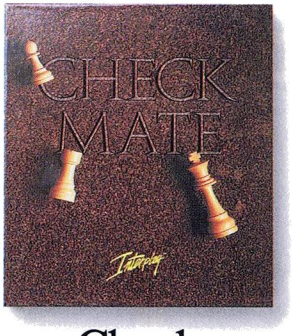
You'll want to investigate the breach he's created. There aren't a lot of options down there, but you'll need to be fearless in your jumping and aggressive with the little dragon-like creatures. (Use the old man's weapon. There's also a healing potion somewhere down there if you run into trouble.)

If you can't come up with 36 gold pieces for the snail—six chests with six coins each—your game is over. A number of people have found only 24, so here's a quick rundown on where to find them.

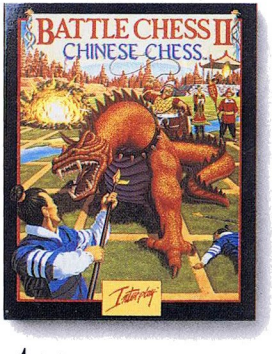
There's one chest in the Keep; one just below the abode of Barloom the dragon; one through the Pygmy Forest, upstairs and to the

Continued on p. 72.

FOR THE BEST IN CHESS, MAKE THE PERFECT MOVE.



Check.



And Mates.

The Royal Game of Chess will never be the same. Interplay Productions now challenges you to choose from three different chess programs, each offering its own unique blend of stunning animation, spectacular sound, and powerful algorithms designed to test your tactical and strategic thinking.

- **Checkmate™**, winner of the 1990 World Personal Computer Blitz Chess Championship in Lyon, France, is so powerful that *Amiga Games Guide* called it *"easily the strongest-playing chess program yet for a personal computer."*
- **Battle Chess™**, a SPA award winner for best graphics, brings chess to life by combining a magnificent chess logic system with colorful, humorous, and dramatic three-dimensional animations. *Video Games & Computer Entertainment* went so far as to call it *"the next step beyond all existing chess programs."*
- **Battle Chess II: Chinese Chess™** uses even more animation and sound than the original **Battle Chess™** to bring the world's most widely played version of chess to the West. *Computer Gaming World* called it *"a feast for chess lovers which will leave you wanton to play again 15 minutes after each game!"*

All of Interplay's chess programs have 2D or 3D graphics, multiple levels of difficulty, and allow a choice of opponents (computer, face-to-face, or modem).

If you're looking for a challenging opponent, want to find a program that'll teach you or your children how to play, or just experience some new twists on strategy and tactics, Interplay has a game for you.

Interplay chess programs.

Whatever your game, make the perfect move.

To order, call 1-800-969-4263.

graphic novel. Each new scene in the domed alien city of Terrapolis doesn't replace one before it, as in most adventures of this type, but is placed beside it in a new window.

Small scenes hide big surprises.

Looks can be deceiving, and BAT ($49.95) usually isn't that simple. For instance, you might think that these scenes—most of them small, but striking—were simply static backdrops until an animated, spidery robot wanders across the room, or a rocket takes off, or an elevator heads up the side of a building, or an alien ear twitches. It's a charming touch, if only window dressing, and it's only the beginning. You can hardly move your mouse pointer across a screen without it changing shape to show the range of actions available at a given spot: a cartoon bubble or talking head for discussion, a bottle for drinking, an arrow for a way out, and so on.

That fidgetiness of environment and a pleasantly high level of interactivity (there's almost always something to click on) go a long way toward making BAT great fun. There's also a lovely assortment of little toys to explore. You'll use telephones, food dispensers, a Simon-like arcade game and a four-function computer (named BOB) installed in your left forearm.

Once you've explored the city, there's a "dungeon" (an even more dangerous underground city) and a three-dimensional environment over Selenia's inhospitable desert, which you'll negotiate in a pilotable aircraft called a DRAG. Variety and acronyms are the spice of BAT.

The story is another James Bond variant: You're a secret agent, punching his one vague lead in an attempt to catch a mad scientist who is threatening to destroy the planet unless it's turned over to him in 10 days. You'll probably need BOB to get to him, and the Biodirectional Organic Bioputer is one of the little pleasures that makes BAT worth investigating. It's one of a scant few games to incorporate programming within the game, and the first I've seen to do so successfully. You can use a simple if-then language to create what are essentially complex macros.

Now, on the down side, it's difficult to finagle your way out of some screens, and Amiga-owners trained in left mouse button clicking may be frustrated to find that often this brings up BOB when you least want him. (Mouse placement needs to be quite precise.) Finally, as big and varied as this two-disk world is (and it's huge), the game sometimes has a confining feeling.

The Amiga Primer

NEW!

Anyone with an Amiga — whether a new owner or an experienced user — will find this easy-to-follow video invaluable. Applicable to all Amiga models, The Amiga Primer presents System 2.0 and AmigaVision™ the Amiga Workbench, the CLI, peripherals, and utilities in an entertaining format with vibrant graphics and upbeat music. There's no easier way to master your Amiga!

#TMAP 90 minutes ~~$29.95~~ $24.95

NewTek's Video Toaster

NEW!

The Video Toaster™ from NewTek is hailed as the world's first video computer card enabling broadcast-quality production on desktop. Whether you are considering the purchase of a Toaster™ or are just curious about all the excitement, the Video Toaster™ video tape provides in-depth information such as:

- installing the Toaster™ in the Amiga 2000
- adding and testing other essential equipment
- selecting source material and processing speed
- manipulation of many digital video effects including flips, tumbles, mirrors, spins, splits and titles
- producing 3-D animations
- painting on video images

See for yourself what the amazing Toaster™ can do!

#TMVT 45 minutes ~~$24.95~~ $19.95

Animation Video Volume II

NEW!

Long-Awaite Volum II

In response to the clamor for another Amiga animation videotape, the AmigaWorld editors have created Animation Video Volume II. After sifting through hundreds of contest submissions and viewing countless hours of animation clips, the result is a showcase of scintillating animations, technical brilliance and imaginative plots. You'll be thoroughly entertained as you absorb new techniques and ideas. Whether you just brought your Amiga home from the store or have created your own animations before, you'll want to add Animation Volume II to your Amiga video collection!

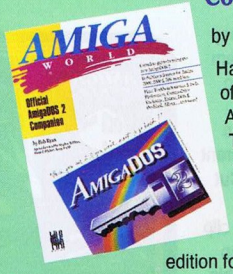
AMIGA BOOKS

New Edition!

AmigaWorld Official AmigaDOS 2 Companion



by Bob Ryan

Harness the power of the new AmigaDOS 2! The Amiga Companion is back — in a revised and expanded edition for AmigaDOS 2. It's your expert guide to the new DOS, filled with hundreds of instructions, tips & techniques not found in any other book.

Covers:

- The Amiga OS, including Workbench, Shell & ARexx
- The Workbench GUI
- Workbench menus and tools
- The 13 Preference Editors
- The Extras 2 disk
- AmigaDOS — handling disks, files & devices
- Configuring AmigaDOS
- Manipulating files with Copy, Delete, MakeDir, Rename
- AmigaDOS command scripts and shortcuts
- The ARexx macro language and a fully annotated program to customize
- Plus over 100 screen shots, command references, a valuable glossary, and an error code summary for solving problems more easily!

#1-878058-09-6 416 pages **$24.95**

NEW!

AmigaWorld Official AmigaVision Handbook

by Louis Wallace

Express your creativity on the Amiga — with this complete guide to the new AmigaVision! The only authoritative guide to the hottest program for your Amiga. Written in an easy-to-follow style and heavily illustrated, with over 150 screen shots, this book provides a step-by-step primer for mastering AmigaVision.

Special Features:

- What exactly multimedia is, the art of authoring, the basic menus, common requestors, and program editing information
- Control commands covering: interrupts, database icons, wait icons, audiovisual icons, and module icons
- In-depth editors, tools, and programming information
- Valuable appendices filled with advice on the best hardware and software products for AmigaVision, and a special guide to version 1.7.

TECH JOURNAL

Your source for advanced technical information

Whether you're a programmer or a developer of software or hardware, you simply can't find a more useful publication than this. Each big, bi-monthly issue is packed with fresh, authoritative strategies and advice to help you fuel the power of your computing. In every issue of **The AmigaWorld Tech Journal** you'll find:.

- Practical hardware and software reviews
- Step-by-step, high-end tutorials on such topics as 3-D graphics algorithms and implementations, handling HAM, C compilers, and more
- Good programming practices to help you make the jump from BASIC to C, or C to assembly, or tie everything together with ARexx
- Tips, news and tools covering commercial software, books and talk on the networks
- Programming utilities from PD disks, bulletin board systems and networks

PLUS! Each issue comes with a valuable companion disk, including executable code, source code and the required libraries for all our program examples — plus the recommended PD utilities, demos of new commerical tools and other helpful surprises. Order your one-year (6 bi-monthly issues, plus 6 invaluable disks) Charter subscription to The AmigaWorld Tech Journal for the special price of $54.95. That's a saving of $35.75 off the single copy price! MONEYBACK GUARANTEE. If at any time you're not satisfied with **The AmigaWorld Tech Journal**, you're entitled to receive a full refund—no questions asked.

The AmigaWorld Tool Chest

Quality Software at an Affordable Price

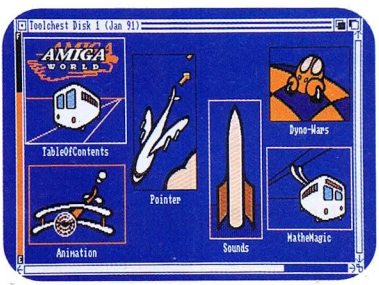
BUY 2, GET 1 FREE!

$12.95 $12.95 ~~$12.95~~ FREE!

Buy any two AmigaWorld Tool Chest back issues, and get a third one FREE!

#TC11. Fix corrupted disks or recover accidentally deleted files. Sit back and enjoy original animation and sound clips. Enjoy colorfully wacky, shoot-'em-up arcade fun. Create single- or double-image icons, in four to eight colors. Get a rich assortment of HI-RES clip art monsters. ■

#TC12. Save money with a utility program that enables you to format disks that AmigaDOS chokes on. Generate different types of graphs. Cut out an excellent collection of B&W clip art for your desktop publishing or graphic design needs. Generate an incredible assortment of colorful patterns. Add dazzle to your animations with detailed 3-D spaceships. ■



#TC13. Plot your biorhythms. Make drive-head cleaning easier. Create spectacular images with Mandelbrots. 3-D objects perfect for ray traced animations. A CLI utility to help you find files quickly and easily. Plus holiday clip art, an AmigaFlight animation, and a technical discussion on how AmigaDOS stores information to disk. ■

#TC14. A 3-D graphics special issue, containing vector objects, TicTacToe, a graphing program, and 3-D ray traced animation. Keep names and addresses organized with a friendly database and address book. Perform an analysis of digitized sound and display it in a graphic manner. Get B&W clip art food images suitable for desktop publishing. ■

#TC15. A best-selling issue! Combine great graphics with digital sounds to get an entertaining Amiga version of the classic connect-the-dots game. Insert a nice assortment of digitized animal sounds into your animations. See an instructive rendering of Cartoon Man in various stages of animation. Test your reflexes with a high-speed arcade game. Make multiple copies of custom labels. ■

#TC16. Generate complex 3-D vector objects of a wide variety of terrain, from flat plains to rocky mountains. Plot out mathematical equations. Format your text files to print on both sides of the paper. Plus six digitized sounds perfect for animations and multimedia presentations and a mouse-driven graphic adventure game with excellent digitized sounds. Also includes Tinyball, "The World's Smallest Baseball Arcade Game." ■

#TC21. Battle your computer to take over the planet Circe. Assign RGB values to printer and screen output. Get a powerful database manager suitable for home and small business. Create animated sprites by editing up to 100 frames at once. Execute CLI programs, batch files and ARexx scripts with the simple click of a gadget. ■

Circle 275 on Reader Service card.

From p. 60.

Communication is not BAT's strong point. You can ask nonplayer characters three set questions, plus the time, and their answers quickly grow repetitive. (The game could use a parser.) Combat is essentially a quick-draw. Some of the most enticingly elaborate scenes have disappointingly little interaction.

Nevertheless, I think this BAT flies. There's too much going on here to ignore.

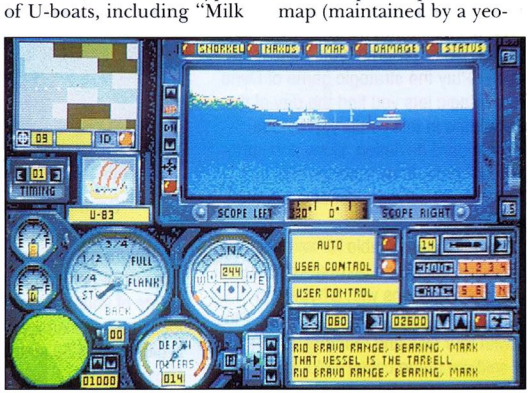
WolfPack

By David T. McClellan

A solid World War II U-boat and convoy simulation game, WolfPack ($54.95, Broderbund) puts you at the helm over a long and dangerous campaign. You play the wolfpack commander (over several types of U-boats, including "Milk Cow" resupply subs) or the convoy commander (over merchant ships and destroyers) against the computer or a friend (with the computer handling the controls and scoring) in the opposing role.

A game runs to one of of four conclusions: a preset time limit runs out, some portion of the convoy makes it to its destination, or one or the other side is totally destroyed. You'll need a least one megabyte of RAM and several open evenings to play (with many beers and salami sandwiches for sustenance), but the game is definitely worth it.

The screen is a detailed view of a U-boat or destroyer control room. At hand on both U-boats and destroyers are engine-room telegraphs (speed), rudder and compass-heading displays and controls, a depth indicator, a pannable views-creen or periscope, a tactical map (maintained by a yeoman), fuel indicators, gunnery and other weapon controls, an order/status log, a vessel ID (used for switching between vessels of your command), a hydrophone display, and vessel-specific controls. To enhance the realism, some of the controls and displays aren't available before given game-years. For example, hedgehog mortars weren't seen on destroyers until 1942.



Just like the real thing, only drier.

When commanding a specific vessel, you can alter its course, speed, and depth (for U-boats); make ready and fire weapons, listen for enemy targets via hydrophone, sonar, or radar (and detect those looking for you); or give orders to the vessel's captain and ►

WANTED

A few good thieves, healers, warriors and spell casters to join our hardy band of adventurers on the GEnie(sm) service. Must be devious and daring, cunning and courageous. Ready to slay dragons or raise flagons. And able to emerge from perilous encounters in the darkest tavern or wood with both your person and your reputation intact.

Sign Up Now

If you're ready for adventure on Gemstone or any of our other twelve exciting multi-player games, sign up for GEnie today. Here's how.

1. Set your modem for half duplex (local echo) at 300, 1200 or 2400 baud.

2. Dial toll free– 1-800-638-8369. Upon connection, enter HHH.

3. At the U#=prompt, enter XTX99470,GAMES then press RETURN.

4. Have a major credit card or your checking account number ready.

For more information in the U.S. or Canada, call 1-800-638-9636.

We bring good things to life.

shift to another vessel in your command. Orders include anchoring, patrolling an area (U-boat or destroyer), shadowing (U-boat shadows a surface vessel), and joining or leading a convoy (destroyer or merchant ship).

Both sides have a variety of captains for you to issue these orders to—some will follow orders blindly, some will adapt them conservatively to the situation, and some are blood-and-diesel warriors who will break orders to attack a target. Because you can directly control only one vessel of your fleet at a time, you'll need to tailor your strategy around your captains and what you expect the "other side" to do.

Situations can change quickly; game time can go from real time to 64 times faster, but combat is always real-time, and that's fast enough, given all you have to control and avoid. After you learn the controls and displays (handled via the mouse or keyboard), controlling a U-boat or destroyer becomes more natural, and your tactical and strategic mapping displays help you wage the war. It's great to sink enemies and watch your overall strategy come together as your other commanders carry out your orders while you move around.

WolfPack's manual is quite complete. It begins with a brief but interesting history of U-boat warfare from 1939 to 1944, and devotes chapters to overall game play, running U-boats, commanding destroyers and convoys, and designing missions. There are also sections describing the pre-designed set of a dozen missions which take place from the Caribbean to Iceland to Gibraltar, the captains and their personalities, the U-boat and destroyer types and capacities, and weapons and sensor capacities year-by-year. You'll need to keep the manual handy not only for the quick-reference chart of keyboard commands, but also because the game employs look-up copy protection.

I've been playing WolfPack for over a month, and the excitement hasn't worn off yet. If you like tactical simulation games, put this one on top of your stack. You'll reach for it often.

WARLORDS

By Peter Olafson

With both good looks *and* brains, Warlords ($50, Strategic Studies Group) is a princess among strategy games. A fantasy wargame, it pits you against any combination of up to seven friends or grumpy computer opponents (at four difficulty levels) in the conquest of the sprawling land of Illuria.

The basic idea is to take as many neutral cities as quickly as you can, and to gear their troop production toward subduing your opponents one at a time. Warlords is not quite a typical wargame, however, as it has some rather adventure-like elements. The heroes (scrappy armies in themselves) may search ruins and temples (little rooftop air-conditioning units) to find treasure, allies, and 14 magical artifacts that are handy in combat. Sages, and sometimes libraries, have useful information, as well. (Mind, this is rather like putting a quarter in a slot machine. You simply order the hero to search and are told the results.)

Warlords looks nice and sounds great. The map is large, colorful, and well-designed. The closeups of dif- ►

A WHOLE NEW WORLD OF POWER

NOW WITH THE NEW SYNCRO EXPRESS MK III

FOR ONLY
$ 69 99

+ $4 SHIPPING & HANDLING

NOW YOU CAN BACK-UP ANY DISK IN AROUND 30 SECONDS!!

❑ YES IT'S TRUE!! SYNCRO EXPRESS IS A HARDWARE/SOFTWARE SYSTEM THAT WORKS WITH "DIGITAL IMAGE COPYING". THIS IS THE METHOD THAT COMMERCIAL DUPLICATORS ACTUALLY USE TO MAKE THE ORIGINAL FROM THE MASTER DISK. DATA IS TRANSFERRED AS RAW DIGITAL INFORMATION.

❑ UNMATCHED PERFORMANCE!! It's hard to draw comparisons between Syncro Express and old fashioned Disk Copiers. Because they use parameters, they are almost guaranteed NOT to copy your latest purchase since parameters are not made available until several months after the release. But with the Syncro Express image copy method you can get a backup of all the latest programs, including blockbusters and utilities, quickly & easily. Start protecting your software investment NOW!!

❑ Menu Driven Control Program couldn't be simpler!! Select Number of Tracks, and that's it!! Don't be mislead by outrageous claims for "Nibbler" programs. This system can guarantee success by using the very Hardware/Software techniques that made the original!!

❑ Now with a *SUPER POWERFUL* "SYNCRO" MODE that actually synchronises your Disk Drives for even greater accuracy!!

❑ Can be switched OUT when not in use - totally transparent. ❑ Make up to 2 copies simultaneously*. ❑ At least one External Drive required.

PLUS MANY NEW FEATURES INCLUDING ...

❑ DRIVE SPEED CHECKER - now you can check the speed of your drives - DFØ-DF3. Easy and very accurate.

❑ DISK TOOLKIT - Syncro III now includes a range of Disk Tools - Fast Format, File Copy, Hard Drive File Copy, Ram Disk, Disk Rename etc. etc.

❑ Easy to use.

Why will Syncro Express succeed where others fail?

❑ Some programs now have very sophisticated protection including long tracks, Incryption, etc. But remember, whatever the programmer comes up with, the disk then has to be commercially duplicated. That's where Syncro Express beats all others - it transfers data at MFM/TTL level, just like the duplicators.

POWER BY DESIGN

❑ Syncro Express is designed in Europe where "Digital Image Copying" is the present sensation. This device, with it's own custom chip, goes even further by offering a complete system for under $70!!

❑ Manufactured in our European facility using the latest Surface Mount Techniques - Syncro Express is warranted for 6 months against manufacturing defects.

Announcing the Spring/Summer '91 Virtual Reality Labs Product Line!

NEW! — **Vista 1.2** (1 Meg NTSC or PAL)

Create real world landscapes — addictive fun!

No more foreground polygons with Gouraud shading! More realistic looking. New "Tree" function increases realism.

Intuitive controls — new, improved manual. Make fly through animations!

Why settle for 2-D "wallpaper" landscapes when you can explore real places and over 4 billion imaginary fractal landscapes in 3 dimensional space? List price only $59.95!

More than a thousand real landscape expansions are available now. Call or write for our brochure. Too much to list! Imagine constructing and exploring a perfect scale model of Yosemite or Olympus Mons Mars on your Amiga! Inexpensive upgrade from 1.0 available to registered owners.

Distant Suns 3.0 (1 Meg NTSC or PAL)

Award winning Planetarium Program for the Amiga.

Recreate the night sky on your computer — any place on earth, any time from 10,000 years in the past to 10,000 years in the future. What did the night sky over Baghdad look like the night Desert Storm was launched? What was in the sky the night the Allies crossed the English Channel on D-Day? What did your birthday sky look like in the city where you arrived, or what is in the sky for viewing next week? Distant Suns allows you to click and identify thousands of objects (over 10,000 if you purchase the 2 disk NASA skymap expansion). Information tells the viewer the star type, magnitude, location on the celestial sphere, and distance in light years. Draw the constellations, identify the deep sky objects, display over 213 deep sky objects (if you own the Deep Sky Objects expansion disk). Distant Suns contains dozens of other useful and entertaining features. Only $69.95 for this amazing and easy to use key to the universe.

NEW! — **Vistapro 1.0** (3 Megs NTSC or 3.5 Megs PAL)

The Professional version of Vista — T.V. Broadcast Quality!

Vistapro is an immediate hit with professionals and serious hobbyists around the world! Produces absolutely stunning high res overscan landscapes in any output mode available on the Amiga. Easy interface and tutorial loaded manual. If you can display 24 bit color, Vistapro is an awesome tool for quickly producing broadcast television quality images and flythough animations. Vistapro is shipped as "standard equipment" with the Impulse Firecracker. Also works with the Toaster, DCTV, HAM-E, and Mimetics frame buffer. Compatible with Imagine, Turbo Silver, and Art Department Professional. More than a thousand landscapes now available as expansions. Upgrades from Vista are available for registered owners. Vistapro is major league fun for power users. List price: $149.95.

ferent troops—griffins to cavalry to light infantry—provide even more flavor. The game is full of digitized sound effects, musical flourishes and cues, so you always know what's going on.

Even if you don't, it's simple to keep track. Several status screens show your position relative to those of your opponents. Commands are easily entered from pull-down menus or by clicking on buttons or the map. But be prepared: the computer opponents aren't the usual dopes. Leave a castle vacant, and they'll try to plant their own armies in it.

On the other hand, Warlords is rather slow on a 68000-equipped Amiga (it does run under 2.0). If you're well into a game and using the "observe" option to keep track of your opponents' moves, you can catch up on your reading between turns. Likewise, the screen scrolling is on the bumpy side, and there's a distinct pause between the issuing of a command and the computer's response.

While there are lots of features, some could use refinement. The save-anytime option is convenient, but it permits a save-and-then-attack technique that pretty much amounts to cheating. The ability to focus production from up to four cities at a fifth city is a handy way to automatically build up forces at a given point, but there's no "map" mode to show the full production network. You don't need to lead each army by the hand; if you simply click on the destination, it seems to find the path least costly in movement points. If the destination is more than one turn distant, however, it won't complete the trip. If Warlords is a princess, I guess this means she still has to have her nails done.

From p. 58.

left, and another up and to the right in this same general area; another in the Crystal Caverns; and the last on the route to the Karamoon Oasis.

Some folks are getting dumped into the sewers when the goblins raise the drawbridge in the caverns, and that means restarting. You can't get past the stone door when the bridge is going up, so get on the drawbridge as quickly as possible and kill the fellow who's running the winch. Once that's settled, take care of the other enemies and have a bash at the door.

Getting out of your cell should be simple if you've collected the booze from the Oasis. Give it to the guard. Once he conks out, use your mace on the door and do him in for a key. (You should also have found a key on your way in.)

Another common problem is finding the old man's ring. Well, the ring's not far away at this point. Just head up and to the left. On your way out, don't rush to be first. Stay a bit behind the prisoner—you *did* release the prisoner, right?—and the going should be a bit easier.

Other readers keep getting dumped in an acid pool (up and to the left of the starting point) when they push one of the two switches on the wall. Wrong switch! You can get the right one by saving the man who's being lifted away by a demon, and having a chat with him on that subject.

- I've also had a number of questions on the original *Shadow of the Beast* ($49.95)—typically complaints about the short life of the first enhanced weapon you find. If there's a trick here, it's simply not to waste good weapons on minor monsters, but save them for the colossi. Know where you're going, get there fast, and be sure you have the best weapon available. If you've made it to the graveyard, as several readers have, well, you're almost done. Just head right and beat on the giant's toe.

Feel free to write by US mail to 12 W. 104th St., Apt. 3E, New York, NY 10025, or via E-mail on GEnie to P.OLAFSON or on People/Link to Peteroo. Send a SASE if you'd like a personal reply. ■

IN 1972, AN ELITE AIR CORPS FLEW OVER VIETNAM. FLY WITH THE BRAVE AND THE BOLD.

Feel the adrenaline kick in as you scream down the carrier runway. You're up! And so is your squadron of F-4's. Now nothing can stop you —except the deadly fire from those MiG 21's, SAMs and anti-aircraft flak.

Experience the raw emotion and harrowing danger of intense air combat over North Vietnam in this simulation based on Stephen Coonts' best-selling novel, *Flight of the Intruder*. Authenticated by Vietnam pilots who flew in the Linebacker Campaign of 1972, you won't find any other simulation so like the real thing.

Off you go to adventure, danger and excitement.

Zero in on the MiG, before he zeros in on you.

Mission accomplished! Now back to Yankee Station to plan your next attack.

Select from multiple missions or map out your own using the mission creator. Control up to eight aircraft during one mission (four A-6 Intruder bombers and four F-4 Phantom fighter interceptors.) Switch from the A-6 to F-4 cockpit anytime. Thirty-four different targets provide new challenges every time you take to the sky. Aerial photos provide a preview of the target zones. For continuous challenges, choose from 16 variables to determine the level of difficulty. Get Flight of the Intruder™ now and watch for the full-length motion picture coming this summer.

Why buy mail order from Briwall?

1. Technical expertise to help you make the right decision. Buying the right product isn't easy. The broad selection makes it tough enough but new versions, compatibility problems, and functionality issues make it even tougher. We don't just take your order; we work with you to match your needs with the right products.

2. Pretested products to help ensure that your purchase works. Our in-house, trained technicians pre-test memory boards, hard drives and many other products before they leave our door. When you get it, it works.

3. Technical expertise to help get your purchase up and running. Hardware peripherals are not always easy to get running. So we won't abandon you after the sale. We offer a free technical installation service for all hardware items. If you need us, call us and we'll walk you through the set-up.

4. Warranties and guarantee. Buying mail order can be intimidating but we make it easy and safe. We guarantee that if your purchase doesn't run on your system, we'll work with you unitl you are satisfied. We also offer an extended warranty program, so call for details.

Our personal services help you pick the right product and get it running on your system quickly.

PRINTERS

You want your good ideas to look good on paper too, so you need a printer that shows them off. But print resolution, available printer drivers, and the software you're using all affect which one is best for you. Tell us your needs and we'll be happy to help.

From p. 18.
separate part. You then reassemble the entire object at the end. This works, but it takes some time.

In another vein, Imagine's quad-view is very versatile. By simply clicking on each of the four views, you can instantly make the image expand to fill the screen. The "fourth" view in hidden-line perspective is wonderful. There are, however, a few things about it that are hard to get used to. One minor aggravation is that the orientation of the x, y and z axes is not standard. Geometry classes and 3-D programs almost invariably have x as the horizontal axis, y as the vertical axis and z as the depth axis. Imagine makes z the vertical axis and y the depth axis. You just have to become accustomed to this variation on the norm.

With regard to the other three views, Imagine's tri-view is also a bit difficult to get used to if you're coming from the Sculpt camp. In general, most 3-D model-editing programs allow you to work in three views in isometric, non-hidden line perspective. It can, however, be quite difficult to work with. As your scene becomes more and more complex, you can easily lose track of where you are, and quite often the lines on the screen can play tricks on you.

Sculpt provides both a place marker and a secondary pointer to help keep track of things as you work. It also allows you to work on a limited area without other background or foreground objects getting in your way. With Imagine, however, all of the three views are to infinity, so that the whole object may appear big as life in one view, but be completely out of the other two views.

There are times when seeing to infinity in a view might be valuable—if you had a long row of small things to line up, for example—but in most cases, a more limited view is preferable. It would be ideal if you could toggle between the two.

Imagine does have a Hide Points mode that addresses the problem of confusion of overlapping objects, but you first have to zoom way out and hide *everything* so that all three of your views will be clear of other points. After editing that small area, if you then want to work on some other confined region that is now hidden, you must reveal all the points, zoom out, and hide everything again.

Much as I gripe about these few things, Imagine is on the whole the most comprehensive 3-D program I have yet seen for the Amiga. With many of its difficulties, it is simply a matter of getting used to a new way of doing things. In addition, it's nice to know that Imagine is a living, breathing program (unlike Sculpt) and that Impulse is firmly behind the Amiga and will support it with upgrades for some time to come. Imagine is a great new member of my 3-D team, and I have a feeling that there is yet a lot more for me to discover here.

YOUR TURN!

So far, I have found that Imagine is a major improvement over Turbo Silver in the areas of user interface and animation support. It retains Turbo Silver's superb control over surface characteristics and beautiful rendering capabilities. The only remaining weakness is the documentation, which is still not as good as it should be for a product of this complexity. Impulse somewhat makes up for this by providing very good telephone support.

Overall, I am very impressed with Imagine, and I relish every opportunity I have to work and play with it.

Fred Petty
Florissant, Missouri

IMAGEFINDER

One picture is worth a thousand instructions.

By Michael Hanish

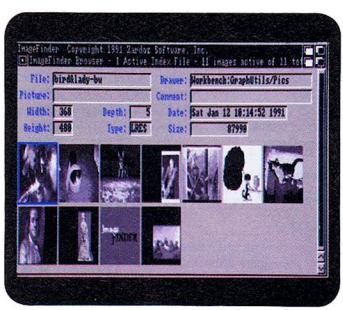
ANYONE WHO WORKS with Amiga graphics in any way has probably at one time or another been desperate to find where, among all his storage disks, is that one picture he needs. ImageFinder, a specialized database for indexing and sorting pictures, is designed for just such an occasion.

ImageFinder ($65), from ***Zardoz Software***, analyzes any Amiga bit-mapped graphic file you throw at it, in any resolution or screen format and at any depth from 1 to 24 bit planes—even a specified frame of an animation. It will sift through a list of directories and/or disks and give you a neatly displayed visual database (index), with a small thumbnail icon for each image. With the database open, you can sort the pictures by any number of criteria, display the full image (using the viewer program provided), and multitask with a paint or image-processing program. Virtually all the parameters of the program's operation are user configurable.

You can load ImageFinder from Workbench or configure it within your startup sequence for execution during the initial boot. It resides politely in the background until you activate it with a hot-key combination. When you select one of the thumbnails on the main, or Browser screen, the image's "vital statistics" are displayed in the parameter boxes at the top of the screen. These include file size and format, depth in bit planes, date created, color-sorting information and comment. (You can append a comment to a graphic file, however, only by using the AmigaDOS Filenote command. I would prefer to do it from within the program.)

GETTING AROUND

Using one of two configurable hot-key combinations, you can invoke a number of other quick and useful actions directly from ImageFinder's Browser screen. If you press the Shift key and click on a thumbnail image, ImageFinder displays the corresponding full-size picture—as long as it is present within the system. ImageFinder includes a fast and compact display program called "IView" specifically for this purpose. Other hot-key combinations bring the Browser window to the front or insert the name of the currently selected file into another program's open requester.



Your images cannot hide from ImageFinder.

Creating an index involves only a few steps. First, set up a scan list of all the directories and/or volumes for search and analysis via two simple requesters. Then, give the index a name, path location, and parameters (size of ►

Circle 248 on Reader Service card.

thumbnail, reduction method, number of colors). The scan begins automatically and continues until ImageFinder searches and analyzes all the specified locations—or until aborted. You can add to or delete images from an index with the same ease.

The time an analysis takes depends on the thumbnail parameters, the size and complexity of the file, and whether or not you have an accelerated system. From my hard disk, I fed ImageFinder a directory of eleven pictures of mixed format, complexity, and number of colors, and it took 25 minutes to build an index using the stock processor. The same process took about five minutes when the system was in 68030 mode. The program certainly does not feel sluggish in any way; it just benefits greatly from an accelerator.

Sorting is a straightforward process. The program sorts for two distinct purposes: to set the order in which the thumbnails are displayed, or to select a smaller group of images from the index. You control the sort through three sort requesters (one each for sort by file information, picture specifications, or color). This, by the way, happens at blinding speed.

ImageFinder has an ARexx port and is able to launch commands through a simple selection from a pull-down menu. This makes it quite feasible to use the program as the visual front end for more complex and less graphically oriented applications, such as catalogs or information services.

YOUR TURN!

Once in a great while, a program comes along that fulfills its promise—and then some. ImageFinder is a most extraordinarily flexible and ingenious program that removes the drudgery and disorder from dealing with picture files. It is visually interesting and fun to use, as well.

Barry Voroba
Minneapolis, Minn.

The program comes on one nonprotected disk, installs easily on a hard disk, and works smoothly under Workbench 2.0. The manual is excellent, explaining the program's setup and functions clearly and thoroughly. It not only tells you what the program can do and how to do it, but it also gives pros and cons for choosing different options. A good index would be very helpful, however. When I came across a couple of things in the program that didn't seem clear in the manual, I got quick and direct help from the company's technical support.

I wholeheartedly recommend ImageFinder to anyone who works with graphics. It not only successfully tracks stored images, but working with it is like using a tool that is so well designed you forget you are holding it.

TransWrite QuickWrite

For turning a phrase or two. . .

By Loren Lovhaug, with Frank Hudson

WHERE IS IT written that decent word-processing software has to be expensive or require a computer whose characteristics are measured in megabytes and MIPS? TransWrite ($69.95), the latest upgrade of Transcript from ***Gold Disk***, and ***New Horizons***' QuickWrite ($75), modeled after ProWrite, are out to prove that you can get good productivity value for small change.

Where's the Catch?

Any savvy consumer would naturally be curious about what features might be omitted in exchange for the low cost of each package. While both contain the basic text-editing features, some of the usual Amiga word-processing features are missing. Neither of these text-based programs contains graphics options to print bitmapped Amiga screen fonts or to include IFF pictures within documents.

Besides the absent graphics options, your choice of fonts is limited to those accessible through Preferences, which means no support for proportional fonts like those found in laser printers. Both programs, however, do a good job of controlling the various pitches of fixed-spaced draft and near-letter-quality modes found in dot-matrix printers. Unfortunately, neither allows complex formatting, such as multiple columns of text, footnotes, or interactive table editing.

Because neither TransWrite nor QuickWrite are burdened with lots of bells and whistles, both products run well on modest Amiga systems (512K). They do not require hard disks; in fact, since each comes on a Workbench disk, you can use them on a single-drive Amiga. These products are excellent candidates for multitasking with other applications, especially (by design) with Professional Page (Gold Disk). In addition, because they are text-based rather than graphics-based, it's quick and easy to enter text, even into the middle of large documents with multiple tasks running on an unexpanded Amiga 500.

Parting Company

Despite all of their similarities, TransWrite and QuickWrite are two very divergent products. The key differences lie in their interfaces and approaches to formatting documents. TransWrite is a post-formatted word processor. This means that you tell TransWrite how to control the appearance of your document by adding short mnemonic codes that stand for various formatting directives (e.g., LM for left margin or JR for right justification).

These formatting directives do not affect the on-screen appearance of the text until you print your document (or review it in Preview mode). What you see on screen as you enter and edit text are simply your paragraphs with the text wrapping to the next line unless you signal the end of a paragraph (by pressing the Return key) or reach the right edge of the window. If you resize the window, the text is then automatically adjusted so that each line wraps at the right edge of the window.

TransWrite shows text attributes such as boldface, italics, and underlining on the screen. There is also a non-editable, but fast and accurate, screen Preview mode that quickly lets you see how your document will look when printed. One other nice addition is a scrollable, formatting-codes requester that reminds you of the purpose of each formatting code. This allows you to select and insert a code at the beginning of a paragraph by clicking on that directive with the mouse.

QuickWrite, on the other hand, employs a more contemporary approach: When you enter text, the program formats it as you type according to the margins and justification settings currently in effect. You can alter settings via conventional ruler gadgets, ►

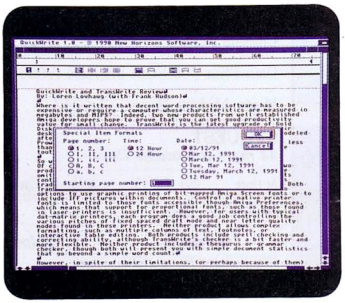
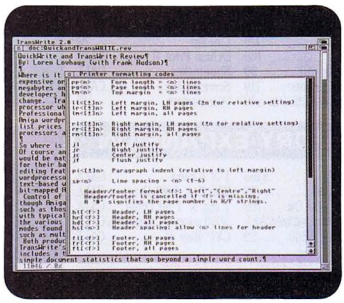
Circle 175 on Reader Service card.



QuickWrite helps keep your place in time.



Your wishes are TransWrite's commands.

pull-down menus, or keyboard shortcuts.

As with TransWrite, QuickWrite displays text attributes such as boldface and italics on screen. Unfortunately, there does not seem to be any way to change text character pitch from inside a QuickWrite document, so you cannot mix pitches within a document.

Unlike TransWrite, page breaks are visible while you edit your text, as are headers and footers. Again, these factors make QuickWrite quite a bit easier to learn and use than TransWrite, because all of your text appears the same on screen as it does on paper.

Although TransWrite is more difficult to learn and use for traditional text formatting and word processing, some advanced and specialized users may prefer it. Despite its spartan appearance, TransWrite has a number of specialty features that make it ideal as a preproduction tool for importing, manipulating, and cleaning up text taken from other sources. For instance, TransWrite's method for dealing with carriage returns and end-of-line characters (a constant scourge of telecommunications and MS-DOS file exchange) is the best found in any Amiga application.

TransWrite's external spell-checking module, which takes advantage of the Amiga's multitasking ability, is not only capable of checking documents on screen (a "real-time," as-you-type option), but also batch-checks files on disk. The program accepts technical or proprietary terms as corrections during a spelling check, although the dictionary does not recognize common contractions.

TransWrite features mail merge, file encryption and decryption for security purposes, and a complete indexing system. Search-and-replace operations are quick—a typical advantage of post-formatted word processors—because the document does not need to be reformatted after each replacement.

Another interesting feature, the automatic text-translation facility, lets ►

AW Shucks!

Item: In last month's article, "The State of 3-D Art," the sidebar on p. 30 featured four screen photos: images rendered by each of the four 3-D packages we covered. Unfortunately, three of the photos were mispositioned with respect to the captions. The picture in the upper left belongs with the LightWave 3D caption, the upper-right photo was actually rendered by Imagine, and the lower-left image is 3D Professional's output. We apologize for the confusion.

Item: In our May review of Magneto/Optical Drives (p. 12), the price of the Ricoh MO9200E was erroneously stated to be $1199. The list price is actually $4199.

CALL FOR ENTERTAINMENT SOFTWARE.

Circle 134 on Reader Service card.

you define multiple translation tables for abbreviations for text or formatting controls. In essence, this feature works like a super batch search-and-replace mode, offering a great deal of potential for defining style sheets and shorthand text entry.

TransWrite is also the first Amiga word processor besides WordPerfect to handle a common nonAmiga word-processor format. It can import and export MS-DOS WordPerfect 4.2 and 5.1 files, as well as Amiga WordPerfect 4.1 files. While the WordPerfect files reside in TransWrite, they show little of the formatting they may have received in WordPerfect. Features that TransWrite does not support, such as table, graphics, and footnotes, are simply not shown at all, which prevents them from being unintentionally modified. There is, however, one serious design flaw to this approach. Although you cannot alter the WordPerfect codes, you can accidentally and unintentionally delete them.

To QuickWrite's credit, it has a few unique features of its own, such as automatically inserting time and date information in a variety of predefined formats. It also has a special page-count feature that allows you to automatically express page numbering in terms of the size of the entire document. For instance, the second page of a document would be expressed as "Page 2 of 10." In addition, QuickWrite includes a very easy-to-use mail-merge facility.

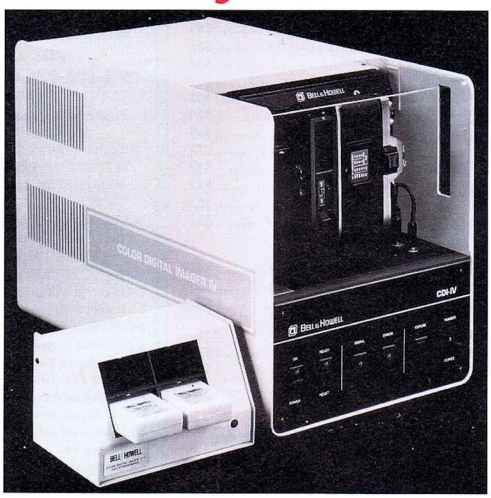
Oddly enough, when it comes to macro support, QuickWrite and TransWrite swap roles somewhat. QuickWrite features a full ARexx port that gives it a great deal of power and potential—provided you take the time to learn how to program ARexx. Conversely, TransWrite's macro facility uses a simple record-and-playback scheme to assign key presses and command invocations (either Amiga key combinations or pull-down menu selections) to function keys. The record-and-playback scheme is much simpler, but is far less powerful than the ARexx implementation that QuickWrite utilizes.

The Final Word

In conclusion, both TransWrite and QuickWrite are low-cost, capable word processors that I can highly recommend, but to two entirely different sets of users. Those looking for a word-processing package that is straightforward, easy to use, and quick to handle traditional text-formatting chores, ought to choose QuickWrite. There is simply no better program for beginners or people with simple requirements who want to get up and running right away.

TransWrite, on the other hand, offers a great deal for telecommunicators, desktop publishers, editors and writers, because of its powerful capability to meet their unique needs. While only people who have had past experience with post-formatted word processors will truly like TransWrite's approach to document formatting, the package really comes into its own when serving as a writer's text editor, divorced from the printing tasks that most word processors are expected to handle. ■

True digital photography for your Amiga computer



Through a special arrangement with Quintar™ Co., Liquid Light is now offering the Bell & Howell CDI-IV™ color digital film recorder for use with all Amiga computer models. The CDI-IV offers true color capability for all your Amiga images including IFF and HAM. All you add is the film and the imagination. Whether you need high quality 35mm slides, instant prints, overhead transparencies or even instant slides the CDI-IV has you covered.

The CDI-IV is shipped to you complete with a 35mm camera, instant print camera, software and cables. Everything you need to produce stunning images is right in the box. It plugs into the serial port of your computer so you can install it in minutes.

The manufacturers suggested retail for this system is $3,995, but for a limited time you can purchase the complete CDI-IV at an introductory price of only **$1,895**. Quantities are limited and this price will last for just a short while.

So give us a call today, With the CDI-IV you'll see your images in a whole new light.

HELP KEY

Whether it's palette problems, sidecars or inexpensive graphic devices, Lou comes up with solutions.

By Louis R. Wallace

Palette Pitfalls

Q: *I've been working on a project in which I rendered a series of images in HAM mode using Sculpt 3D. I converted them all to 32-color mode using Deluxe Photolab, then imported them into Deluxe-Paint III to create an animation. The problem is that they do not all have the same palette! This makes the animation take on the color palette of the last-loaded frame, producing a useless animation. Could I have done anything differently while rendering that would have avoided this problem, or have I just wasted untold hours?*

M. Sherbine
Ridgecrest, Calif.

A: The problem obviously is that Sculpt created each frame with the best possible palette of colors and didn't use the same palette for each frame. Remember that while HAM mode allows a display that uses all 4096 colors at once, it does have its own palette of sixteen unique colors. These sixteen can be placed alongside each other without resorting to the hold-and-modify technique used for the other 4080 colors. During the creation of the image, Sculpt determines which sixteen colors will best serve the needs of the picture, and it creates the sixteen-color palette from that selection. Since you saved each image as a separate file, Sculpt repeated this process for each picture, resulting in images with different palettes. The reason this doesn't happen when you create an animation directly with Sculpt is because it determines the best palette for *all* the images and uses that palette for each frame.

No, your work isn't necessarily ruined. There are a couple of approaches to fixing the problem. One is to use The Animation Station (Progressive Peripherals & Software), which allows you to combine different animations or images into a single animation, optimizing the palette to one that will work best for all the images. Another is to use an image-processing program like Art Department Professional (ASDG) to alter the images so that each has a consistent palette.

Ride in a Sidecar?

Q: *We purchased the Amiga 1000 in 1985 and since that time we have been having an increasingly difficult time finding software for it. We have heard of a "sidecar" that can be used to update the A1000 so it will be more compatible with programs. Would this help us? If so, is it available? The programs we need to use are spreadsheets, graphing and mailing-list software, and even Lotus 123. What can we do?*

S. Honeycutt
Reno, Nevada

A: Whew! It's been a long time since I have heard of the Amiga Sidecar. This was a Commodore expansion box that was developed around 1986 to fulfill two functions. One was to serve as a RAM expansion box, and the other was to offer some form of IBM compatibility in hardware. The product, as far as I know, never shipped in the US, although it did in Canada. I don't believe it is possible to buy one any longer, unless you could find it used.

As for software compatibility, the A1000 is capable of running nearly every piece of software available for the Amiga line of computers. Of course, you must have the proper version of the operating system (usually 1.3), but that is available for the A1000 as well as the A500 and A2000. If you want to make your A1000 hardware more compatible with A2000 hardware products, you could add the Rejuvenator.

Most of the kinds of software you mentioned are available for the Amiga. If you can't find a dealer near you that carries Amiga software, take a look at the mail-order companies who advertise here in *AmigaWorld*. As for Lotus 123, it is an MS-DOS-based software package that is currently not available for the Amiga (although it *can* be used on Amiga 500, 2000 or 3000 computers with the proper MS-DOS hardware emulator).

Low-Cost Color

Q: *I have been experimenting with animation on my Amiga 500 and have become really impressed. Recently, however, a friend of mine showed me some very nice animations on his Mac II that used 256 colors at once. I've heard that there are several new third-party graphic devices out now (or due soon) for the Amiga, but I understand that they all require some very expensive video hardware in order to be used for animations. Is there anyone offering or planning Amiga graphic cards that will allow those of us with smaller wallets to animate in higher resolutions (and more colors)?*

J. Willabee
Fort Worth, Texas

A: There certainly is a very effective solution available. It is DCTV (Digital Creations), a fairly inexpensive (under $500) NTSC display device that allows you to create full-color images and animations using any of 16 million colors. DCTV comes with a powerful paint program as well as digitizing software, so you can scan images in from any still video source, and then edit them with the paint program.

The images can be saved as IFF24 (24-bit IFF image files) or in a proprietary DCTV format that results in a much smaller file. Because it can read in and display 24-bit files saved as IFF24, DCTV is a perfect companion to animation software like Imagine (Impulse), 3DPro (Progressive Peripherals & Software) or even the Video Toaster's LightWave (NewTek).

DCTV can also be used to play real-time animations created by combining DCTV images using existing Amiga software. (To the Amiga, DCTV images are merely high-resolution pictures.) In fact, this DCTV technique was used by IVS at the recent *AmigaWorld* Expo in New York to play digitized movies from a hard disk. ■

The Amiga® Power Up Program. The Most Lopsided Deal Since We Bought Manhattan For $24.

If You Own A Commodore Computer,, It's Worth Up To $1,500* Toward An Amiga 3000.

The Amiga Power Up™ Program rewards Commodore or Amiga owners with up to $1,500 to trade up to a powerful Amiga 3000 computer. Without trading in your current Amiga or Commodore CPU.

If you have a Commodore VIC 20®, 64®, 128™ or Amiga 500, 1000 or 2000 series, save up to:

$1,500 on the Amiga 3000-25/100
$1,250 on the Amiga 3000-25/50
$1,150 on the Amiga 3000-16/50

If you own a Commodore VIC 20, 64, 128, or an Amiga 500, 1000 or 2000 series, write the serial number on the cover of the original owner's manual (no photocopies) and take it to your authorized Commodore dealer. You'll get up to $1,500 off an Amiga 3000 series computer.

The multitasking Amiga 3000 series has it all. 32-bit Motorola 68030 processor. Built-in hard disk control. Interlaced and non-interlaced (31.25 kHz) high resolution video. And four voice two-channel sound.

In fact, Byte Magazine said "Commodore has produced the most complete multimedia platform you can get in a single box."

You also get a one-year limited warranty. Plus the option of on-site Gold Service from CommodoreExpress.**

So hurry to your authorized Commodore dealer before June 30th, 1991. Or call 1-800-66-AMIGA. A deal this good only comes along once every 300 years.

*See chart for qualifying Commodore and Commodore-Amiga CPU's. Subject to dealer participation.Power Up reward based on MSRP. See authorized dealer for details.Not valid in combination with any other promotional offer. Products available on GSA schedule GS-00K-91-AGS-5069. MSRP forAmiga 3000-16/50, $2,999; 25/50, $3,499; 25/100, $4,699.Expires 6/30/91.
**Must be activated by the purchaser.
Commodore VIC 20, 64 and 128 are registered trademarks of Commodore Electronics Ltd. Amiga 500, 1000, 2000 and 3000 series are registered trademarks of Commodore-Amiga, Inc.

Public Domain Library

We are the **Offical Public Domain Library of Antic Amiga Plus**, we have been the **Offical PD library of Amiga World.** Find out why these magazines choose us! Each of our disks are jam packed with only the best programs. The first two letters on each disk indicate the orientation of the disk; DD# intermediate to advanced - often contains source, WB# general interest - most programs can be run from the workbench, and FD# games and entertainment. Order our disk based catalog and receive a coupon for a **complimentary** volume with your next purchase. We always use only SONY disks!

Featured Disk

DD79abcd: Amiga C Programming Tutorial - This is the most comprehensive C language, Amiga orientated set of tutorials available. Includes full working examples, source code and an incredible set of lessons. Included are full discussions and examples of mostAmiga programming topics. Four disk set, counts as three.

New Disks

FD55:Puzzles - Contains TripleYatz, a multiplayer, multigame yatzee clone. Also BoomSquad, an .info best of PD Pick (#39,pg 45), Adventure, Logic, and Mosaic; four very good strategy games.

FD56: Arcade - Includes SpaceWar, an .info "Best of PD" pick (#39, pg 45), HueyRaid a well done helicopter arcade game, and Game - a "GameBoy" emulator with a version of Tetris.

WB87: New Testament - Contains the entire text of the New Testament in a well thought out user interface. 1mb suggested.

WB88abc: The Complete Bible - A three disk set, with the entire text of the New Testament and Torah (Old Testament) includes wb87. 1mb suggested.

WB89:Education- Fish, not your everyday electric eel, but a fun to experiment with simulated fish aquarium. Also contains a well done math quizzer, history, religion, geography and more.

WB90: Rippers, Strippers and Beats - For the Amiga music enthusiast, this disk contains many programs designed strip music from your favorite games and programs. Music can then be played with your favorite PD Music program. Also contains Drums, a very nice drum machine. This disk does require moderate knowledge of the CLI.

WB91:AV Educational - Flags of Europe, beautifully presents all of the flags of Europe along with maps and geographic statistics of the countries. Requires AV.

Other Great Disks!

FD5: Tactical Games - BullRun - a Civil war battle game, Metro - you play the role of a city planner. Build wisely and your system will be a success, but poor planning will lead to disaster and financial ruin. Very very habit forming.

FD6: GAMES! - This disk is chock full of games including; Checkers, Clue, Gold - A new slide the pieces puzzle, Jeopard - An enhanced version of Risk, RushHour - Surprisingly addicting, and SpaceWar - Best described as a cross between Combat-Tanks and asteroids.

FD7: PACMAN - This disk contains several pacman type games including; PacMan87, MazMan and Zonix.

FD9: Moria -. This has great graphic controls, multiple spells, similar to Larn and Hack. Play time several weeks!

FD10: HackLite - A dungeon adventure game. Considered a must-have classic. This is the second release of this game on the Amiga. Great Amiga graphic interface. Play time several weeks!

FD11: Las Vegas and Card Games - Las Vegas Craps - The best Las Vegas Craps simulation every written for any computer. Contains extensive HELP features, Also Thirty-One,VideoPoker and more.

FD12A,FD12B: Star Trek, The Game - This is by far the best Star Trek game ever written for any computer. It features mouse control, good graphics, digitized sound effects and great gameplay. Counts as 2 disks. Req. 1Mb and two drives (or hd).

FD13: Board Games - contains multiplayer Monopoly, Dominoes, Paranoids, and others.

FD14: Dungeon Master Hints and Arcade Games - DM maps, spells, item location, and hints and more, also on this disk, Hball - an arkanoid/breakout type game, Trix - a Qix type clone.

FD17: Educational Games - This disk includes several games for the younger members including geography, math, science, and word games, also includes Wheel of Fortune.

FD20: Tactical Games - MechForce(3.72); A game that simulates combat between two or more giant, robot-like machines. Simple words can't begin to give you the feel of piloting a 30 - 40 foot tall, fire breathing, earth shaking colossus that obeys your every whim.

FD26:Arcade Games - Marble_slide, this is a truly commercial quality game. Similar to a Lucas game named PipeDreams, excellent playability and entertainment, Mutants , a small version of the arcade game of the same name, also SuperBreakout a pong/arkanoids type game.

FD27: Arcade Games - This disk is loaded with some great games. Includes, Raceorama a great racing car game with ten different courses, MiniBlast a helicopter gunship type clone, Shark in the same class as froger, and SBreakout the original breakout with more.

FD29: Shoot'em up's - WWII - you're the pilot of a WWII plane flying through enemy territory, you've just been spotted, good luck on you mission, SpKiller - try and penetrate enemy lines with this game, and Retaliator - another great game.

FD31: Games! - Air Traffic Control - a good ATC simulation game, Black Jack Lab - a full featured set of card games, ChessTel - play chess with your friend in distant and remote places with this game and a modem, labyrnth - a well done text adventure game (like an infocom game), and MouseTrap - a 3d maze game.

FD32:Flight Simulator - Includes an instrument flight simulator for a DC10.

FD33: Arcade Games - Ffreddy a mario brothers type of game, Gerbils a target practice game, PipeLine a German interpretation of Pipe Dreams, Tron a light cycles version, and wetroids a wonderful version of asteroids with a hilarious twist.

FD34: Games - Includes WellTrix a derivative of the addictive game of tetris, and new version of BackGammon. Also included are several new "Schwabie type Hacks".

FD35 Omega (v 1.3) - A new outstanding dungeon and outdoors adventure game in a similar vein as hack, rouge, and moria. This version is considerably faster and better that all previous versions. Play time several weeks or months.

FD37a & b:Tactical Games - Empire (2.2w) This great game comes highly recommended. With a full-featured graphic front end.

FD38:Games - Cribbage Master - A great cribbage game and tutor, Spades - a well done card came, ChineseCheckers - A computer version of this classic, Puzz - a slide piece puzzle game and construction set.

FD39a & b:Tobias Star Trek - This is a new, completely different version of Star Trek than that found on FD12. This one was created by the German author Tobias. Now with English instructions. Very Excellent!!! Counts as two disks. Requires 512k memory, a 500, 2000 or Pal.

FD40:Arcade - MiddleEast - a timely arcade game of death and destruction set in Iraq, BackToTheFutureII - a very playable demo version of this soon to be released commercial game, City - a missile command clone.

FD41:Games - Includes Capital Gains - a stock market game, Ball a Arknoids type of clone with many great twists, and Desert Shield - a search and destroy conquer theme.

FD42:Games - Includes SpaceWar3 - a remake of this original Amiga classic, Trippin - a fascinating board game of intrigue, strategy, and player manipulation, Dominion - an engrossing strategy game of galactic war and conquest, Frog - a frogger type clone, and Mines - a very good strategy board game.

FD44: Game - Mechfight is an out of this world role-playing adventure comparable to hack and moria. The setting, interplanetary colonies and space stations. In your quest to explore the world, take time out to liberate bad guys of their most valuable possessions, engage in a mortal combat or two against robots and alien life forms, pick up a new amiga 9000. Most of all, don't forget to stay alive...

FD45: Arcade - Three good shoot'em ups. Batman - save the city from the Joker, DriveWar - gangsters are moving in on your territory, stop them at all costs, Web - a spidery, buggy affair of eat or be eaten.

FD47: Arcade Games - Contains DownHill - a demanding computer slalom ski game, MicroPac - a Workbench mini-pacman game, CrackOut - a break out clone, Jet - a superb aerial dogfight game, AmegaRace - an interesting asteroids type of game, and WindyDay - a unique arcade shoot'em up.

FD49:Chaos Cheats - This disk contains an everything you wanted to know about cheat set for Chaos Strikes Back, including full maps, spells, object locations, super characters and more.

FD50: Submarine Game - Sealance, one and a half years in the making, this is an outstanding submarine tactical game. Commercial quality, highly recommended.

FD51: Games - DesertStorm a fast action arcade game, Amigatraion a well done concentration game, Chute a parachute jumping game, Running a dungeon adventure game similar to Wanderer, and Solix a solitary card game.

FD52: Classics Games - PetersQuest a well done Mario brothers type of game, Jymbc a two player missile command clone, and Vstank a tank commander game.

FD53: Great Arcade - On this disk is a wonderful implementation of the ever popular classic arcade game Defender. Also contain Air Race a WWII flying ace arcade game, and Psycoblast new creation idea game.

FD54: FoodFight - Contains Galactic FoodFight, a wacky spaced out arcade game loaded with shooting ketchup, and hamburger eating monsters, and flying pizzas.

WB2: General Interest - contains, Galaxy a program that represents the collision of two galaxies, Larn - an adventure/action game similar in concept to rogue or hack, but with a much different feel. Try it, you'll like it!. StarChart - a program that lets you display and identify about 600 stars, galaxies and nebulae visible in the Northern hemisphere.

WB4:Telecommumnication - This disk contains several excellent pd communication programs designed to get you on line quickly and easily, Access (1.42) - A very nice ANSI term program based on Comm v1.34, but with the addition of transfer protocols, Comm (1.34) - Last version of one of the best public domain communications programs ever made on the Amiga, Handshake (2.12a) Handshake is a Full featured VT52/100/102/220

WB5 - Fonts #1- Several fonts (35) for the Amiga, also included are five PageStream fonts,and ShowFont - a font display program.

WB6: Video Fonts #2 - ShowFont(4.0) This program allows you to quickly and painlessly view all 256 characters in a typical font. Large AmigaDos system fonts (many up to 56pts).

WB7: Clip Art - This disk is loaded with black and white clip art. Art includes, trees, watches, tools, US and State maps, and more.

WB9:Icons - Truly a multitude of various types and kinds. Also includes IconMiester, IconLab, and others great utilities to help generate icons.

WB10:Virus Killers - The latest and best VirusX(4.0), Kv(2.1), and ZeroVirus(1.3).

WB11: Business - Clerk(4.0), finally a full featured business accounting PD program for the small to medium company. Includes receivables, payables, end of month and much much more.

WB12: Disk Utilities - This great disk is loaded with wonderful utilities for everything including making disk labels, disk cataloging, disk optimizing, disk and file recovery archive and organizing, and all sorts of file manipulation. A real must have!

WB13: Printer Drivers and Generator - over 70 different drivers, and if these don't do it, with PrtDrvGen you can make your own.

WB14: Video- on this disk are several utilities for the video enthusiast. We have included multiple slates, video titling, Bars and Tone, Gray Scale, Screen fades and swipes, Interface toggles, and SMPTE Calculators .Also on this disk is a full featured video cataloging program.

WB15: Business - This disk contains a spreadsheet, a database, a project/time management program and financial analysis (stocks).

WB16: Business - This disk contains an inventory manager, a loan analysis program, a great calendar/scheduler, a rolodex program, and pennywise a good "Cash Book" accounting for home or office.

WB18: Word/Text Processors - This disk contains the best editors. Includes,TextPlus (v2.2e) a full featured word processor, Dme(v1.35) a great programmers editor with strong macro features,TexED(v2.8) an enhanced Emacs type editor, and a spell checker.

WB20: General Interest - DiskSalv V1.42 a disk recovery program for all Amiga file systems, FixDisk V1.0 another file recovery program with features DiskSalv doesn't have, 3DLookt gives a 3D appearance to your WorkBench, Clean V1.01 a program to de-fragment memory, Tracer - trace any part of an image.

WB22: Fonts #3 - Several more great fonts. These, like the other font disks work great with Dpaint and WYSIWYG word processors.

WB23: Graphics and Plotting - Plot (20b) a three dimensional mathematical function plotter. Can plot any user defined function, BezSurf2 - produce awesome pictures of objects one could turn on a lathe. Can also map iff image files onto any surface that it can draw. Now compatible with most 3D packages, and VScreen - makes a virtual screen anywhere, great for DTP

WB24:Animation and Paint - On this disk, DA a complete commercial quality cell orientated animation package. Movie an "ANIM" player for standard animation. QuickFlix an IFF slide show and cell animation program. Also on this disk are two PD paint programs of good quality.

WB25:Educational - On this disk are two programs that can generate maps of differing types, World Data Base uses the CIA's data base to generate detailed maps of any entered user global coordinates. Also Paradox a great demonstration of Albert Einstein General Theory of Relativity.

WB26: Disk Utilities #2 - MrBackup, KwickBackup - two well done utilities to help with harddisk and floppy disk backups, FileMast - a binary file editor, Labelprinter - Disk label printer with very powerful features.

WB27: Nagel - 26 Patrick Nagel pictures of beautiful women.

WB29: Graphics and Sound - This disk has several different Mandelbrot type programs for generating stunning graphics. Includes, MandelMountains - a realistic terrain generator, Fracgen - generated recursive fractals from user input, Mandelbrot and Tmandel - two fast mandelbrot generators, also Mostra - the best IFF display program to date, will display ALL IFF's including Dynamic HAM, and Sound - a great IFF sound player, will play anything. Try this disk, you'll love it!

WB33:Circuit Board Design - several terrific routines for the electronic enthusiast, Including PCBtool - a circuit board design tool, LogicLab - circuit logic tester, and Mcad (1.26) a well done new release of this PD CAD program, now comes with predrawn common circuit components for insertion into schematics.

WB34: Utilities - Several well done utilities, some will require moderate knowledge of a CLI or Shell for setup, Chatter Box - this one will play any user defined sound after any event (ie. disk insert, mouse click, disk removal...), , Artm - The Amiga real time monitor, gives you full control of the Amiga OS, very powerful program, Helper - help program to make learning the CLI easier, and more!

WB35: 3d Graphics - This disk contains several neat programs to use with your 3d modeling/raytracing programs 3dFonts - Full vector font set for use with 3d programs, FontMaker - make 3d fonts from any system font, Make3DShape - create 3d shapes from any image, DumptoIFF - create 3d animations preserves pallet, and World3d - a demo program of a front end for use with DKBRender.

WB36: Graphics - On this disk are several programs to create stunning graphical images including, MPath - creates swirling galaxy images, Roses - produce an unlimited number of variations of images that a symmetrically similar to a rose, SimGen - display those spectacular images as part of your workbenck screen, and RayShade - a very good raytracing program, create your own beautiful 3d graphics.

Wb37: Educational - Educational games and puzzles that cover math, geography, spelling, and books. Ages 6 - 15

WB38: Plotting and Graphics - Plotxy is the most powerful full featured plotting package. Used by many colleges and universities. A welcome addition to our library! Highly recommended. Plans - a incredibly well done Computer Aided Drafting program, very full featured. Tesselator - a program that helps generates fantastic looking, recursive M.C. Ecsher type pictures.

WB39: Music - Intuitracker is a German offering of an exquisitely well done program that allows you to play music on your Amiga with CD like controls. Lets you strip out music from your favorite games or others and include them in your music library.

WB40: Music - "CD on a disk", 90 minutes of modern music on this well presented collection.

WB41: Music - MED an incredibly well done, full featured music editor. Create your own stunning music directly on your the Amiga. Similar to SoundTracker but better. Very powerful easy to use program.

WB43:Business - This disk contains AnalytiCalc - probably the most powerful spreadsheet program on the Amiga. A full featured spreadsheet with many features expected in a commercial package. Requires 1.2 MB of memory!

WB46:Clip Art - HighRes clip art with the following motifs - embellishments (borders, dodads ,...), people, and transportation.

Virus

Anti-Virus
Now Only $19.95
☆☆☆☆ , INFO Sep 89

Anti-Virus(c) is not Public Domain

WB48: Clip Art - HighRes clip art with the following motifs - Holidays, music, medical, and misc.

WB49abc:Animation Sampler - On this three disk sampler set (counts as two disks) are some of the best animations that have been created over the last three years. Several examples of "Movie" type animations some with spectacular raytraced reality (coolroby, watch, spigot and egg). Also several european style or "Demo" animation with incredible graphics and outstanding electronic music (akrilight, copersine, doc, dps2010, impact, and logodemo). These truly show off the creative edge of an Amiga!

WB50: Animation - Seven of the best european style animations or "Demos", including - scientific 451, subway (a U.S. entrant, also our favorite), sunride, thrstdemo, tnight, waves, and woow.

WB51: Animation- On this disk are two excellent movie style animations including ShipRotation - a futuristic space ship orbiting a surrealistic world (one of the best), and RV-3 - a dpaintIII anim of a rather wacked out airplane.

WB53:Graphics- The disk contains C-light - The easiest to use raytracing we have seen to date. This one started out life as a full featured commercial product similar to Sculpt3d. Raytracing programs can generate stunning, realistically shaded objects. Also, sMovie - a full featured video text titler similar to ProVideo, Broadcast Titler. Great video scrolling, wipes, special effects, and more...

WB54:Printing - This disk contains several routines to help with the chore of printing. Includes Gothic - Finally a Banner printer for the PD! PrintStudio -a well implemented all-purpose printer-utility with a very comfortable graphic interface and many advanced features, Lila - with ease, print ASCII files to a PostScript printer, and many more.

WB55:Application - XCopyIII - a full featured disk copier, make backups of write protected disks. RoadRoute - find the quickest route from one city to another, highway description included, Diary - a diary program like "Dougy Howard M.D", Cal - a calendar program, Magman - a database tailored to maintain records on articles and publications.

WB57:Animation - This disk has several "Demo" style animations, Including, Blitter, Lolly, Sun5, vertigo, vortex, and xenmorph.

WB59:Business - contains a great, very full featured stock market technical analysis and tracking program, also an appointment calendar, and more.

WB61:Intermediate Utilities - Includes programs to help to drasticaly decrease flicker in interlace and hi-res modes (antiflick), an Atari-st emulator, an eprom programmer, turn your amiga into an eight channel digital data analyzer or ocilloscope, and more.

WB62:Midi Utilities - Several useful midi utilities including, programs to transfer to and from several music programs to midi, a midi sysex handler, a midi recorder with timebase, display midi info, file sequence player, and a few scores.

WB63:Disk Utilities #3 - Several highly recommended programs to aid in removing duplicate files from your hard drive, performing file backups, Binary editing, fast formatting, file recovery, disk track recovery, and forced DISK VALIDATION of corrupt disks.

WB66:Icons #2- Lot's of neat icons. Also, several wonderful programs that to let you create your own icons, modify and manipulate icons and info structures.

WB68:Music Utilities - several good utilities for the Amiga music enthusiast. Includes, Noisetracker - a great music creation program, Sonix2MOD - converts sonix to .mod files which then can be used by noisetracker, soundtraker, and MED, SpeakerSim - a speaker design tool demo, Wondersound is an additive harmonic instrument design tool with a separate envelope design window and 16 relative harmonic strength and phase angle controls.

WB69: Music - This disk has over 90 minutes of classical and modern electronic music for you Amiga.

WB70:Desk Top Pub - Atcp - transfer Macintosh screen fonts, Mac or IBM format .AFM metric files, to Amiga screen fonts and PPage .metric files. With this program open door to the libraries of Adobe and PostScript type!, Calendar - month templates in PS form, Post - a full featured post script file display and print utility.

WB71:C64 Emulation - The A64 Package is a complete, very powerful, Commodore 64 emulator.

WB75: Music - over 100 instruments files (.inst) and sample sound files (.ss) for your music programs.

WB76: Applications - This disk contains Stichery - a often requested knitting design program, Lotto - a rather complete lottery tracking and prediction utility, SSS - this screen capture program can grab almost any screen including games, Today - a personal calender, Tarot - fortune teller, and Grammar - grammar checker.

WB78: AV - On this disk are two Amiga Vision programs (bubbler, sync) written by Lou Wallace, chief technical editor of Amiga World. These programs are marvelous examples of how too's with AV.

WB79: Home & Business Accounting - Includes Ckbacct - the most complete checkbook accounting program going, LCDCalc - this well done calculator has a very large display and operates from the keyboard or mouse, Mileage master - monitor your automobile mileage with this mileage log, Grammar - a grammar checker, and Worldtime - find out what time it is in up to 50 global cities.

WB80:Graphics - Raytracing programs generate absolutely stunning realistic looking planes, rockets, buildings..., and surreal images often consisting of highly polished spheres and objects. 3-D Master is the most powerful EASY-TO-USE of it's kind we have seen to date. This is easily better, and more full featured, than similar commercial programs costing in the hundreds of dollars.

WB81: Great Applications - DataEasy a very easy to use, database program. Don't let the ease of use fool you, this is a very full featured database program including full printer control for address labels and mail merge applications. Also includes, TypeTut a good typing tutor, RLC a full featured label printer, Banner, a multi-font banner maker, and Budget a home accounting in a program. Highly recommended.

WB82:Animations - Four full length, well done "movie" style animations. Including, Coyote, JugglerII, GhostPool, and Mechanix. Two disk set, counts as one!

WB83: Computer Art - this disk has some of the best Amiga generated computer art that we have collected in the past 5 years.

WB85: Graphics - Contains several programs for manipulating 24 Bit color images (ham-e) and a rather nice Iff Image processing package.

WB86: Amiga Vision - Contains the Centurion Press, An Amiga newspaper by Lou Wallace.

DD45: AREXX PROGRAMS - This disk contains several useful arexx programs and examples, PopCLI4 - The latest of a must have utility.

DD47: Pascal - This disk contains everything needed to program in Pascal. Includes, A68k (1.2) 68000 assembler, Blink linking software and PCQ (1.0) a modest Pascal sub-set compiler.

DD49: C Compiler - contains zc(1.01) fully K&R, zcc(1.0) front end, A68k(1.2) assembler, Blink linker.

DD50: ARexx #2 - a must have set of tutorials on ARexx and several useful examples and utilities for ARexx development.

DD51: Circuit Analysis - Aspice (2.3) A full featured program for electric circuit analysis.

DD52: Scientific - Includes Elements - an incredibly well done periodic table program with source, Scientific plotting - over 600k of Lattice C source routines that can be included in your own programs.

Protext™

NEW! Version 6.0

Protext is a fully integrated word processing package which combines the features of a word processor, text editor, and a command line interpreter all in one easy to use package.

Protext includes features found only in word processing packages costing several hundred dollars more. Some of these features are:

- Spell checking with word lookup and a user definable dictionary.
- Text pages are automatically formatted as they are entered and formatted.
- Text pages are shown exactly as they are printed.
- Automatic placement of footnotes, headers, footers and page numbering.
- Advanced mail merge facilities.
- The interpreter allows you to perform most desktop functions without leaving *Protext*.
- Macro functions are provided to speed operations of a series of functions.

The Last Word

AW's letters column has changed its name, but still welcomes your kudos and complaints.

Where, Oh Where Is A1000 Support?

After reading the first lines of Bruce Cohen's letter ("Repartee," Mar. '91), I had to skip to the end to be sure it wasn't a letter I myself had penned some time ago. The situation for Amiga 1000 owners has gone beyond mere lack of support. The standard response to my search for information about the A1000 is either disbelief that I still own one or outright laughter. An article (or two or three) covering A1000 upgrade options would be much appreciated.

To Mr. Cohen: You are definitely not alone!

Elizabeth Guffey
Yarmouth, Maine

2.0 Compatibility

As an A3000 owner since last June, I couldn't agree more with Doug Barney's comments on the Amiga 3000 and compatibility issues. I believe your software and hardware reviews should indicate whether the product operates on an A3000 using 2.0. This is especially true for games! It is incredibly frustrating to read a review of a great product and not know if it will run on your machine.

Douglas Nakakihara
Simi Valley, Calif.

Get With It, CBM

I just called Commodore to find out how to get the new ROM chip for my A3000. Their customer-support recording was rattled off so fast that I had to call back twice to catch the other number to call.

When I finally got through to the right number, I was advised that since I bought my computer from Montgomery Grant, I would get no support whatsoever from Commodore. I am apparently supposed to know who is an authorized dealer, who is not, and what the implications are. That stinks! Commodore built it. Commodore should support it!

R. Langley
Colorado Springs, Colo.

A3000 Contest Open to All

O.K., I give up. I just received the April issue in the mail. The first thing that caught my eye was the banner in the upper left-hand corner stating "WIN an AMIGA 3000! See Ad on p. 81." I feverishly turned to page 81 and found only a subscription ad for *AmigaWorld* Tool Chest. I looked left, I looked right, I tore through the entire issue and found nothing even mentioning the 3000. So I gave up. Where was it?

"That stinks! Commodore built it. Commodore should support it!"

Then I went to a local newsstand and *did* find the ad. Is this contest only available to non-subscribers? If so, why? Your subscribers are the heart of the publication. We are hardcore supporters of the Amiga and its various products and publications. Any contest of this kind, if it must be limited, should be limited to the serious readers: the subscribers.

Jeffrey Caulk
Pensacola, Florida

During February, March and April, AmigaWorld *ran a contest that newsstand buyers of all three issues could enter to win an Amiga 3000. Unfortunately, the contest banner appeared by error on the cover of April's subscriber copies, with no further information contained inside the issue. We have received many complaints like Jeffrey Caulk's from subscribers who are justifiably angry, and we have decided to open the contest to subscribers. You must act fast, however, because the deadline is June 15, 1991. To enter, simply send off a 3½ × 5-inch postcard with your name and address to: AmigaWorld Frequent Buyers Sweepstakes, PO Box 802, 80 Elm Street, Peterborough, NH 03458.*

—Editors

The Renaissance Machine

After reading Bryant Hayward's Soapbox essay ("Playing Big Blue's Game," April '91, p. 112), I started thinking about the many times I have seen or heard the Amiga characterized as a game machine, not a business machine. Or a productivity machine, not an educational machine. Or a graphic paint machine, not a desktop-publishing machine. Or whatever. The point is that no matter what you buy an Amiga to do, it does that task well.

So then, why not advertise the Amiga as a serious business computer that also knows how to have fun, that is at once productive and entertaining? After all, variety is the spice of life.

Lance Thompson
Altoona, Iowa

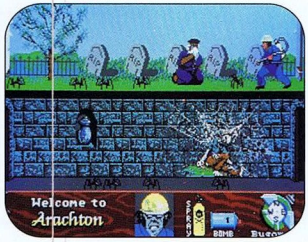
Price of the Tower

In last month's article on the Tower version of the A3000, we were unable to include the price because Commodore had not yet divulged it. They still haven't. As soon as they do, we'll let you know.

—Editors

Send your letters to: The Last Word, *AmigaWorld* Editorial, 80 Elm St., Peterborough, NH 03458. Letters may be edited for space and clarity. ■

If You Were Ever Bitten By A Spider, Here's Your Chance To Get Even.

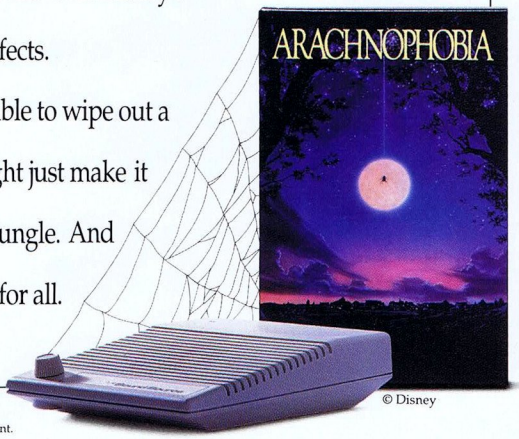


Those killer spiders from the hit horror movie "Arachnophobia" are back. And they're just dying to sink their poisonous fangs into a few more helpless victims.

Match wits with these deadly, highly intelligent creatures. They're hiding, waiting to pounce when you least expect them. Eight levels of difficulty. A variety of anti-spider weaponry. Over 100 locations. Thousands of rooms to explore.

Bring the experience to life with Disney's Sound Source.* Real music, speech and sound effects.

If you're smart enough, quick enough, and able to wipe out a few thousand of the venomous vermin, you might just make it to the final confrontation in the Amazon Jungle. And even the score, once and for all.



Disney
SOFTWARE

*Optional. Sold in combo-packs and separately. Works with IBM and compatible computers only. The speech and sound technology in this product was produced under exclusive license to Walt Disney Computer Software, Inc. by Electronic Speech Systems of Hayward, California. Just The Facts:

What Makes Digi-Paint 3 the Ultimate Paint Program?

"Finding the best paint program for your Amiga can be confusing, but once you have the facts it's simple."

Laura Longfellow
Sales Manager
NewTek Inc.

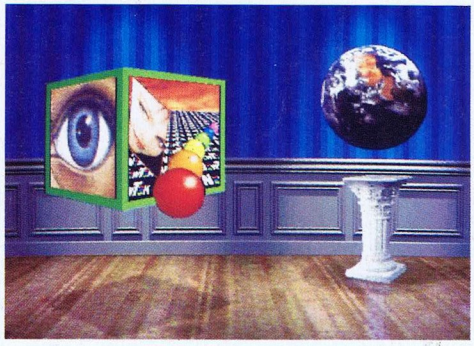
"Why is Digi-Paint 3 better than DeluxePaint III™?"

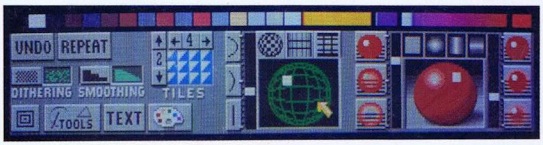
Digi-Paint 3 works in the Amiga's powerful Hold And Modify (HAM) mode, which allows you to paint using all 4096 colors simultaneously. By comparison, Deluxe Paint III (by Electronic Arts) operates in less sophisticated modes, restricting you to a maximum of only 64 colors. Advanced features available in Digi-Paint 3 – including Colorizing, Variable Transparency, Shading, Lighten, Darken and Range Painting – are simply not possible in Deluxe Paint III due to its 64 color limitation. AMIGAWORLD warns, "Competitors may want to head back to the drawing board, because Digi-Paint 3 is hard to beat!"

"What makes Digi-Paint 3 better than other HAM paint programs?"

Digi-Paint 3 is the only Amiga paint program written in 100% assembly language. Although challenging to program (taking up to 10 times longer than other computer languages), it's the only way to achieve the incredible speed found in Digi-Paint 3. AMIGAWORLD calls it "the fastest HAM paint program yet" and AMIGA SENTRY estimates it's, "6-10 times faster" than the nearest contender.

Other advanced features found *only* in Digi-Paint 3 include: anti-aliased texture mapping, anti-aliased fonts, ARexx support, 1024 x 1024 super bitmaps with auto-scrolling and dithering to 30 bits per pixel (over a billion colors internally, giving you tens of thousands of apparent colors). COMPUTER SHOPPER magazine reports "Digi-Paint 3 is without a doubt the most advanced HAM paint program to date!"





"But is Digi-Paint 3 easy to use?"

I've learned that no matter how powerful a program is, if it's not friendly it's not worth my time. We designed Digi-Paint 3 with all users in mind – from the beginner just starting out with computers, to the "power user" who demands the most advanced features possible. The spiral-bound manual contains a step-by-step Guided Tour, 11 hands-on tutorials, a color coded reference card, and almost one hundred example photos.

Digi-Paint 3's intuitive user interface was created by Digi-View designer (and NewTek Founder) Tim Jenison and renowned Amiga artist Jim Sachs. It features innovative "Dashboard" controls which AMIGAWORLD regards as "a joy to use" and "very easy to learn and understand". INFO MAGAZINE says the new interface "looks great and works logically".

"What is the Transfer 24 program included with Digi-Paint 3?"

Transfer 24 is a separate program disk included in the Digi-Paint 3 package, allowing you to alter any picture's brightness, color saturation, contrast, hue and sharpness, almost as easily as adjusting the controls on your television set. Transfer 24 also lets you modify the size, palette, and resolution of any picture. These powerful features, known as "Image Processing", give you incredible control over your final artwork. You can also save your image in any of the Amiga's 24 resolution modes (up to 768x480) making it compatible with all Amiga graphics software. AX MAGAZINE notes that "Transfer 24 gives you even more options as to the final appearance of your work". AMIGAWORLD declares, "Transfer 24 is great for making overall changes."

"What technical support does NewTek offer?"

Digi-Paint 3 has one other thing you won't find in any ordinary paint program: a toll-free help line. If you should have any questions while using Digi-Paint 3, you're not on your own. Call NewTek's technical support team at 1-800-736-7617 Monday through Friday, 8 am -7 pm Central Time.

Digi-Paint 3 is available now at your local Amiga dealer or call **1-800-843-8934** or **1-913-354-1146.**
